1 Introduction

1.1. Scope of the Document

This document presents the AT Commands Set for Quectel cellular engine MC60.

1.2. AT Command Syntax

The "**AT**" or "at" prefix must be set at the beginning of each command line. To terminate a command line enter **<CR>**. Commands are usually followed by a response that includes "**<CR><LF>**" esponse **<CR><LF>**". Throughout this document, only the responses are presented, "**<CR><LF>**" are omitted intentionally.

The AT Commands Set implemented by MC60 is a combination of GSM07.05, GSM07.07 and ITU-T recommendation V.25ter as well as the AT commands developed by Quectel.

All these AT commands can be split into three categories syntactically: "**basic**", "**S parameter**", and "**extended**". They are listed as follows:

Basic syntax

These AT commands have the format of "AT<x><n>", or "AT&<x><n>", where "<x>" is the command, and "<n>" is/are the argument(s) for that command. An example of this is "ATE<n>", which tells the DCE whether received characters should be echoed back to the DTE according to the value of "<n>". "<n>" is optional and a default will be used if it is missing.

• S parameter syntax

These AT commands have the format of "**ATS**<*n*>=<*m*>", where "<*n*>" is the index of the **S** register to set, and "<*m*>" is the value to assign to it.

• Extended syntax

These commands can be operated in several modes, as following table:

Table 1: Types of AT Commands and Responses

Test Command	AT+< <i>x></i> =?	This command returns the list of parameters and value ranges set by the corresponding Write Command or internal processes.
Read Command	AT+ <x>?</x>	This command returns the currently set value of the parameter or parameters.
Write Command	AT+ <x>=<></x>	This command sets the user-definable parameter values.
Execution Command	AT+ <x></x>	This command reads non-variable parameters affected by internal processes in the GSM engine.

1.2.1. Combining AT Commands on the Same Command Line

You can enter several AT commands on the same line. In this case, you do not need to type the "**AT**" or "**at**" prefix before every command. Instead, you only need to type "**AT**" or "**at**" at the beginning of the command line. Please note that use a semicolon as command delimiter.

The command line buffer can accept a maximum of 256 characters. If the input characters exceeded the maximum then no command will be executed and TA will return "ERROR".

1.2.2. Entering Successive AT Commands on Separate Lines

When you need to enter a series of AT commands on separate lines, please note that you need to wait the final response (for example OK, CME error, CMS error) of the last AT command you entered before you enter the next AT command.

1.3. Supported Character Sets

The MC60 AT command interface defaults to the GSM character set. The MC60 supports the following character sets:

- GSM
- UCS2
- HEX
- IRA
- PCCP437
- 8859-1

The character set can be configured and interrogated using the **AT+CSCS** command (GSM 07.07). The character set is defined in GSM specification 07.05. The character set affects transmission and reception

of SMS and SMS Cell Broadcast Messages, as well as the entry and display of phone book entries text field and (U)SIM Application Toolkit alpha strings.

1.4. Flow Control

Flow control is very important for correct communication between the GSM engine and the DTE. In cases such as a data or fax call, the sending device is transferring data faster than the receiving side ready to accept. When the receiving buffer reaches its capacity, the receiving device should be able to cause the sending device to pause until it catches up.

There are basically two approaches to achieve data flow control: software flow control and hardware flow control. MC60 supports both two kinds of flow control.

In multiplex mode, it is recommended to use the hardware flow control.

The default flow control approach of MC60 is disabled.

1.4.1. Software Flow Control (XON/XOFF Flow Control)

Software flow control sends different characters to stop (XOFF, decimal 19) and resume (XON, decimal 17) data flow. It is quite useful in some applications that only use three wires on the serial interface.

The default flow control approach of MC60 is disabled. To enable software flow control in the DTE interface and within GSM engine, type the following AT command:

AT+IFC=1,1<CR>

This setting is stored in volatile memory, for use after restart. **AT+IFC=1,1<CR>** should be stored to the user profile with **AT&W<CR>**.

Ensure that all communication software packages (e.g. ProComm Plus, Hyper Terminal or WinFax Pro) use software flow control.

NOTE

Software Flow Control should not be used for data calls where binary data will be transmitted or received (e.g. TCP/IP), because the DTE interface may interpret binary data as flow control characters.

1.4.2. Hardware Flow Control (RTS/CTS Flow Control)

The default flow control approach of MC60 is disabled. To enable hardware flow control (RTS/CTS flow control) in the DTE interface and within GSM engine, type the following AT command:

AT+IFC=2,2<CR>

This setting is stored volatile, for use after restart. **AT+IFC=2,2<CR>** should be stored to the user profile with **AT&W<CR>**.

Hardware flow control achieves the data flow control by controlling the RTS/CTS line. When the data transfer is suspended, the CTS line is set inactive until the transfer from the receiving buffer has been completed. When the receiving buffer is ready to receive more data, CTS goes active once again.

To achieve hardware flow control, ensure that the RTS/CTS lines are available on your application platform.

1.5. Unsolicited Result Codes

A URC is a report message sent from the ME to the TE. An unsolicited result code can be delivered automatically when an event occurs, reflect changes in system state, or act as the result of a query the ME received before. It is often delivered due to occurrences of errors in executing the queries. However, a URC is not issued as a direct response to an executed AT command. AT commands have their own implementations to validate inputs such as **OK** or **ERROR**.

Typical URCs may be information about incoming calls, received SMS, changing temperature, status of the battery, etc. A summary of URCs is listed in *Chapter 16.6*.

When sending a URC, the ME activates its Ring Interrupt (Logic "I"), i.e. the line goes active low for a few milliseconds. If an event which delivers a URC coincides with the execution of an AT command, the URC will be output after command execution has been completed.

2 General Commands

2.1. ATI Display Product Identification Information

ATI Display Product Identificatio	n Information
Execution Command	Response
ATI	TA returns a product information text.
	Quectel_Ltd
	<object id=""></object>
	Revision: <revision></revision>
	ОК
Maximum Response Time	300ms
Reference	
V.25ter	

Parameter

<object id=""></object>	Identifier of device type
<revision></revision>	Identification text of product software version

Example

ATI

2.2. AT+GMI Request Manufacturer Identification

AT+GMI Request Manufacturer Identification	
Test Command	Response
AT+GMI=?	ОК
Execution Command	Response
AT+GMI	TA reports one or more lines of information text which permits
	the user to identify the manufacturer.
	Quectel_Ltd
	<object id=""></object>
	Revision: MTK 0828
	ОК
Maximum Response Time	300ms
Reference	
V.25ter	

Parameter

<Object Id> Identifier of device type

2.3. AT+GMM Request TA Model Identification

AT+GMM Request TA Model Identification	
Test Command	Response
AT+GMM=?	ОК
Execution Command	Response
AT+GMM	TA returns a product model identification text.
	<object id=""></object>
	ОК
Maximum Response Time	300ms
Reference	
V.25ter	

<Object Id> Identifier of device type

2.4. AT+GMR Request TA Revision Identification of Software Release

AT+GMR Request TA Revision Identification of Software Release	
Test Command	Response
AT+GMR=?	ОК
Execution Command	Response
AT+GMR	TA reports one or more lines of information text which permits
	the user to identify the revision of software release.
	Revision: <revision></revision>
	ОК
Maximum Response Time	300ms
Reference	
V.25ter	

Parameter

<revision></revision>	Identification text of product software version

Example

AT+GMR Revision: MC60CAR01A01

OK

2.5. AT+GOI Request Global Object Identification

AT+GOI Request Global Object Identification	
Test Command	Response
AT+GOI=?	ОК
Execution Command	Response
AT+GOI	TA reports one or more lines of information text which permits

	the user to identify the device, based on the ISO system for registering unique object identifiers. <object id=""></object>
	ОК
Maximum Response Time	300ms
Reference	
V.25ter	

<Object Id> Identifier of device type

NOTE

See X.208, 209 for the format of **<Object Id>**. For example, in MC60 module, string "MC60" is displayed.

2.6. AT+CGMI Request Manufacturer Identification

AT+CGMI Request Manufacturer	Identification
Test Command	Response
AT+CGMI=?	OK
Execution Command	Response
AT+CGMI	TA returns manufacturer identification text.
	Quectel_Ltd
	<object id=""></object>
	Revision: MTK 0828
	ОК
Maximum Response Time	300ms
Reference	
GSM 07.07	

Parameter

<Object Id> Identifier of device type

2.7. AT+CGMM Request Model Identification

AT+CGMM Request Model Identification	
Test Command	Response
AT+CGMM=?	OK
Execution Command	Response
AT+CGMM	TA returns product model identification text.
	<object id=""></object>
	OK
Maximum Response Time	300ms
Reference	
GSM 07.07	

Parameter

<Object Id> Identifier of device type

2.8. AT+CGMR Request TA Revision Identification of Software Release

AT+CGMR Request TA Revision Identification of Software Release	
Test Command	Response
AT+CGMR=?	ОК
Execution Command	Response
AT+CGMR	TA returns product software version identification text.
	Revision: <revision></revision>
	ОК
Maximum Response Time	300ms
Reference	
GSM 07.07	

Parameter

<revision>

Identification text of product software version

2.9. AT+GSN Request International Mobile Equipment Identity (IMEI)

AT+GSN Request International Mobile Equipment Identity (IMEI)	
Test Command	Response
AT+GSN=?	ОК
Execution Command	Response
AT+GSN	TA reports the IMEI (International Mobile Equipment Identity)
	number in information text which permits the user to identify
	the individual ME device.
	<sn></sn>
	ОК
Maximum Response Time	300ms
Reference	
V.25ter	

Parameter

<sn></sn>	IMEI of the ME

NOTE

The serial number (IMEI) varies with the individual ME device.

2.10. AT+CGSN Request Product Serial Number Identification

The command returns International Mobile Equipment Identity (IMEI) number of ME. It is identical with **AT+GSN**.

AT+CGSN Request Product Serial Number Identification	
Test Command AT+CGSN=?	Response OK
Execution Command AT+CGSN	Response <sn></sn>
	ОК
Maximum Response Time	300ms

Reference	
GSM 07.07	

<sn></sn>	IMEI of the ME				
NOTE					

The serial number (IMEI) varies with the individual ME device.

2.11. AT+QGSN Request Product Serial Number Identification

AT+QGSN Request Product Serial Number Identification	
Test Command	Response
AT+QGSN=?	ОК
Execution Command	Response
AT+QGSN	+QGSN: <sn></sn>
	ОК
Maximum Response Time	300ms
Reference	

Parameter

<sn>

A string parameter which indicates the IMEI of the ME

NOTE

The serial number (IMEI) varies with the individual ME device.

Example

AT+QGSN

//Query the IMEI

+QGSN: "865734020000749"

ΟΚ

2.12. AT&F Set All Current Parameters to Manufacturer Defaults

AT&F Set All Current Parameters to Manufacturer Defaults		
Execution Command AT&F[<value>]</value>	Response TA sets all current parameters to the manufacturer defined profile. OK	
Maximum Response Time	300ms	
Reference V.25ter		

Parameter

<value></value>	0	Set all TA parameters to manufacturer defaults
NOTE		
The command resets AT command settings to their factory default values. However, it does not change		
the current baud rate of UART.		UART.

2.13. AT&V Display Current Configuration

AT&V Display Current Configuration	
Execution Command AT&V[<n>]</n>	Response TA returns the current parameter setting. ACTIVE PROFILE <current configurations="" text=""> OK</current>
Maximum Response Time	300ms
Reference V.25ter	

Parameter

<n> 0 Profile number

AT&V or AT&V0	
AT&V

2.14. AT&W Store Current Parameters to User Defined Profile

AT&W Store Current Parameters to User Defined Profile		
Execution Command AT&W[<n>]</n>	Response TA stores the current parameter setting in the user defined profile. OK	
Maximum Response Time	300ms	
Reference V.25ter		

Parameter

	<n></n>	0	Profile number to store current parameters
-			
ſ	NOTE		
U	The profile d	lafinad by	user is stored in pervelatile memory

The profile defined by user is stored in nonvolatile memory.

2.15. ATQ Set Result Code Presentation Mode

ATQ Set Result Code Presentation Mode		
Execution Command	Response	
ATQ[<n>]</n>	This parameter setting determines whether or not the TA	
	transmits any result code to the TE. Information text	

	transmitted in response is not affected by this setting.
	If <n>=</n> 0:
	ОК
	lf <n>=</n> 1:
	(none)
Maximum Response Time	300ms
Reference	
V.25ter	

<n></n>	<u>0</u>	TA transmits result code
	1	Result codes are suppressed and not transmitted

2.16. ATV TA Response Format

ATV TA Response Format	
Execution Command ATV[<value>]</value>	Response This parameter setting determines the contents of the header and trailer transmitted with result codes and information responses. When <value>=</value> 0 0 When <value>=</value> 1 OK
Maximum Response Time	300ms
Reference V.25ter	

Parameter

<value></value>	0	Information response: <text><cr><lf></lf></cr></text>
		Short result code format: <numeric code=""><cr></cr></numeric>
	<u>1</u>	Information response: <cr><lf><text><cr><lf></lf></cr></text></lf></cr>
		Long result code format: <cr><lf><verbose code=""><cr><lf></lf></cr></verbose></lf></cr>

NOTE

The result codes, their numeric equivalents and brief descriptions of the use of each are listed in the following table.

Example

//Set <value>=1</value>
//When <value></value> =1, the result code is OK
//Set <value>=</value> 0
//When <value></value> =0, the result code is 0

Table 3: ATV0&ATV1 Result Codes Numeric Equivalents and Brief Descriptions

ATV1	ATV0	Description
OK	0	Acknowledges execution of a command
CONNECT	1	A connection has been established; the DCE is moving from command mode to data mode.
RING	2	The DCE has detected an incoming call signal from network.
NO CARRIER	3	The connection has been terminated or the attempt to establish a connection is failed.
ERROR	4	Command not recognized, command line maximum length exceeded, parameter value invalid, or other problem with processing the command line
NO DIALTONE	6	No dial tone detected
BUSY	7	Engaged (busy) signal detected
NO ANSWER	8	"@" (Wait for Quiet Answer) dial modifier was used, but remote ringing followed by five seconds of silence was not detected before expiration of the connection timer (S7)
PROCEEDING	9	An AT command is being processing

CONNECT <text> Manufacturer-specific

Same as **CONNECT**, but includes manufacturerspecific text that may specify DTE speed, line speed, error control, data compression, or other status

2.17. ATX Set CONNECT Result Code Format and Monitor Call Progress

ATX Set CONNECT Result Code	Format and Monitor Call Progress
Execution Command	Response
ATX[<value>]</value>	This parameter setting determines whether or not the TA detected the presence of a dial tone or busy signal, and whether or not the TA transmits particular result codes. OK
Maximum Response Time	300ms
Reference V.25ter	

Parameter

0	CONNECT result code returned only. Dial tone and busy signal detection are
	both disabled.
1	CONNECT <text> result code returned only. Dial tone and busy signal</text>
	detection are both disabled.
2	CONNECT <text> result code returned. Dial tone detection is enabled, while</text>
	busy signal detection is disabled.
3	CONNECT <text> result code returned. Dial tone detection is disabled, while</text>
	busy signal detection is enabled.
<u>4</u>	CONNECT <text> result code returned. Dial tone and busy signal detection</text>
	are both enabled.
	1 2 3

NOTES

- 1. If parameter is omitted, the command has the same behavior as **ATX0**.
- 2. The factory default **<value>** is 4.

2.18. ATZ Set All Current Parameters to User Defined Profile

ATZ Set All Current Parameters to User Defined Profile	
Execution Command ATZ[<value>]</value>	Response TA sets all current parameters to the user defined profile. OK
Maximum Response Time	300ms
Reference V.25ter	

Parameter

<value></value>	0	Reset to profile number 0
-----------------	---	---------------------------

NOTES

- 1. The command restores the current AT command settings to the user defined profile in non-volatile memory, if there were stored with **AT&W** before.
- 2. Any additional AT commands on the same command line are ignored.
- 3. The command will not change the current baud rate of UART.
- 4. If the user profile is invalid, it will default to the factory default profile.

2.19. AT+CFUN Set ME Functionality

AT+CFUN Set ME Functionality	
Test Command	Response
AT+CFUN=?	+CFUN: (list of supported <fun>s), (list of supported <rst>s)</rst></fun>
	ОК
Read Command	Response
AT+CFUN?	+CFUN: <fun></fun>
	ОК
Write Command	Response
AT+CFUN= <fun>[,<rst>]</rst></fun>	ОК
	If there is any error related to ME functionality:
	+CME ERROR: <err></err>

Maximum Response Time	15s, determined by network.
Reference GSM 07.07	

<fun></fun>	0	Minimum functionality
	<u>1</u>	Full functionality (Default)
	4	Disable the ME from both transmitting and receiving RF signals
<rst></rst>	<u>0</u>	Do not reset the ME before setting it to <fun> power level</fun>
		This is default when <rst></rst> is not given
	1	Reset the ME before setting it to <fun> power level</fun>

Example

AT+CFUN=0 +CPIN: NOT READY	//Switch the ME to minimum functionality
OK AT+COPS?	//Not registered to any energies
+COPS: 0	//Not registered to any operator
OK AT+CPIN?	
+CME ERROR: 13	//(U)SIM failure
AT+CFUN=1 OK	//Switch the ME to full functionality
+CPIN: SIM PIN AT+CPIN=1234 +CPIN: READY	
ок	
Call Ready AT+CPIN? +CPIN: READY	
OK AT+COPS? +COPS: 0,0,"CHINA MOBILE"	//Registered to an operator
ОК	

2.20. AT+QPOWD Power off

AT+QPOWD Power off	
Write Command	Response
AT+QPOWD= <n></n>	When <n></n> =0
	OK
	When <n></n> =1
	NORMAL POWER DOWN
Maximum Response Time	300ms
Reference	

Parameter

<n></n>	0	Urgent power off (Do not send out URC NORMAL POWER DOWN)
	1	Normal power off (Send out URC NORMAL POWER DOWN)

Example

AT+QPOWD=0	
ОК	//Urgent power off: returns OK
AT+QPOWD=1	
NORMAL POWER DOWN	//Normal power off: sends out URC NORMAL
	POWER DOWN

2.21. AT+CMEE Report Mobile Equipment Error

AT+CMEE Report Mobile Equipment Error	
Test Command AT+CMEE=?	Response +CMEE: (list of supported <n>s)</n>
Read Command AT+CMEE?	OK Response +CMEE: <n></n>
	ОК
Write Command AT+CMEE=[<n>]</n>	Response TA disables or enables the use of result code +CME ERROR: <err></err> as an indication of an error related to the functionality of

	the ME. OK
Maximum Response Time	300ms
Reference GSM 07.07	

<n></n>	0	Disable result code
	<u>1</u>	Enable result code and use numeric values
	2	Enable result code and use verbose values

Example

AT+CMEE=0	//Disable result code
ОК	
AT+CPIN=1234	
ERROR	//Only ERROR will be displayed
AT+CMEE=1	//Enable error result code with numeric values
ОК	
AT+CPIN=1234	
+CME ERROR: 10	
AT+CMEE=2	//Enable error result code with verbose (string)
	values
ОК	
AT+CPIN=1234	
+CME ERROR: SIM not inserted	

2.22. AT+CSCS Select TE Character Set

AT+CSCS Select TE Character Set	
Test Command	Response
AT+CSCS=?	+CSCS: (list of supported <chset>s)</chset>
	OK
Read Command	Response
AT+CSCS?	+CSCS: <chset></chset>
	OK
Write Command	Response

AT+CSCS= <chset></chset>	Set character set <chset></chset> which is used by the TE. The TA can then convert character strings correctly between the TE and ME character sets. OK
Maximum Response Time	300ms
Reference GSM 07.07	

<chset></chset>	"GSM"	GSM default alphabet
	"HEX"	Character strings consist only of hexadecimal numbers from 00 to FF
	"IRA"	International reference alphabet
	"PCCP437"	PC character set code
	"UCS2"	UCS2 alphabet
	"8859-1"	ISO 8859 Latin 1 character set

Example

AT+CSCS? +CSCS: "GSM"	//Query the current character set	
OK AT+CSCS="UCS2" OK AT+CSCS? +CSCS: "UCS2"	//Set the character set to "UCS2"	
ок		

2.23. AT+GCAP Request Complete TA Capabilities List

AT+GCAP Request Complete TA Capabilities List	
Test Command	Response
AT+GCAP=?	ОК
Execution Command	Response
AT+GCAP	TA reports a list of additional capabilities.
	+GCAP: <name></name>
	OK

Maximum Response Time	300ms
Reference V.25ter	

<name></name>	GSM function is supported
	S FAX function is supported

3 Serial Interface Control Commands

3.1. AT&C Set DCD Function Mode

AT&C Set DCD Function Mode	
Execution Command AT&C[<value>]</value>	Response This parameter determines how the state of circuit 109 (DCD) relates to the detection of received line signal from the distant end. OK
Maximum Response Time Reference V.25ter	300ms

Parameter

<value></value>	0	DCD (data carrier detection) function is always ON
	<u>1</u>	DCD (data carrier detection) function is ON only in the presence of data carrier

3.2. AT&D Set DTR Function Mode

AT&D Set DTR Function Mode	
Execution Command AT&D[<value>]</value>	Response This parameter determines how the TA responds when circuit 108/2 (DTR) is changed from low to high level during data mode. OK
Maximum Response Time Reference	300ms
V.25ter	

<value></value>	0	TA ignores status on DTR.
	1	Low \rightarrow High on DTR: Change to command mode while remaining the connected call.
	<u>2</u>	Low \rightarrow High on DTR: Disconnect data call and change to command mode. When DTR
		is in high level, auto-answer function is disabled.

3.3. AT+ICF Set TE-TA Control Character Framing

AT+ICF Set TE-TA Control Chara	cter Framing
Test Command AT+ICF=?	Response +ICF: (list of supported <format>s), (list of supported <parity>s) OK</parity></format>
Read Command AT+ICF?	Response +ICF: <format>,<parity> OK</parity></format>
Write Command AT+ICF= <format>[,<parity>]</parity></format>	Response This parameter setting determines the serial interface character framing format and parity received by TA from TE. OK
Maximum Response Time	300ms
Reference V.25ter	

Parameter

<format></format>	1	8 data 0 parity 2 stop
	2	8 data 1 parity 1 stop
	<u>3</u>	8 data 0 parity 1 stop
	4	7 data 0 parity 2 stop
	5	7 data 1 parity 1 stop
	6	7 data 0 parity 1 stop
<parity></parity>	0	Odd
	1	Even
	2	Mark
	<u>3</u>	Space

NOTES

- 1. The command is applied for command mode.
- 2. The **<parity>** field is ignored if the **<format>** field specifies no parity.

3.4. AT+IFC Set TE-TA Local Data Flow Control

AT+IFC Set TE-TA Local Data Flo	w Control
Test Command AT+IFC=?	Response +IFC: (list of supported <dce_by_dte>s),(list of supported</dce_by_dte>
	<dte_by_dce>s)</dte_by_dce>
Read Command	Response
AT+IFC?	+IFC: <dce_by_dte>,<dte_by_dce></dte_by_dce></dce_by_dte>
	ОК
Write Command	Response
AT+IFC= <dce_by_dte>,<dte_by_dce></dte_by_dce></dce_by_dte>	This parameter setting determines the data flow control on
	the serial interface for data mode.
	ОК
Maximum Response Time	300ms
Reference	
V.25ter	

Parameter

<dce_by_dte></dce_by_dte>	Specifies the method that will be used by TE when receiving data from TA		
	<u>0</u>	None	
	1	XON/XOFF	
	2	RTS flow control	
<dte_by_dce></dte_by_dce>	Specifies the method that will be used by TA when receiving data from TE		
	<u>0</u>	None	
	1	XON/XOFF	
	2	CTS flow control	

Example

OK .	
OK	

AT+IFC?

+IFC: 2,2

οκ

3.5. AT+ILRR Set TE-TA Local Data Rate Reporting Mode

AT+ILRR Set TE-TA Local Data Rate Reporting Mode		
Test Command	Response	
AT+ILRR=?	+ILRR: (list of supported <value>s)</value>	
	ОК	
Read Command	Response	
AT+ILRR?	+ILRR: <value></value>	
	ОК	
Write Command	Response	
AT+ILRR=[<value>]</value>	This parameter setting determines whether or not an	
	intermediate result code of local rate is reported when the	
	connection is established. The rate is applied after the final	
	result code of the connection is transmitted to TE.	
	OK	
Maximum Response Time	300ms	
Reference		
V.25ter		

Parameter

<value></value>	<u>0</u>	Disable reporting of local port rate
	1	Enable reporting of local port rate

NOTE

If the **<value>** is set to 1, the following intermediate result will come out on connection to indicate the port rate settings.

+ILRR:<rate>

Port rate setting on call connection in Baud per second
300
1200
2400

4800		
9600		
14400		
19200		
28800		
38400		
57600		
115200		

3.6. AT+IPR Set TE-TA Fixed Local Rate

AT+IPR Set TE-TA Fixed Local Rate		
Test Command AT+IPR=?	Response +IPR: (list of supported auto detectable <rate>s),(list of supported fixed-only<rate>s) OK</rate></rate>	
Read Command AT+IPR?	Response +IPR: <rate></rate>	
Write Command AT+IPR= <rate></rate>	Response This parameter setting determines the data rate of the TA on the serial interface. After the delivery of any result code associated with the current command line, the rate set by the command takes effect. OK	
Maximum Response Time	300ms	
Reference V.25ter		

<rate></rate>	Baud rate per second
	<u>0</u> (Autobauding)
	75
	150
	300
	600
	1200

NOTES

- 1. The default configuration of **AT+IPR** is adaptive baud rate enabled (**AT+IPR=0**).
- If a fixed baud rate is set, make sure that both TE (DTE, usually external processor) and TA (DCE, Quectel module) are configured to the same rate. If adaptive baud rate is enabled, the TA could automatically recognize the baud rate currently used by the TE after receiving "AT" or "at" string.
- 3. The value of AT+IPR cannot be restored with AT&F and ATZ, but it is still storable with AT&W and visible in AT&V.
- 4. In multiplex mode, the baud rate cannot be changed by the write command **AT+IPR=<rate>**, and the setting is invalid and not stored even if **AT&W** is executed after the write command.
- 5. A selected baud rate takes effect after the write commands are executed and acknowledged by **OK**.

Example

OK

AT+IPR=115200	//Set fixed baud rate to 115200bps
OK	//Otana automate actions that is the action
AT&W	<pre>//Store current setting, that is, the serial communication speed is 115200bps after restart module</pre>
ОК	
AT+IPR?	
+IPR: 115200	

3.6.1. Adaptive Baud Rate

To take advantage of adaptive baud rate mode, specific attention must be paid to the following requirements:

- 1. Adaptive baud rate synchronization between TE and TA.
 - Ensure that TE and TA are correctly synchronized and the baud rate used by the TE is detected

by the TA. The baud rate can be synchronized simply by use an "**AT**" or "**at**" string. This is necessary after customer activates adaptive baud rate or when customer starts up the module with adaptive baud rate enabled.

- It is recommended to wait for 2 to 3 seconds before sending the first "**AT**" or "**at**" string after the module is started up with adaptive baud rate enabled. Otherwise undefined characters might be returned.
- 2. Restriction on adaptive baud rate operation.
 - The serial interface shall be used with 8 data bits, no parity and 1 stop bit (factory setting).
 - The command "**A**/" can't be used.
 - Only the string "AT" or "at" can be detected (either "AT" or "at").
 - URCs that may be issued before the TA detect a new baud rate by receiving the first AT character, and they will be sent at the previously detected baud rate.
 - If TE's baud rate is changed after TA has recognized the earlier baud rate, loss of synchronization between TE and TA would be encountered and an "AT" or "at" string must be re-sent by TE to regain synchronization on baud rate. To avoid undefined characters during baud rate resynchronization and the possible malfunction of resynchronization, it is not recommended to switch TE's baud rate when adaptive baud rate is enabled. Especially, this operation is forbidden in data mode.
- 3. Adaptive baud rate and baud rate after restarting.
 - In the adaptive baud rate mode, the detected baud rate is not saved. Therefore, resynchronization is required after restarting the module.
 - Unless the baud rate is determined, an incoming CSD call can't be accepted. This must be taken into account when adaptive baud rate and auto-answer mode (ATS0≠0) are enabled at the same time, especially if (U)SIM PIN 1 authentication is done automatically and the setting ATS0≠0 is stored to the user profile with AT&W.
 - Until the baud rate is synchronized, URCs after restarting will not be output when adaptive baud rate is enabled.
- 4. Adaptive baud rate and multiplex mode.If adaptive baud rate is active, it is not recommended to switch to multiplex mode.
- 5. Adaptive baud rate and Windows modem.
 - The baud rate used by Windows modem can be detected while setting up a dial-up GPRS/CSD connection. However, some Windows modem drivers switch TE's baud rate to default value automatically after the GPRS call is terminated. In order to prevent no response to the Windows modem when it happens, it is not recommended to establish the dial-up GPRS/CSD connection in adaptive baud rate mode.
 - Based on the same considerations, it is also not recommended to establish the FAX connection in adaptive baud rate mode for PC FAX application, such as WinFax.

NOTE

To assure reliable communication and avoid any problem caused by undetermined baud rate between DCE and DTE, it is strongly recommended to configure a fixed baud rate and save it instead of using adaptive baud rate after start-up.

3.7. AT+CMUX Multiplexer Control

AT+CMUX Multiplexer Control	
Test Command AT+CMUX=?	Response +CMUX: (list of supported <mode>s),(<subset>s),(<port_ speed>s),(<n1>s),(<t1>s),(<n2>s),(<t2>s),(<t3>s),(<k>s) OK</k></t3></t2></n2></t1></n1></port_ </subset></mode>
Read Command AT+CMUX?	Response +CMUX: <mode>,0,5,127,10,3,30,10,2 OK If there is any error: ERROR</mode>
Write Command AT+CMUX=[<mode>[,<subset>[,<port _speed>[,<n1>[,<t1>[,<n2>[,<t2>[,<t 3>[,<k>]]]]]]]]</k></t </t2></n2></t1></n1></port </subset></mode>	Response OK If there is any error: +CME ERROR: <err></err>

	<u>10</u>
<n2></n2>	Maximum number of re-transmissions
	<u>3</u>
<t2></t2>	Response timer for the multiplexer control channel in a unit of ten milliseconds
	<u>30</u>
<t3></t3>	Wake up response timers in seconds
	<u>10</u>
<k></k>	Window size, for advanced operation with Error Recovery options
	2

NOTES

- 1. Advanced option with Error Recovery options is not supported.
- 2. The multiplexing transmission rate is fixed according to the current serial baud rate. It is recommended to enable multiplexing protocol under 115200bps baud rate.
- 3. Multiplexer control channels are listed as follows:

Channel Number	Туре	DLCI
None	Multiplexer Control	0
1	07.07 and 07.05	1
2	07.07 and 07.05	2
3	07.07 and 07.05	3
4	07.07 and 07.05	4

3.8. AT+QEAUART Configure Dual UART Function

AT+QEAUART Configure Dual U	ART Function
Test Command	Response
AT+QEAUART=?	+QEAUART: (list of supported <mode>s),<debug port=""></debug></mode>
	ОК
Read Command	Response
AT+QEAUART?	+QEAUART: <mode>,<debug port=""></debug></mode>
	OK
	If there is any error:
	ERROR
Write Command	Response
AT+QEAUART= <mode>,<debug port=""></debug></mode>	ОК

	If there is any error related to ME functionality +CME ERROR: <err></err>
Maximum Response Time	300ms
Reference Quectel	

<mode></mode>	<u>0</u>	Disable dual UART function
	1	Enable dual UART function
<mode></mode>	<u>2</u>	UART2 as debug port
	99	No UART port used as debug port

NOTES

- 1. When dual UART function is enabled, the Debug UART port can be used to execute AT commands. About Debug UART port, please refer to *Quectel_MC60_Hardware_Design*.
- 2. The Aux UART port cannot be used to execute data transmission-related AT commands. It is used for modem communication with MC60's embedded GNSS engine.

3.9. AT+QSEDCB Configure Parameters of the Dual UART

AT+QSEDCB Configure Parame	ters of the Dual UART
Test Command AT+QSEDCB=?	Response +QSEDCB: (list of supported <baudrate>s),(list of supported <databits>s),(list of supported <stopbits>s),(list of supported <parity>s) OK</parity></stopbits></databits></baudrate>
Read Command AT+QSEDCB?	Response +QSEDCB: <baudrate>,<databits>,<stopbits>,<parity> OK If there is any error: ERROR</parity></stopbits></databits></baudrate>
Write Command AT+QSEDCB= <baudrate>,<databits>, <stopbits>,<parity></parity></stopbits></databits></baudrate>	Response OK If there is any error related to ME functionality:

	+CME ERROR: <err></err>
Maximum Response Time	300ms

	2		
	3		
<parity></parity>	Parit	/	
	<u>0</u>	None	
	1	Odd	
	2	Even	
	3	Mark	

NOTES

- 1. This command can be saved by **AT&W**.
- 2. When dual UART port function is enabled, the **AT+QSEDCB** command will be executed successfully; otherwise it will return an error.

4 Status Control Commands

4.1. AT+CEER Extended Error Report

AT+CEER Extended Error Report		
Test Command	Response	
AT+CEER=?	ОК	
Execution Command	Response	
AT+CEER	TA returns an extended report of the reason for the last call	
	release.	
	+CEER: <locationid>,<cause></cause></locationid>	
	ОК	
Maximum Response Time	300ms	
Reference		
GSM 07.07		

Parameter

<locationid></locationid>	Location ID as number code. Location IDs are listed in <i>Table 12</i> .
	Each ID is related with another table that contains a list of <cause></cause> s.
<cause></cause>	Reason for last call release as number code. The number codes are listed in
	several tables, sorted by different categories. The tables can be found in Chapter
	<i>16.9</i> .

Example

AT+CEER //Query error reporting in normal state, return "No error" +CEER: 0,0 OK ATD10086; OK AT+CLCC +CLCC: 1,0,0,0,0,"10086",129,""

//Established a call and the remote party hangs up the call

//Query error reporting, the <locationID>=1 means "Cause

for protocol stack (PS) layer", <cause>=16 means

"Normal call clearing"

0		
U	n	
_		

NO CARRIER AT+CEER

+CEER: 1,16

ΟΚ

4.2. AT+CPAS Mobile Equipment Activity Status

AT+CPAS Mobile Equipment Act	ivity Status
Test Command	Response
AT+CPAS=?	+CPAS: (list of supported <pas>s)</pas>
	ОК
Execution Command	Response
AT+CPAS	TA returns the activity status of ME.
	+CPAS: <pas></pas>
	ОК
	If there is any error related to ME functionality:
	+CME ERROR: <err></err>
Maximum Response Time	300ms
Reference	
GSM 07.07	

Parameter

<pas></pas>	0	Ready
	2	Unknown (ME is not guaranteed to respond to instructions)
	3	Ringing
	4	Call in progress or call hold

Example

+CPAS: 0

//The module is idle

OK ATD10086; OK AT+CLCC +CLCC: 1,0,3,0,0,"10086",129,""	
OK <mark>AT+CPAS</mark> +CPAS: 3	//An incoming call is ringing
OK <mark>AT+CLCC</mark> +CLCC: 1,0,0,0,0,"10086",129,""	
OK AT+CPAS +CPAS: 4	//Call in progress
ок	

4.3. AT+QINDRI RI Indication When Using URC

AT+QINDRI RI Indication When U	Jsing URC
Test Command	Response
AT+QINDRI=?	+QINDRI: (list of supported <status>s)</status>
	ОК
Read Command	Response
AT+QINDRI?	+QINDRI: <status></status>
	ОК
Write Command	Response
AT+QINDRI= <status></status>	OK
	If there is any error:
	ERROR
Maximum Response Time	300ms
Reference	
Quectel	

4.4. AT+QMOSTAT Show State of Mobile Originated Call

AT+QMOSTAT Show State of Mo	bile Originated Call
Test Command	Response
AT+QMOSTAT=?	+QMOSTAT: (list of supported <mode>s)</mode>
	or
	OK
Read Command	Response
AT+QMOSTAT?	+QMOSTAT: <mode></mode>
	ок
Write Command	Response
AT+QMOSTAT= <mode></mode>	ОК
	ERROR
Maximum Response Time	300ms
Reference	
Quectel	

Parameter

<mode></mode>	<u>0</u>	Do not show call state of mobile originated call
	1	Show call state of mobile originated call. After dialing call numbers, the URC string
		of MO RING will be sent if the called party is alerted; and the URC string of MO
		CONNECTED will be sent if the call is established

Example

AT+QMOSTAT=1 OK ATD10086; OK	//Show call state of mobile originated call
MORING	//The called party is alerted
MO CONNECTED	//The call is established

4.5. AT+QREFUSECS Refuse to Receive SMS/Incoming Call or Not

AT+QREFUSECS Refuse to Rece	eive SMS/Incoming Call or Not
Test Command AT+QREFUSECS=?	Response +QREFUSECS: (list of supported <refuse_sms>s)[,(list of supported <refuse_call>s)] OK</refuse_call></refuse_sms>
Read Command AT+QREFUSECS?	Response +QREFUSECS: <refuse_sms>,<refuse_call> OK</refuse_call></refuse_sms>
Write Command AT+QREFUSECS= <refuse_sms>[,<ref use_call>]</ref </refuse_sms>	Response OK If there is any error: ERROR
Maximum Response Time	300ms
Reference Quectel	

Parameter

<refuse_sms></refuse_sms>	0	Receive the new SMS
	1	Refuse to receive the new SMS
<refuse_call></refuse_call>	<u>0</u>	Receive the incoming call
	1	Refuse to receive the incoming call

4.6. AT+QIURC Enable or Disable Initial URC Presentation

AT+QIURC Enable or Disable Initial URC Presentation	
Test Command	Response
AT+QIURC=?	+QIURC: (list of supported <mode>s)</mode>
	OK
Read Command	Response
AT+QIURC?	+QIURC: <mode></mode>
	ОК

Write Command	Response
AT+QIURC= <mode></mode>	OK
	If there is any error:
	ERROR
Maximum Response Time	300ms
Reference	
Quectel	

<mode></mode>	0	Disable URC presentation
	<u>1</u>	Enable URC presentation

NOTE

When the module powers on and initialization procedure is over. URC **Call Ready** will be presented if **<mode>** is 1.

4.7. AT+QEXTUNSOL Enable/Disable Proprietary Unsolicited

Indications

AT+QEXTUNSOL Enable/Disable	Proprietary Unsolicited Indications
Test Command	Response
AT+QEXTUNSOL=?	+QEXTUNSOL: (list of supported <extunsol>s)</extunsol>
	ОК
Write Command	Response
AT+QEXTUNSOL= <exunsol>,<mode></mode></exunsol>	ΟΚ
	If there is any error:
	ERROR
Maximum Response Time	300ms
Reference	
Quectel	

<extunsol> String type. Values currently reserved by the present document

- "SQ" Signal Quality Report. Displays signal strength and channel bit error rate (similar to **AT+CSQ**) in form **+CSQN: <rssi>, <ber>** when values change.
- "FN" Forbidden network available only. When returning to a non-registered state, this indicates whether all the available PLMNs are forbidden.
- "MW" SMS Message waiting. On receiving an SMS (as indicated by the **+CMTI** indication) the SMS is decoded and checked to see if it contains one or more of the message waiting indications (i.e. voicemail, email, fax, etc.). If so, an unsolicited indication is shown in the form for each message type:

+QMWT: <store>,<index>,<voice>,<fax>,<email>,<other>, where <store> is the message store containing the SM; index is the message index and <voice>; <email>, <fax>, <other> contain the number of waiting messages (with '0' defined as clear indication, non-zero for one or more waiting messages) or blank for not specified in this message.

- "UR" Unsolicited result code. Produces an unsolicited indication in the following call state transition. Multiple notifications may occur for the same transition **+QGURC:** <event>, where <event> describes the current call state: <event>:
 - 0 Terminated active call, at least one held call remaining
 - 1 Attempt to make an Mobile Originated Call
 - 2 Mobile Originated Call has failed for some reason
 - 3 Mobile Originated Call is ringing
 - 4 Mobile Terminated Call is queued (Call waiting)
 - 5 Mobile Originated Call now has been connected
 - 6 Mobile Originated or Mobile Terminated Call has been disconnected
 - 7 Mobile Originated or Mobile Terminated Call is hung up.
 - 8 Mobile Originated Call dialed a non-emergency number in emergency mode
 - 9 No answer for Mobile Originated Call
 - 10 Remote number busy for Mobile Originated Call
- "BC" Battery Charge. Displays battery connection status and battery charge level (similar to **AT+CBC**) in form **+CBCN: <bcs>,<bcl>** when values change.
- "BM" Band mode. Displays band mode (similar to **AT+QBAND**) in form **+QBAND**: **<band>** when value changes.
- "SM" Additional SMS Information. Displays additional information about SMS events in the form of unsolicited messages of the following format **+TSMSINFO: <CMS** error info> where **<CMS error info>** is a standard CMS error in the format defined by the **AT+CMEE** command i.e. either a number or a string.
- "CC" Call information. Displays the disconnected call ID and the remaining call numbers after one of the calls is disconnected. +CCINFO: <Call id disconnected>,<Remain calls>

<mode> 0 Disable

1 Enable 2 Query

4.8. AT+QINISTAT Query State of Initialization

AT+QINISTAT Query State of Initialization	
Test Command	Response
AT+QINISTAT=?	ОК
Execution Command	Response
AT+QINISTAT	+QINISTAT: <state></state>
	OK
Maximum Response Time	300ms
Reference	
Quectel	

Parameter

<state></state>	0	No initialization	
	1	Ready to execute AT command	
	2	Phonebook has finished initialization	
	3	SMS has finished initialization	

NOTE

When **<state>** is 3, it also means initialization of (U)SIM card related functions has been finished.

4.9. AT+QNSTATUS Query GSM Network Status

AT+QNSTATUS Query GSM Netw	vork Status
Test Command	Response
AT+QNSTATUS=?	ОК
Execution Command	Response
AT+QNSTATUS	+QNSTATUS: <status></status>
	ОК

	If there is any error related to ME functionality: +CME ERROR: <err></err>
Maximum Response Time	300ms
Reference	
Quectel	

<status></status>	255	Not ready to retrieve network status	
	0	Work in normal state	
	1	No available cell	
	2	Only limited service is available	

4.10. AT+QNITZ Network Time Synchronization

AT+QNITZ Network Time Synchronization		
Test Command	Response	
AT+QNITZ=?	+QNITZ: (list of supported <enable>s)</enable>	
	ОК	
Read Command	Response	
AT+QNITZ?	+QNITZ: <enable></enable>	
	ОК	
Write Command	Response	
AT+QNITZ= <enable></enable>	ОК	
	If there is any error related to ME functionality:	
	+CME ERROR: <err></err>	
Maximum Response Time	300ms	
Reference		
Quectel		

<enable></enable>	<u>0</u>	Disable to synchronize time from GSM network
	1	Enable to synchronize time from GSM network
If the function is enabled, on receiving network time message, an unsolicited indic		nction is enabled, on receiving network time message, an unsolicited indication
	is showr	n in the format of: +QNITZ: <time>,<ds></ds></time>

<time></time>	String type value. Format is "yy/MM/dd,hh:mm:ss±zz,ds", where characters indicate year
	(two last digits), month, day, hour, minutes, seconds and time zone (indicates the
	difference, expressed in quarters of an hour, between the local time and GMT; range:
	-47+48). E.g. 6th of May 2004, 22:10:00 GMT+2 hours equals to "04/05/06,22:10:00+08"
<ds></ds>	Daylight Saving Time. When it is zero, the format will be "04/05/06,22:10:00+08,0"

NOTE

This function needs support of local GSM network. And the unsolicited also can be read by **AT+QLTS** command later.

4.11. AT+QLTS Obtain Latest Network Time Synchronized

AT+QLTS Obtain Latest Network	Time Synchronized
Test Command	Response
AT+QLTS=?	ОК
Execution Command AT+QLTS	Execution Command returns the latest time for network synchronization. Response +QLTS: <time>,<ds></ds></time>
	OK If there is any error related to ME functionality: +CME ERROR: <err></err>
Maximum Response Time	300ms
Reference	
Quectel	

<time></time>	String type value. Format is "yy/MM/dd,hh:mm:ss±zz", where characters indicate year (two
	last digits), month, day, hour, minutes, seconds and time zone (indicates the difference,
	expressed in quarters of an hour, between the local time and GMT; range: -47+48). E.g.
	6th of May 2004, 22:10:00 GMT+2 hours equals to "04/05/06,22:10:00+08"
<ds></ds>	Daylight Saving Time. When it is zero, the format will be "04/05/06,22:10:00+08,0"

4.12. AT+CTZU Network Time Synchronization and Update the RTC

Time

AT+CTZU Network Time Synchronization and Update the RTC Time		
Test Command	Response	
AT+CTZU=?	+CTZU: (list of supported <mode>s)</mode>	
	ОК	
Read Command	Response	
AT+CTZU?	+CTZU: <mode></mode>	
	ОК	
Write Command	Response	
AT+CTZU= <mode></mode>	ОК	
	If there is any error related to ME functionality:	
	+CME ERROR: <err></err>	
Maximum Response Time	300ms	
Reference		

Parameter

<mode></mode>	0	Disable automatic update RTC time via NITZ.
	1	Update network synchronized time to RTC and save time zone into NVRAM.
	2	Update GMT time with time zone to RTC, save time zone into NVRAM, and ignore
		daylight saving time.
	<u>3</u>	Update localized time and time zone to RTC, and save time zone into NVRAM.
	4	Same with <mode></mode> =2

NOTE

This function needs support of local GSM network. After setting the **AT+CTZU**, the value will be automatically saved into flash. After the module is restarted, it can also take effect.

4.13. AT+CTZR Network Time Synchronization Report

AT+CTZR Network Time Synchronization Report		
Test Command	Response	
AT+CTZR=?	+CTZR: (list of supported <mode>s)</mode>	
	OK	
Read Command	Response	
AT+CTZR?	+CTZR: <mode></mode>	
	ОК	
Write Command	Response	
AT+CTZR= <mode></mode>	ОК	
	If there is any error related to ME functionality:	
	+CME ERROR: <err></err>	
Maximum Response Time	300ms	
Reference		

Parameter

<mode></mode>	<u>0</u>	Disable time zone change event reporting
	1	Enable time zone change event reporting by unsolicited result code +CTZV: <tz></tz>
	2	Enable extended time zone reporting by unsolicited result code
		+CTZE: <tz>,<dst>,[<time>]</time></dst></tz>

NOTE

This function needs support of local GSM network. After setting the **AT+CTZU**, the value will be automatically saved into flash. The function takes effect after the module is restarted.

4.14. AT+QSIMDET Enable/Disable (U)SIM Card Detection

AT+QSIMDET Enable/Disable (U)SIM Card Detection	
Test Command	Response
AT+QSIMDET=?	+QSIMDET: (list of supported <enable>s),(list of supported</enable>
	<insert_level>s),(list of supported <pin_choice>s)</pin_choice></insert_level>

	ОК
Read Command	Response
AT+QSIMDET?	+QSIMDET: <enable>,<insert_level>,<pin_choice></pin_choice></insert_level></enable>
	ОК
Write Command	Response
AT+QSIMDET= <enable>,<insert_level< td=""><td>ОК</td></insert_level<></enable>	ОК
>, <pin_choice></pin_choice>	
	If there is any error related to ME functionality:
	+CME ERROR: <err></err>
Maximum Response Time	300ms
Reference	

<enable> Enable/Disable (U)SIM card detection function</enable>	
	0 Disable
	1 Enable
<insert_level></insert_level>	Configure Pin level when (U)SIM card is inserted
	0 Low level
	1 High level
<pin_choice></pin_choice>	Configure (U)SIM card detection pin
	<u>0</u> Configure SIM_PRESENCE as (U)SIM card detection pin
	1 Configure DTR as (U)SIM card detection pin

NOTES

- 1. This command can be saved by **AT&W**.
- The pin of SIM_PRESENCE and DTR are multiplexed in MC60, and MC60 only supports DTR pin as (U)SIM card detection pin. If turning on the (U)SIM card detection function, it is recommended to set <pin_choice> to 1.

4.15. AT+QSIMSTAT (U)SIM Inserted Status Reporting

AT+QSIMSTAT (U)SIM Inserted Status Reporting	
Test Command	Response
AT+QSIMSTAT=?	+QSIMSTAT: (list of supported <enable>s)</enable>

	ОК
Read Command	Response
AT+QSIMSTAT?	+QSIMSTAT: <enable>,<insert_status></insert_status></enable>
	ОК
Write Command	Response
AT+QSIMSTAT= <enable></enable>	ОК
	If there is any error related to ME functionality:
	+CME ERROR: <err></err>
Maximum Response Time	300ms
Reference	

<pre><enable> Enable or disable (U)SIM card insertion status report. If it is enabled, when (U)SIM card</enable></pre>		
removed or inserted, the URC +QSIMSTAT: <enable>,<insert_status> will be repor</insert_status></enable>		d or inserted, the URC +QSIMSTAT: <enable>,<insert_status> will be reported.</insert_status></enable>
	<u>0</u>	Disable
	1	Enable
<insert_status></insert_status>		(U)SIM card is inserted or removed.
	0	Removed
	1	Inserted

NOTE

This command can be saved by AT&W.

4.16. AT+QCGTIND Circuit Switched Call or GPRS PDP Context

Termination Indication

Circuit Switched Call or GPRS PDP Context Termination Indication	
esponse	
QCGTIND: (list of supported <n>s)</n>	
K	
e	

Read Command AT+QCGTIND?	Response +QCGTIND: <n></n>
	ОК
Write Command	Response
AT+QCGTIND= <n></n>	OK
	If there is any error related to ME functionality: +CME ERROR: <err></err>
Maximum Response Time	300ms
Reference Quectel	

<n></n>	A numeric parameter which indicates whether to enable an unsolicited event code indicating		
	whether a circuit switched voice call, circuit switched data call or GPRS session has been		
	terminated		
	<u>0</u>	Disable	
	1	Enable	
<type></type>	Connection type		
	0	Circuit switched voice call	
	1	Circuit switched data call	
	2	PPP connection	

NOTE

When enabled, an unsolicited result code **+QCGTIND:** <**type>** is returned after the connection has been terminated.

Example

ATD10086; OK +QCGTIND: 0 //A circuit switched voice call has been terminated NO CARRIER

5 (U)SIM Related Commands

5.1. AT+CIMI Request International Mobile Subscriber Identity (IMSI)

AT+CIMI Request International Mobile Subscriber Identity (IMSI)		
Test Command	Response	
AT+CIMI=?	ОК	
Execution Command	Response	
AT+CIMI	TA returns <imsi> for identifying the individual (U)SIM which</imsi>	
	is attached to ME.	
	<imsi></imsi>	
	OK	
	If there is any error related to ME functionality:	
	+CME ERROR: <err></err>	
Maximum Response Time	300ms	
Reference		
GSM 07.07		

Parameter

<IMSI> International Mobile Subscriber Identity (string without double quotes)

Example

AT+CIMI

460023210226023

//Query IMSI number of (U)SIM which is attached to ME

ΟΚ

5.2. AT+CLCK Facility Lock

AT+CLCK Facility Lock		
Test Command	Response	
AT+CLCK=?	+CLCK: (list of supported <fac>s)</fac>	
	ОК	
Write Command	Response	
AT+CLCK= <fac>,<mode>,<passwd>[,</passwd></mode></fac>	This command is used to lock, unlock or interrogate the ME or	
<class>]</class>	the network facility <fac></fac> . Password is normally needed to perform such actions. When querying the status of a network service (<mode>=</mode> 2) the response line for 'not active' case (<status>=</status> 0) should be returned only if service is not active for any <class></class> .	
	If <mode></mode> is not equal to 2 and the command is set successfully:	
	ОК	
	If <mode>=2 and the command is set successfully: +CLCK: <status>[,<class1>[<cr><lf></lf></cr></class1></status></mode>	
	+CLCK: <status>, class2]]</status>	
	ОК	
Maximum Response Time	5s	
Reference GSM 07.07		

<fac></fac>	"PS"	PH-SIM (lock Phone to (U)SIM card) (ME asks password when other than the
		current (U)SIM card inserted; ME may remember certain amount of previously
		used cards thus not requiring password when they are inserted)
	"SC"	(U)SIM (lock (U)SIM card) ((U)SIM asks password in ME power-up and when this
lock		command is issued)
	"AO"	BAOC (Bar All Outgoing Calls) (refer to GSM02.88[6] clause 1)

	7	All telephony except SMS (Default)
	8	Short message service
	16	Data circuit sync
	32	Data circuit async
<status></status>	0	Off
	1	On

Example

AT+CLCK="SC", 2 +CLCK: 0	//Query the status of (U)SIM card lock: unlock
OK AT+CLCK="SC",1,"1234" OK	//Lock the (U)SIM card, and the password is 1234
AT+CLCK="SC",2 +CLCK: 1	//Query the status of (U)SIM card lock: lock
OK AT+CLCK="SC",0,"1234" OK	//Unlock the (U)SIM card

5.3. AT+CPIN Enter PIN

AT+CPIN Enter PIN	
Test Command	Response
AT+CPIN=?	ОК
Read Command	Response
AT+CPIN?	TA returns an alphanumeric string indicating whether or not
	some password is required.
	+CPIN: <code></code>
	OK
Write Command	Response
AT+CPIN= <pin>[,<new pin="">]</new></pin>	TA stores a password, such as (U)SIM PIN, (U)SIM PUK,
	PH-SIM PIN, etc., which is necessary before it can be
	operated. If the PIN is to be entered twice, the TA shall automatically repeat the PIN. If no PIN request is pending, no action is taken and an error message +CME ERROR is returned to TE.
	If the PIN required is (U)SIM PUK or (U)SIM PUK2, the second pin is required. This second pin <new pin=""></new> is used to replace the old pin in the (U)SIM.
	ОК
Maximum Response Time	5s
Reference	
GSM 07.07	

<code></code>	READY	No further entry needed
	SIM PIN	ME is waiting for (U)SIM PIN
	SIM PUK	ME is waiting for (U)SIM PUK
	PH_SIM PIN	ME is waiting for phone to (U)SIM card (antitheft)
	PH_SIM PUK	ME is waiting for (U)SIM PUK (antitheft)
	SIM PIN2	PIN 2, e.g. it is possible to edit the FDN book only if preceding command
		was acknowledged with +CME ERROR: 17
	SIM PUK2	Possible only if preceding command was acknowledged with error
		+CME ERROR: 18
<pin></pin>	String type; password	
<new pin=""></new>	String type; if the	e PIN required is (U)SIM PUK or (U)SIM PUK2: new password

Example

+CPIN: READY	

5.5. AT+CRSM Restricted (U)SIM Access

AT+CRSM Restricted (U)SIM Access		
Test Command	Response	
AT+CRSM=?	ОК	
Write Command	Response	
AT+CRSM= <command/> [, <fileid>[,<p< td=""><td>+CRSM: <sw1>,<sw2>[,<response>]</response></sw2></sw1></td></p<></fileid>	+CRSM: <sw1>,<sw2>[,<response>]</response></sw2></sw1>	
1>, <p2>,<p3>[,<data>]]]</data></p3></p2>		
	ОК	
	If there is any error:	
	ERROR	
	+CME ERROR: <err></err>	
Maximum Response Time	300ms	
Reference		
GSM 07.07		

<command/>	176	READ BINARY	
	178	READ RECORD	
	192	GET RESPONSE	
	214	UPDATE BINARY	
	220	UPDATE RECORD	
	242	STATUS	
	All othe	er values are reserved; refer to GSM 11.11	
<fileid></fileid>	Integer	type. This is the identifier for an elementary data file on (U)SIM. Mandatory for	
	every o	command except STATUS.	
<p1>,<p2>,<p3< td=""><td>> Integer</td><td>type. Parameters passed on by the ME to the (U)SIM. These parameters are</td></p3<></p2></p1>	> Integer	type. Parameters passed on by the ME to the (U)SIM. These parameters are	
	manda	tory for every command, except GET RESPONSE and STATUS. The values	
	are des	scribed in GSM 11.11.	
<data></data>	Information which shall be written to the (U)SIM (hexadecimal character format)		
<sw1>,<sw2></sw2></sw1>	Integer type. Information from the (U)SIM about the execution of the actual command.		
	These	parameters are delivered to the TE in both cases, on successful or failed	
	execut	ion of the command.	
<response></response>	Respo	nse of a successful completion of the command previously issued (hexadecimal	
	charac	ter format). STATUS and GET RESPONSE return data, which gives information	
	about t	he current elementary data field. This information includes the type of file and its	
	size (re	efer to GSM 11.11). After READ BINARY or READ RECORD command the	

requested data will be returned. The parameter is not returned after a successful UPDATE BINARY or UPDATE RECORD command.

Example

AT+CRSM=242

+CRSM: 145, 211, "00000007F10020000000000A13000C0400838A808A"

ΟΚ

//<**sw1>**=145, <**sw2>**=211, "00000007F1002000000000 A13000C0400838A808A" is the content which is returned from (U)SIM card (refer to *GSM 11.11*)

5.6. AT+CSIM Generic (U)SIM Access

AT+CSIM Generic (U)SIM Access	5	
Test Command	Response	
AT+CSIM=?	ОК	
Write Command	Response	
AT+CSIM= <length>,<command/></length>	+CSIM: <length>,<response></response></length>	
	OK	
	If there is any error:	
	ERROR	
	+CME ERROR: <err></err>	
Maximum Response Time	300ms	
Reference		
GSM 07.07		

<length></length>	Integer type. The length of characters sent to the TE in <command/> or <response></response> (i.e.
	two times of octets in the raw data).
<command/>	String type (string should be included in quotation marks);
	Hex format: GSM11.11 (U)SIM Command sent from the ME to the SIM
<response></response>	String type (string should be included in quotation marks);
	Hex format: GSM11.11 (U)SIM Command sent from the (U)SIM to <command/>

5.7. AT+QCSPWD Change PS Super Password

AT+QCSPWD Change PS Super	Password
Test Command	Response
AT+QCSPWD=?	ОК
Write Command	Response
AT+QCSPWD= <oldpwd>,<newpwd></newpwd></oldpwd>	ОК
	If there is any error:
	ERROR
Maximum Response Time	300ms
Reference	
Quectel	

Parameter

<oldpwd></oldpwd>	String type. Old password and length should be 8 bytes.
<newpwd></newpwd>	String type. New password and length should be 8 bytes.

NOTES

- 1. Default value of **<oldpwd>** is "12345678".
- 2. If the module is locked to a specific (U)SIM card through **AT+CLCK** and the password is lost or (U)SIM state is PH-SIM PUK, then the super password can be used to unlock it.

5.8. AT+CCID Show CCID

AT+CCID Show CCID	
Test Command	Response
AT+CCID=?	OK
Execution Command	Response
AT+CCID	+CCID: <ccid data=""></ccid>
	ОК
Maximum Response Time	300ms
Reference	
Quectel	

<ccid data> CCID number for the current (U)SIM card.

Parameter

<ccid data> CCID number for the current (U)SIM card.

Example

AT+CCID +CCID: "898600220909A0206023"	//Query CCID of the (U)SIM card
ОК	

5.9. AT+QCCID Show CCID

AT+QCCID Show CCID	
Test Command	Response
AT+QCCID=?	OK
Execution Command	Response
AT+QCCID	<ccid data=""></ccid>
	ОК
Maximum Response Time	300ms
Reference	
Quectel	

Parameter

<ccid data> CCID number for the current (U)SIM card.

Example

AT+QCCID

//Query CCID of the (U)SIM card

898600220909A0206023

OK

5.10. AT+QGID Get (U)SIM Card Group Identifier

AT+QGID Get (U)SIM Card Group	o Identifier
Execution Command AT+QGID	Response +QGID: <gid1> <gid2></gid2></gid1>
	ОК
	If there is any error:
	ERROR
Maximum Response Time	300ms
Reference	
Quectel	

Parameter

<gid1></gid1>	Integer type of (U)SIM card group identifier 1
<gid2></gid2>	Integer type of (U)SIM card group identifier 2

NOTE

If the (U)SIM supports GID files, the GID values are retuned. Otherwise **0xff** is retuned.

5.11. AT+QSIMVOL Select (U)SIM Card Operating Voltage

AT+QSIMVOL Select (U)SIM Card	d Operating Voltage
Test Command	Response
AT+QSIMVOL=?	+QSIMVOL: (list of supported <mode>s)</mode>
	ОК
Read Command	Response
AT+QSIMVOL?	+QSIMVOL: <mode></mode>
	ОК
Write Command	Response
AT+QSIMVOL= <mode></mode>	ОК
	If there is any error:

	ERROR +CME ERROR: <err></err>
Maximum Response Time	300ms
Reference	
Quectel	

<mode></mode>	<u>0</u>	Recognize 1.8V and 3.0V (U)SIM card (Default)
	1	Recognize 1.8V (U)SIM card only
	2	Recognize 3.0V (U)SIM card only

NOTE

AT+QSIMVOL can take effect only when the command is set successfully and after the module is restarted.

5.12. AT+QSPN Get Service Provider Name from (U)SIM

AT+QSPN Get Service Provider Name from (U)SIM		
Read Command AT+QSPN?	Response +QSPN: (<spn>s), (list of supported <display mode="">s)</display></spn>	
	ОК	
	If there is any error related to ME functionality: +CME ERROR: <err></err>	
Maximum Response Time	300ms	
Reference Quectel		

<spn></spn>	String	String type. Service provider name on (U)SIM.	
<display mode=""></display>	<u>0</u>	Do not display PLMN. Already registered on PLMN	
	1	Display PLMN	

NOTE

CME errors are possible if (U)SIM is not inserted.

5.13. AT+QTRPIN Times Remain to Input (U)SIM PIN/PUK

AT+QTRPIN Times Remain to Input (U)SIM PIN/PUK		
Execution Command AT+QTRPIN	Response Times remain to input (U)SIM PIN. +QTRPIN: <chv1>,<chv2>,<puk1>,<puk2></puk2></puk1></chv2></chv1>	
	ОК	
Maximum Response Time	300ms	
Reference		

Parameter

Times remain to input CHV1
Times remain to input CHV2
Times remain to input PUK1
Times remain to input PUK2

5.14. AT+QDSIM Dual (U)SIM Switching

AT+QDSIM Dual (U)SIM Switching		
Test Command	Response	
AT+QDSIM=?	+QDSIM: (list of supported <simslot>),</simslot>	
	ОК	
Read Command	Response	
AT+QDSIM?	+QDSIM: <simslot></simslot>	
	ОК	
Write Command	Response	
AT+QDSIM= <simslot></simslot>	ОК	

	If there is any error: ERROR
Maximum Response Time	300ms
Reference Quectel	

<simslot></simslot>	<u>0</u>	Switch to (U)SIM card 1
	1	Switch to (U)SIM card 2

NOTE

MC60 supports Dual SIM Single Standby function, and this command is used for switching between the two (U)SIM cards.

6 Network Service Commands

6.1. AT+COPS Operator Selection

AT+COPS Operator Selection	
Test Command AT+COPS=?	Response TA returns a list of quadruplets, each representing an operator present in the network. Any of the formats may be unavailable and should then be an empty field. The list of operators shall be in the order of: home network, networks referenced in (U)SIM, and other networks. +COPS: (list of supported <stat>, long alphanumeric <oper>, short alphanumeric <oper>, numeric <oper>s)[,(list of supported <mode>s),(list of supported <format>s)] OK If there is any error related to ME functionality: +CME ERROR: <err></err></format></mode></oper></oper></oper></stat>
Read Command AT+COPS?	Response TA returns the current mode and the currently selected operator. If no operator is selected, <format> and <oper> are omitted. +COPS: <mode>[,<format>[,<oper>]] OK If there is any error related to ME functionality: +CME ERROR: <err></err></oper></format></mode></oper></format>
Write Command AT+COPS= <mode>[,<format>[,<oper >]]</oper </format></mode>	Response TA forces an attempt to select and register on the GSM network operator. If the selected operator is not available, no other operator shall be selected (except <mode></mode> =4). The format of selected operator name shall apply to further read commands (AT+COPS?). OK

	If there is any error related to ME functionality: +CME ERROR: <err></err>
Maximum Response Time	75s, determined by network.
Reference GSM 07.07	

<stat></stat>	0	Unknown
	1	Operator available
	2	Operator current
	3	Operator forbidden
<oper></oper>	Opera	tor in format as per <mode></mode>
<mode></mode>	<u>0</u>	Automatic mode; <oper></oper> field is ignored
	1	Manual operator selection; < oper> field shall be present
	2	Manual deregister from network
	3	Set only <format> (for read command AT+COPS?) - not shown in read</format>
		command response
	4	Manual/automatic selected; if manual selection fails, automatic mode
		(<mode></mode> =0) is entered
<format></format>	<u>0</u>	Long format alphanumeric <oper>; can be up to 16 characters long</oper>
	1	Short format alphanumeric <oper></oper>
	2	Numeric <oper>; GSM Location Area Identification number</oper>

NOTES

1. This write command is used to choose and register the GSM network operator. The setting of **<mode>** allows ME to determine whether automatic or manual network selection shall be used.

- When <mode>=0, the ME searches for the operator which shall be used automatically.
- When <mode>=1, the ME forces to register the selected <oper>. If the <oper> is invalid, the ME remains unregistered; until <mode>=0, the ME can register again. If restart module, the ME is still under <mode>=1 and there is no RPLMN. The ME will also be Not Registered to Network condition, until the mode is changed via the command to automatic registration mode.
- When <mode>=4, if the ME fails to register to this operator, then it starts to select another operator automatically.
- 2. This command setting is saved to NVRAM automatically.

Example

AT+COPS=?

//List all current network operators

+COPS: (2,"CHINA MOBILE","CMCC","46000"),(3,"CHINA UNICOM GSM","UNICOM","46001") ,,(0-4),(0-2)

OK

AT+COPS?

//Query the currently selected network operator +COPS: 0,0,"CHINA MOBILE"

ΟΚ

6.2. AT+CREG Network Registration Status

AT+CREG Network Registration	Status
Test Command AT+CREG=?	Response +CREG: (list of supported <n>s) OK</n>
Read Command AT+CREG?	Response TA returns the status of result code presentation and an integer <stat></stat> which shows whether the network has currently indicated the registration of the ME. Location information elements <lac></lac> and <ci></ci> are returned only when <n>=2</n> and ME is registered in the network. +CREG: <n>,<stat>[,<lac>,<ci>]</ci></lac></stat></n> OK If there is any error related to ME functionality:
Write Command AT+CREG= <n></n>	+CME ERROR: <err> Response TA controls the presentation of an unsolicited result code +CREG: <stat> when <n>=1 and there is a change in the ME network registration status. OK</n></stat></err>
Maximum Response Time Reference GSM 07.07	300ms

<n></n>	0	Disable network registration unsolicited result code
	1	Enable network registration unsolicited result code +CREG: <stat></stat>
	2	Enable network registration unsolicited result code with location information
<stat></stat>	0	Not registered, ME is not currently searching a new network to register on

<ci></ci>	String type; two byte cell ID in hexadecimal format	
	01.1	
<lac></lac>	String type; two byte location area code in hexadecimal format	
	5	Registered, roaming
	4	Unknown
	3	Registration denied
	2	Not registered, but ME is currently searching a new network to register on
	1	Registered, home network

NOTE

Unsolicited result code

If **<n>**=1 and there is a change in the ME network registration status: **+CREG: <stat>**

If <n>=2 and there is a change in the ME network registration status or a change of the network cell: +CREG: <stat>[,<lac>,<ci>]

Example

AT+CREG=1 OK	
+CREG: 1 AT+CREG=2 OK	//URC reports that operator has been found //Activates extended URC mode
+CREG: 1,"1878","0873"	//URC reports that operator has been found with location area code and cell ID

6.3. AT+CSQ Signal Quality Report

AT+CSQ Signal Quality Report	
Test Command AT+CSQ=?	The test command returns values supported by the TA. Response +CSQ: (list of supported <rssi>s),(list of supported <ber>s) OK</ber></rssi>
Execution Command AT+CSQ	The execution command returns received signal strength indication <rssi></rssi> and channel bit error rate <ber></ber> from the ME. Response +CSQ: <rssi>,<ber></ber></rssi>

	ОК
	If there is any error related to ME functionality: +CME ERROR: <err></err>
Maximum Response Time	300ms
Reference GSM 07.07	

<rssi></rssi>	0	-113 dBm or less
	1	-111 dBm
	230	-10953 dBm
	31	-51 dBm or greater
	99	Not known or not detectable
<ber></ber>	(in percent):	
	07	As RXQUAL values in the table in GSM 05.08 subclause 8.2.4
	99	Not known or not detectable

Example

AT+CSQ=? +CSQ: (0-31,99),(0-7,99) OK AT+CSQ +CSQ: 28,0 //The current signal strength indication is 28 and channel bit error rate is 0 OK

6.4. AT+CPOL Preferred Operator List

AT+CPOL Preferred Operator List	
Test Command	Response
AT+CPOL=?	+CPOL: (list of supported <index>s),(list of supported</index>
	<format>s)</format>
	ОК
Read Command	Response

Reference GSM 07.07	

<numericn></numericn>	String type. Operator in numeric format (see AT+COPS)
<alphan></alphan>	String type. Operator in long alphanumeric format (see AT+COPS)

6.6. AT+QBAND Get and Set Mobile Operation Band

AT+QBAND Get and Set Mobile Operation Band	
Test Command	Response
AT+QBAND=?	+QBAND: (list of supported <op_band>s)</op_band>
	ок
Read Command	Response
AT+QBAND?	+QBAND: <op_band></op_band>
	ОК
Write Command	Response
AT+QBAND= <op_band></op_band>	ОК
	If there is any error related to ME functionality:
	+CME ERROR: <err></err>
Maximum Response Time	30s, determined by network.
Reference	
Quectel	

<op_band></op_band>	"EGSM_MODE"
	"DCS_MODE"
	"PCS_MODE"

"GSM850_MODE" "EGSM_DCS_MODE" "GSM850_PCS_MODE" "GSM850_EGSM_DCS_PCS_MODE"

NOTE

The following radio setting to be updated is stored in non-volatile memory.

6.7. AT+QENG Switch on or off Engineering Mode

AT+QENG Switch on or off Engir	Switch on or off Engineering Mode	
Test Command AT+QENG=?	Response +QENG: (list of supported <mode>s),(list of supported <dump>s) OK</dump></mode>	
Read Command AT+QENG?	Response The corresponding information is reported selectively according to <dump>. +QENG: <mode>,<dump> URCs of the serving cell information: +QENG: 0,<mcc>,<mnc>,<lac>,<cellid>,<bcch>,<bsic>, <dbm>,<c1>,<c2>,<txp>,<rla>,<tch>,<ts>,<maio>,<hsn><t a>,<rxq_sub>,<rxq_full> URCs of 1-6 neighboring cell information: [+QENG: 1,list of (<ncell>,<bcch>,<dbm>,<bsic>,<c1>, <c2>,<mcc>, <mnc>,<lac>,<cellid>)] URCs of cell frequency list (CA) of the serving cell: [+QENG: 2,list of (<arfcn>)] BA measured result list: [+QENG: 4,record number of the list, list of (<bcch>,< dbm>,<bsic>)] OK</bsic></bcch></arfcn></cellid></lac></mnc></mcc></c2></c1></bsic></dbm></bcch></ncell></rxq_full></rxq_sub></t </hsn></maio></ts></tch></rla></txp></c2></c1></dbm></bsic></bcch></cellid></lac></mnc></mcc></dump></mode></dump>	
Write Command	Response	
AT+QENG= <mode>[,<dump>]</dump></mode>	ОК	

	If there is any error:
	ERROR
	+CME ERROR: <err></err>
Maximum Response Time	300ms
Reference	
Quectel	

<mode></mode>	<u>0</u>	Switch off engineering mode
	1	Switch on engineering mode
	2	Switch on engineering mode, and activate the URC report of network information
<dump></dump>	0 Only display the serving cell information	
	1 Display the serving cell information, 1-6 neighboring cells information	
	2	Display the serving cell information and list of serving cell carrier list
	3	Display the serving cell information, 1-6 neighboring cell information and list of
		serving cell carrier list
	4	Display the serving cell information, 1-6 neighboring cell information, list of serving
		cell carrier list and BA measured result list.
<mcc></mcc>	Mobile	country code
<mnc></mnc>	Mobile	network code
<lac></lac>	Locatio	on area code in hex format
<cellid></cellid>	Cell ID	in hex format
<bcch></bcch>	Absolu	te Radio Frequency Channel Number of Broadcast Control Channel (BCCH)
<bsic></bsic>	Base s	tation identity code
<dbm></dbm>	Receiv	e signal level in dBm unit
<c1></c1>	C1 valu	Je
<c2></c2>	C2 value	
<txp></txp>	Maximum TX power level when accessing on a CCH	
<rla></rla>	Minimum receiving level permitted to access the system	
<ts></ts>	Time Slots	
<maio></maio>	MAIO value	
<hsn></hsn>	HSN value	
<tch></tch>	ARFCN of TCH, 'h' figure hopping	
<ta></ta>	Timing Advance, range 0~63	
<rxq_sub></rxq_sub>	RX quality(sub), range 0-7	
<rxq_full></rxq_full>	RX quality(full), range 0-7	
<ncell></ncell>		er of neighboring six cell ID 1~6
<arfcn></arfcn>	Absolute radio frequency channel number	

NOTE

The following radio settings to be updated are stored in non-volatile memory.

- 1. When mode is 2, auto URCs are reported per 5 seconds.
- 2. The <lac> and <cellid> parameters are available in hex format, and these parameters are in decimal.
- 3. If the cell information is not detected, the parameter is replaced by 'x' char.
- 4. If the detecting is not expert mode, parameters **<tch>**, **<ts>**, **<maio>**, **<hsn>**, **<ta>**, **<rxq_sub>** and **<rxq_full>** will not display the parameter value while are replaced by 'x' char.
- 5. During the network connecting, if the hopping frequency is supported by the network, the channel of TCH is instable. Using the 'h' figure **<tch>** under this mode.
- 6. Under expert mode, when the <c1> and <c2> of the serving cell cannot be updated, using the '-1' figure to display the illegal value. At the same time, <txp> and <rla> parameters cannot be updated in a certain condition, all the same holding the value of idle mode. This is because ME cannot be updated in this mode. ME cannot update the selection of cell and reselection of the parameter. When the connecting is over, mobile device will go back to idle mode and offer the correct value.
- 7. If TA can report the information of the neighboring cell, the URCs of six neighboring cell should be reported. If some cells cannot be measured, the 'x' char will be filled in the parameter of these cells.
- Under the special mode, <c1> and <c2> parameters of the neighboring cell may be measured, and then an unmeaning value will be reported. When <mcc>, <mnc> ,<lac> and <cellid> parameters of the neighboring cell cannot be measured, the 'x' char will be filled in these parameters of all the six cells.
- 9. The command does not report the RX level and the RX quality. The **AT+CSQ** command can be used to query the values of RX level and RX quality.
- 10. The **AT+QSPCH** command can be used to re-query the type of the voice channel during calling (FR, HR, EFR, AMR_FR, AMR_HR).
- 11. The maximum record number of BA measured result list is 32. If any of the BCCH cannot get the BSIC value, the BSIC will show 'x' instead. The measured list only includes the measured BCCH in the BA list, not the whole BA list.

Example

Idle mode: AT+QENG=2 OK

+QENG: 0,460,00,1806,2602,64,46,-72,119,119,5,8,x,x,x,x,x,x,x,x

Dedicated mode: AT+QENG=2,3 OK

+QENG: 0,460,00,1806,2031,17,41,-73,-1,-1,5,8,h,7,0,24,1,0,1

+QENG:

1,1,17,-74,41,111,95,460,00,1806,2031,2,2,-74,45,110,94,460,00,1878,151,3,22,-77,40,100,84,460,00,1 806,2012,4,24,-77,45,97,81,460,00,1806,2013,5,25,-81,40,83,67,460,00,1806,2032,6,532,-92,48,-1,-1,x ,x,x,x

6.8. AT+QSCANF Scan Power of GSM Frequency

AT+QSCANF Scan Power of GSI	M Frequency
Test Command AT+QSCANF=?	Response +QSCANF: (list of supported <band>s),(list of supported <freq>s) OK</freq></band>
Write Command AT+QSCANF= <band>,<freq></freq></band>	Response If <freq>=9999 and command is successful: +QSCANF: 1, CH113, -63.5 2, CH80, -64.2 4, CH22, -64.5 20, CH116, -74.2 OK If <freq> is fixed frequency and command is successful: +QSCANF: CH<freq>, <dbm> If there is any error related to ME functionality: +CME ERROR: <err></err></dbm></freq></freq></freq>
Maximum Response Time	300ms
Reference Quectel	

<band></band>	0	BAND 900
	1	BAND 1800
	2	BAND 1900
	3	BAND 850
<freq></freq>	9999	Scan all frequencies in a specified band
	0-1023	Scan a fixed frequency in a specified band
<dbm></dbm>	The signal strength indication in dbm value for a specified frequency	

NOTE

Before using this AT command, RF function of system MUST be disabled. Please make sure equipment functionality level is 0 or 4. About how to change the functionality level, please refer to **AT+CFUN**.

6.9. AT+QLOCKF Lock GSM Frequency

AT+QLOCKF Lock GSM Frequen	icy
Test Command AT+QLOCKF=?	Response +QLOCKF: (list of supported <mode>s),(list of supported <band1900>s), (list of supported <arfcn>s)</arfcn></band1900></mode>
	ОК
Read Command	Response
AT+QLOCKF?	+QLOCKF: <status></status>
	ОК
Write Command	Response
AT+QLOCKF= <mode>,<band1900>,< arfcn1>[,<arfcn2>[,<arfcn3>]]</arfcn3></arfcn2></band1900></mode>	OK
	If there is any error:
	ERROR
	+CME ERROR: <err></err>
Maximum Response Time	300ms
Reference	
Quectel	

<mode></mode>	<u>0</u>	Disable lock frequency
	1	Enable lock frequency
	2	Enable lock frequency and auto switch to saved frequency after powered on
<band1900></band1900>	0	Not a cell ID of 1900 band
	1	Cell ID of 1900 band
	2	Auto distinguish whether is a cell ID of 1900 band
<arfcn></arfcn>	0-1024	ARFCN information
<status></status>	0	ME did not lock a certain ARFCN
	1	ME has locked a certain ARFCN

7 Call Related Commands

7.1. ATA Answer an Incoming Call

ATA Answer an Incoming Call	
Execution Command	Response
ATA	TA sends off-hook to the remote station.
	Response in case of voice call, if successfully connected:
	ОК
	Response if no connection:
	NO CARRIER
Maximum Response Time	1s, determined by network.
Reference	
V.25ter	

NOTES

- 1. Any additional commands on the same command line are ignored.
- 2. This command may be aborted generally by receiving a character during execution. The aborting is not possible during some states of connection establishment such as handshaking.
- 3. See also **ATX**.

Example

RING	//A voice call is ringing
AT+CLCC	
+CLCC: 1,1,4,0,0,"02154450290",129,""	
ОК	
ATA	//Accept the voice call with ATA
ОК	

7.2. ATD Mobile Originated Call to Dial a Number

ATD Mobile Originated Call to Dial a Number		
Execution Command	Response	
ATD <n>[<mgsm>][;]</mgsm></n>	This command can be used to set up outgoing voice, data or	
	fax calls. It also serves to control supplementary services.	
	If no dial tone and (parameter setting ATX2 or ATX4):	
	NO DIALTONE	
	If busy and (parameter setting ATX3 or ATX4):	
	BUSY	
	If a connection cannot be established:	
	NO CARRIER	
	If connection is successful and voice call:	
	ОК	
Maximum Response Time	1s, determined by network.	
Reference		
V.25ter		

Parameter

<n></n>	String of dialing digits and optionally V.25ter modifiers	
	Dialiı	ng digits: 0-9 , * , # , + , A , B , C
	Follo	owing V.25ter modifiers are ignored:
	,(cor	mma), T , P , ! , W , @
Emergenc	y call:	
<n></n>	Standardized emergency number 112 (no (U)SIM needed)	
<mgsm></mgsm>	String of GSM modifiers:	
	I.	Actives CLIR (Disables presentation of own number to called party)
	i	Deactivates CLIR (Enable presentation of own number to called party)
	G	Activates closed user group invocation for this call only
	g	Deactivates closed user group invocation for this call only
<;>	Only	required to set up voice call, return to command state

NOTES

1. This command may be aborted generally by receiving an **ATH** command or a character during execution. The aborting is not possible during some states of connection establishment such as handshaking.

- 2. Parameter "I" and "i" are applicable for cases where there is no "*" or "#" code within the dial string.
- 3. **<n>** is the default value for last number that can be dialed by **ATDL**.
- 4. *# codes sent with **ATD** are treated as voice calls. Therefore, the command must be terminated with a semicolon ";".
- 5. See **ATX** command for setting result code and call monitoring parameters.
- 6. Responses returned after dialing with ATD
 - For voice call, two different responses modes can be determined. TA returns **OK** immediately either after dialing was completed or after the call was established. The setting is controlled by **AT+COLP**. Factory default is **AT+COLP=0**, which causes the TA returns **OK** immediately after dialing was completed; otherwise TA will returns **OK**, **BUSY**, **NO DIAL TONE**, or **NO CARRIER**.
- 7. Using **ATD** during an active voice call:
 - When a user originates a second voice call while there is already an active voice call, the first call will be automatically put on hold.
 - The current states of all calls can be easily checked at any time by using AT+CLCC command.

Example

ATD10086; OK //Dialing out the called party's number

7.3. ATH Disconnect Existing Connection

ATH Disconnect Existing Connection	
Execution Command ATH[n]	Response Disconnect existing call by local TE from command line and terminate call. OK
Maximum Response Time	90s, determined by network.
Reference V.25ter	

Parameter

<n> 0 Disconnect existing call from command line and terminate the call

NOTE

OK is issued after circuit 109 (DCD) is turned off, if it was previously on.

7.4. +++ Switch from Data Mode to Command Mode

+++ Switch from Data Mode to Command Mode		
Execution Command +++	Response This command is only available during TA is in data mode, such as, a GPRS connection and a transparent TCP/IP connection. The +++ character sequence causes the TA to cancel the data flow over the AT interface and switch to command mode. This allows you to enter AT command while maintaining the data connection with the remote server or, accordingly, the GPRS connection.	
Maximum Response Time	300ms	
Reference V.25ter		

NOTES

- 1. To prevent the +++ escape sequence from being misinterpreted as data, it should comply to following sequence:
 - No characters entered for T1 time (0.5 seconds).
 - +++ characters entered with no characters in between. For PPP online mode, the interval between two "+" MUST be less than 1 second and for a transparent TCP/IP connection, the interval MUST be less than 20ms.
 - No characters entered for T1 time (0.5 seconds).
 - Switch to command mode, otherwise go to step 1.
- 2. To return from command mode back to data or PPP online mode: Enter ATO
 - Another way to change to command mode is through DTR, see **AT&D** command for the details.

7.5. ATO Switch from Command Mode to Data Mode

ATO Switch from Command Mode to Data Mode		
Execution Command	Response	
ATO[n]	TA resumes the connection and switches back from command mode to data mode. If connection is not successfully resumed: NO CARRIER	
	If connection is successfully resumed, TA returns to data	

	mode from command mode CONNECT <text></text>
Maximum Response Time	300ms
Reference V.25ter	

<n></n>	0	Switch from command mode to data mode
fl	9	
NOTE	1	

TA returns to data mode from command mode **CONNECT** *<***text***>*,*<***text***>* only if parameter setting is X>0.

7.6. ATP Select Pulse Dialing

ATP Select Pulse Dialing					
Execution Command ATP	Response OK				
Maximum Response Time	300ms				
Reference V.25ter					

NOTE

No effect in GSM.

7.7. ATS0 Set Number of Rings before Automatically Answering Call

ATS0 Set Number of Rings before Automatically Answering Call						
Read Command	Response					
ATS0?	<n></n>					
	ОК					
Write Command	Response					

ATS0= <n></n>	This parameter setting determines the number of rings before auto-answer. OK
Maximum Response Time	300ms
Reference V.25ter	

<n></n>	<u>0</u>	Automatic answering is disabled
	1-255	Enable automatic answering on the ring number specified

NOTE

If **<n>** is set too high, the calling party may hang up before the call can be answered automatically.

Example

ATS0=3 OK	//Set three rings before automatically answering a call
RING RING	//A call is incoming
RING	//Automatically answering the call after three rings

7.8. ATS6 Set Pause before Blind Dialing

ATS6 Set Pause before Blind Dialing					
Read Command	Response				
ATS6?	<n></n>				
	ОК				
Write Command	Response				
ATS6= <n></n>	ОК				
Maximum Response Time	300ms				
Reference					
V.25ter					

<n></n>	0- <u>2</u> -10	Number of seconds to wait before blind dialing
6		
NOTE	E	
No effe	ect in GSM.	

7.9. ATS7 Set the Time to Wait for Connection Completion

ATS7 Set the Time to Wait for Connection Completion								
Read Command	Response							
ATS7?	<n></n>							
	ОК							
Write Command	Response							
ATS7= <n></n>	This parameter setting determines the duration of time to wait							
	for the connection completion in case of answering or							
	originating a call.							
	ОК							
Maximum Response Time	300ms							
Reference								
V.25ter								

Parameter

<n> 1-60-255 Number of seconds to wait for connection completion

NOTES

- 1. If the called party has specified a high value for **ATS0=<n>**, call setup may fail.
- 2. The correlation between **ATS7** and **ATS0** is important. For example: call may fail if **ATS7=30** and **ATS0=20**.
- 3. **ATS7** is only applicable to data call.

7.10. ATS8 Set the Time to Wait for Comma Dial Modifier

ATS8 Set the Time to Wait for Comma Dial Modifier						
Read Command	Response					
ATS8?	<n></n>					
	ОК					
Write Command	Response					
ATS8= <n></n>	ОК					
Maximum Response Time	300ms					
Reference						
V.25ter						

Parameter

<n></n>	0	No pause when comma encountered in dial string
	1- <u>2</u> -255	Number of seconds to wait

G	NOTE									
U	No effect in	n GS	SM.							

7.11. ATS10 Set Disconnect Delay after Indicating the Absence of Data

Carrier

ATS10 Set Disconnect Delay after Indicating the Absence of Data Carrier								
Read Command	Response							
ATS10?	<n></n>							
	ОК							
Write Command	Response							
ATS10= <n></n>	This parameter setting determines the amount of time that the							
	TA will remain connected in absence of data carrier. If the							
	data carrier is once more detected before disconnection, the							
	TA remains connected.							
	ОК							
Maximum Response Time	300ms							

Reference	
V.25ter	

<n> 1-<u>15</u>-254 Number of delay in 100ms

7.12. ATT Select Tone Dialing

ATT Select Tone Dialing	
Execution Command ATT	Response OK
Maximum Response Time	300ms
Reference	
V.25ter	

NOTE

No effect in GSM.

AT+CSTA Select Type of Address	
Test Command	Response
AT+CSTA=?	+CSTA: (list of supported <type>s)</type>
	ОК
Read Command	Response
AT+CSTA?	+CSTA: <type></type>
	OK
Maximum Response Time	300ms
Reference	
GSM 07.07	

<type></type>	Current address type setting.	
	<u>129</u>	Unknown type (IDSN format number)
	145	International number type (ISDN format)
	161	National number type (IDSN format)

7.14. AT+CLCC List Current Calls of ME

AT+CLCC List Current Calls of ME	
Test Command	Response
AT+CLCC=?	ОК
Execution Command	Response
AT+CLCC	TA returns a list of current calls of ME. If command succeeds
	but no calls are available, no information response is sent to TE.
	[+CLCC: <id1>,<dir>,<stat>,<mode>,<mpty>[,</mpty></mode></stat></dir></id1>
	<number>,<type>[,""]]</type></number>
	[<cr><lf>+CLCC: <id2>,<dir>,<stat>,<mode>,<mpty>[,</mpty></mode></stat></dir></id2></lf></cr>
	<number>,<type>[,""]]</type></number>
	[]]]
	ОК
	If there is any error related to ME functionality:
	+CME ERROR: <err></err>
Maximum Response Time	300ms
Reference	
GSM 07.07	

Integer type; call identification number as described in GSM 02.30 subclause 4.5.5.1; this			
number can be used in AT+CHLD Command operations			
0	Mobile originated (MO) call		
1	Mobile terminated (MT) call		
State of the call			
0	Active		
1	Held		
2	Dialing (MO call)		
	numb 0 1 State 0 1		

	3	Alerting (MO call)
	4	Incoming (MT call)
	5	Waiting (MT call)
<mode></mode>	Bearer/	tele service
	0	Voice
	1	Data
	2	FAX
	9	Unknown
<mpty></mpty>	0	Call is not one of multiparty (conference) call parties
	1	Call is one of multiparty (conference) call parties
<number></number>	Phone	number in string type in format specified by <type></type>
<type></type>	Type of	address of octet in integer format
	129	Unknown type (IDSN format number)
	145	International number type (ISDN format)

Example

AT+CLCC	
+CLCC: 1,0,0,0,0,"10086",129,""	//List the current call of ME
ок	

7.15. AT+CR Service Reporting Control

AT+CR Service Reporting Control	
Test Command	Response
AT+CR=?	+CR: (list of supported <mode>s)</mode>
	ОК
Read Command	Response
AT+CR?	+CR: <mode></mode>
	ок
Write Command	Response
AT+CR=[<mode>]</mode>	TA controls whether or not intermediate result code +CR:
	<serv> is returned from the TA to the TE when a call set up.</serv>
	ОК
Maximum Response Time	300ms
Reference	
GSM 07.07	

<mode></mode>	<u>0</u>	Disable
	1	Enable
<serv></serv>	ASYNC	Asynchronous transparent
	SYNC	Synchronous transparent
	RELASYNC	Asynchronous non-transparent
	REL SYNC	Synchronous non-transparent

NOTE

Intermediate result code:

If it is enabled, an intermediate result code is transmitted at a point during link negotiation. At the same time, the TA has determined which speed and quality of service will be used, before any error control or data compression reports are transmitted, and before any final result code (e.g. **CONNECT**) is transmitted.

7.16. AT+CRC Set Cellular Result Code for Incoming Call Indication

AT+CRC Set Cellular Result Code for Incoming Call Indication		
Test Command	Response	
AT+CRC=?	+CRC: (list of supported <mode>s)</mode>	
	ОК	
Read Command	Response	
AT+CRC?	+CRC: <mode></mode>	
	ОК	
Write Command	Response	
AT+CRC=[<mode>]</mode>	TA controls whether or not the extended format of incoming	
	call indication is used.	
	OK	
Maximum Response Time	300ms	
Reference		
GSM 07.07		

<mode></mode>	<u>0</u>	Disable extended format
	1	Enable extended format

NOTE

Unsolicited result code:

When it is enabled, an incoming call is indicated to the TE with unsolicited result code **+CRING: <type>** instead of the normal RING.

Parameter

ASYNC	Asynchronous transparent
SYNC	Synchronous transparent
RELASYNC	Asynchronous non-transparent
REL SYNC	Synchronous non-transparent
FAX	Facsimile
VOICE	Voice
	SYNC REL ASYNC REL SYNC FAX

Example

AT+CRC=1 OK	//Enable extended format
+CRING: VOICE ATH OK	//Indicate an incoming call to the TE
AT+CRC=0 OK	//Disable extended format
RING ATH OK	//Indicate incoming call to the TE

7.17. AT+CRLP Select Radio Link Protocol Parameter

AT+CRLP Select Radio Link Prot	ocol Parameter
Test Command AT+CRLP=?	Response TA returns values supported. RLP (Radio Link Protocol) versions 0 and 1 share the same parameter set. TA returns only one line for this set (where <ver< b=""><i>x</i>> is not present). +CRLP: (list of supported <iws< b="">>s),(list of supported <mws< b="">>s),(list of supported <t1< b="">>s),(list of supported <n2< b="">>s),(list of supported <ver1< b="">>s),(list of supported <t4< b="">>s) OK</t4<></ver1<></n2<></t1<></mws<></iws<></ver<>
Read Command	Response

AT+CRLP?	TA returns current settings for RLP version. RLP versions 0 and 1 share the same parameter set. TA returns only one line for this set (where <verx></verx> is not present). +CRLP: <iws>,<mws>,<t1>,<n2>,<ver1>,<t4></t4></ver1></n2></t1></mws></iws>

<mode></mode>	<u>0</u>	PDU mode
	1	Text mode

8.3. AT+CSCA SMS Service Center Address

AT+CSCA SMS Service Center Address	
Test Command	Response
AT+CSCA=?	ОК
Read Command	Response
AT+CSCA?	+CSCA: <sca>,<tosca></tosca></sca>

	ОК
Write Command	Response
AT+CSCA= <sca>[,<tosca>]</tosca></sca>	TA updates the SMSC address, through which mobile originated SMS are transmitted. In text mode, setting is used by sending and writing commands. In PDU mode, setting is used by the same commands, but only when the length of the SMSC address coded into <pdu></pdu> parameter equals zero. OK
	If there is any error related to ME functionality:
	+CMS ERROR: <err></err>
Maximum Response Time	300ms
Reference GSM 07.05	

<sca></sca>	GSM 04.11 RP SC address Address-Value field in string format; BCD numbers (or GSM
	default alphabet characters) are converted to characters of the currently selected TE
	character set (specified by AT+CSCS in TS 07.07); type of address given by <tosca></tosca>
<tosca></tosca>	Service center address format GSM 04.11 RP SC address Type-of-Address octet in integer
	format (default refer to <toda></toda>)

NOTE

The command writes the parameters in non-volatile memory.

Example

AT+CSCA="+8613800210500",145	//SMS service center address
ОК	
AT+CSCA?	//Query SMS service center address
+CSCA: "+8613800210500",145	
ОК	

8.4. AT+CPMS Preferred SMS Message Storage

AT+CPMS Preferred SMS Messa	AT+CPMS Preferred SMS Message Storage	
Test Command AT+CPMS=?	Response +CPMS: (list of supported <mem1>s),(list of supported <mem2>s),(list of supported <mem3>s) OK</mem3></mem2></mem1>	
Read Command AT+CPMS?	Response +CPMS: <mem1>,<used1>,<total1>,<mem2>,<used2>,<t otal2>,<mem3>,<used3>,<total3> OK</total3></used3></mem3></t </used2></mem2></total1></used1></mem1>	
Write Command AT+CPMS= <mem1>[,<mem2>[,<mem 3>]]</mem </mem2></mem1>	Response TA selects memory storages <mem1>, <mem2> and <mem3> to be used for reading, writing, etc. +CPMS: <used1>,<total1>,<used2>,<total2>,<used3>,<to tal3> OK If there is any error related to ME functionality: +CMS ERROR: <err></err></to </used3></total2></used2></total1></used1></mem3></mem2></mem1>	
Maximum Response Time	300ms	
Reference GSM 07.05		

<mem1></mem1>	Messages to be read and deleted from this memory storage	
	" <u>SM</u> "	SIM message storage
	"ME"	Mobile Equipment message storage
	"MT"	Sum of "SM" and "ME" storages
<mem2></mem2>	Messages will be written and sent to this memory storage	
	" <u>SM</u> "	SIM message storage
	"ME"	Mobile Equipment message storage
	"MT"	Sum of "SM" and "ME" storages
<mem3></mem3>	Received messages will be placed in this memory storage,	
	if routing to PC is not set (AT+CNMI)	
	" <u>SM</u> "	SIM message storage
	"ME"	Mobile Equipment message storage
	"MT"	Sum of "SM" and "ME" storages

<usedx></usedx>	Integer type; Number of messages currently in <memx></memx>
<totalx></totalx>	Integer type; Number of messages storable in <memx></memx>

NOTE

The (U)SIM and ME message storages offer maximum space for 50 and 10 messages, respectively. The (U)SIM message storage is selected in priority.

Example

AT+CPMS="SM","SM","SM" +CPMS: 0,50,0,50,0,50	//Set SMS message storage as "SM" ((U)SIM)
OK AT+CPMS? +CPMS: "SM",0,50,"SM",0,50,"SM",0,50	//Query the current SMS message storage
ок	

8.5. AT+CMGD Delete SMS Message

AT+CMGD Delete SMS Message	
Test Command AT+CMGD=?	Response +CMGD: (list of supported <index>s),(list of supported <delflag>s)</delflag></index>
	ок
Write Command AT+CMGD= <index>[,<delflag>]</delflag></index>	Response TA deletes message from preferred message storage <mem1> location <index>. OK If there is any error: ERROR</index></mem1>
Maximum Response Time	+CMS ERROR: <err> 300ms. Note: Operation of <delflag> depends on the storage of deleted messages.</delflag></err>
Reference GSM 07.05	

<index></index>	Integer type; value in the range of location numbers supported by the associated memory		
<delflag></delflag>	<u>0</u>	Delete message specified in <index></index>	
	1	Delete all read messages from <mem1> storage, leaving unread messages and</mem1>	
		stored mobile originated messages (whether sent or not) untouched	
	2	Delete all read messages from <mem1> storage and sent mobile originated</mem1>	
		messages, leaving unread messages and unsent mobile originated messages	
		untouched	
	3	Delete all read messages from <mem1> storage, sent and unsent mobile</mem1>	
		originated messages, leaving unread messages untouched	
	4	Delete all messages from <mem1> storage</mem1>	

Example

AT+CMGD=1	//Delete the message specified in <index>=1</index>
ОК	
AT+CMGD=1,4	//Delete all messages from <mem1> storage</mem1>
ОК	

8.6. AT+CMGL List SMS Messages from Preferred Storage

AT+CMGL List SMS Messages from Preferred Storage		
Test Command AT+CMGL=?	Response +CMGL: (list of supported <stat>s)</stat>	
Write Command AT+CMGL= <stat>[,<mode>]</mode></stat>	Response TA returns messages with status value <stat></stat> from message storage <mem1></mem1> to the TE. If status of the message is 'received unread', status in the storage changes to 'received read'.	
	 In text mode (AT+CMGF=1) and when the command is successful: For SMS-SUBMITs and/or SMS-DELIVERs: +CMGL: <index>,<stat>,<oa da="">,[<alpha>],[<scts>][,<too a="" toda="">,<length>]<cr><lf><data>[<cr><lf></lf></cr></data></lf></cr></length></too></scts></alpha></oa></stat></index> +CMGL: <index>,<stat>,<da oa="">,[<alpha>],[<scts>][,<too a="" toda="">,<length>]<cr><lf><data>[<cr><lf></lf></cr></data></lf></cr></length></too></scts></alpha></da></stat></index> 	
	For SMS-STATUS-REPORTs:	

+CMGL: <index>,<stat>,<fo>,<mr>,[<ra>],[<tora>],[<tora>],[<tora>],[<tora>],[<tora>],[<tora>],[<tora>],[<tora>],[<tora>],[<tora>],[<tora>],[<tora>],<sct </sct s>,<dt>,<tb,<stb,<tb,<tb,<tb,<tb,<tb,<tb,<tb,< tb="">+CMGL: <index>,<stat>,<fo>,<mr>,[<ra>],[<tora>],[<tora>],<sct </sct s>,<dt>,<tb,<tb,<tb,<tb,<tb,<tb,<tb,< tb="">For SMS-COMMANDS: +CMGL: <index>,<stat>,<fo>,<ct>[<cr><lf> +CMGL: <index>,<stat>,<fo>,<ct>[<cr><lf> +CMGL: <index>,<stat>,<fo>,<ct>[<cr><lf> +CMGL: <index>,<stat>,<fo>,<ct>[<cr><lf> +CMGL: <index>,<stat>,<fo>,<ct>[<cr><lf> +CMGL: <index>,<stat>,<sn>,<mid>,<page>,<page>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpage>,<cpag< th=""><th></th><th></th></cpag<></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></cpage></page></page></mid></sn></stat></index></lf></cr></ct></fo></stat></index></lf></cr></ct></fo></stat></index></lf></cr></ct></fo></stat></index></lf></cr></ct></fo></stat></index></lf></cr></ct></fo></stat></index></tb,<tb,<tb,<tb,<tb,<tb,<tb,<></dt></tora></tora></ra></mr></fo></stat></index></tb,<stb,<tb,<tb,<tb,<tb,<tb,<tb,<tb,<></dt></tora></tora></tora></tora></tora></tora></tora></tora></tora></tora></tora></tora></ra></mr></fo></stat></index>

GSM 07.05		
	GSM 07.05	

<stat></stat>	1) In text mode	
	"REC UNREAD"	Received unread messages
	"REC READ"	Received read messages
	"STO UNSENT"	Stored unsent messages
	"STO SENT"	Stored sent messages
	"ALL"	All messages
	2) In PDU mode	

	0 Received unread messages			
	1 Received read messages			
	2 Stored unsent messages			
	3 Stored sent messages			
	4 All messages			
<mode></mode>	0 Normal (default)			
	1 Not change status of the specified SMS record			
<alpha></alpha>	String type alphanumeric representation of <da></da> or <oa></oa> corresponding to the entry found in MT phonebook; implementation of this feature is manufacturer specific; used character			
	set should be the one selected with command select TE character set AT+CSCS (see definition of this command in TS 07.07)			
<da></da>	GSM 03.40 TP-Destination-Address Address-Value field in string format; BCD numbers (or			
	GSM default alphabet characters) are converted to characters of the currently selected TE			
	character set (refer to AT+CSCS in TS 07.07); type of address given by <toda></toda>			
<data></data>	In the case of SMS: GSM 03.40 TP-User-Data in text mode responses; format:			
	- if <dcs> indicates that GSM 03.38 default alphabet is used and <fo> indicates that</fo></dcs>			
	GSM 03.40 is used: TPUser-Data-Header-Indication is not set			
	- if TE character set other than "HEX" (refer to Command Select TE character set			
	+CSCS in TS 07.07): ME/TA converts GSM alphabet into current TE character set			
	according to rules of Annex A			
	 if TE character set is "HEX": ME/TA converts each 7-bit character of GSM alphabet into 			
	two IRA character long hexadecimal number [e.g. character P (GSM 23) is presented as 17 (IRA 49 and 55)]			
	- if <dcs></dcs> indicates that 8-bit or UCS2 data coding scheme is used, or <fo></fo> indicates			
	that GSM 03.40 TP-User-Data-Header-Indication is set: ME/TA converts each 8-bit			
	octet into two IRA character long hexadecimal number [e.g. octet with integer value 42			
	is presented to TE as two characters 2A (IRA 50 and 65)]			
	In the case of CBS: GSM 03.41 CBM Content of Message in text mode responses; format: – if <dcs></dcs> indicates that GSM 03.38 default alphabet is used: ME/TA converts GSM into			
	the current character supported by TE			
	- if TE character set other than "HEX" (refer to AT+CSCS in GSM 07.07): ME/TA			
	converts GSM alphabet into current TE character set according to rules of Annex A			
	- if TE character set is "HEX": ME/TA converts each 7-bit character of GSM alphabet			
	into two IRA character long hexadecimal number			
	- if <dcs> indicates that 8-bit or UCS2 data coding scheme is used: ME/TA converts</dcs>			
	each 8-bit octet into two IRA character long hexadecimal number			
<length></length>	Integer type value indicating in the text mode (AT+CMGF=1) the length of the message			
	body <data> (or <cdata>) in characters; or in PDU mode (AT+CMGF=0), the length of the</cdata></data>			
	actual TP data unit in octets (i.e. the RP layer SMSC address octets are not counted in the			
	length)			
<index></index>	Integer type value in the range of location numbers supported by the associated memory			
<0a>	GSM 03.40 TP-Originating-Address Address-Value field in string format; BCD numbers (or			
	GSM default alphabet characters) are converted to characters of the currently selected TE			
	character set (refer to AT+CSCS in TS 07.07); type of address given by <tooa></tooa>			

<pdu></pdu>	In the case of SMS: GSM 04.11 SC address followed by GSM 03.40 TPDU in hexadecimal
	format: ME/TA converts each octet of TP data unit into two IRA character long hexadecimal
	number [e.g. octet with integer value 42 is presented to TE as two characters 2A (IRA 50
	and 65)]. In the case of CBS: GSM 03.41 TPDU in hexadecimal format
<scts></scts>	GSM 03.40 TP-Service-Center-Time-Stamp in time-string format (refer to <dt>)</dt>
<toda></toda>	GSM 04.11 TP-Destination-Address Type-of-Address octet in integer format (when first
	character of <da></da> is + (IRA 43) default value is 145, otherwise default value is 129)
<tooa></tooa>	GSM 04.11 TP-Originating-Address Type-of-Address octet in integer format (refer to
	<toda>)</toda>

NOTE

If parameter is omitted, the command returns the list of SMS with "REC UNREAD" status.

Example

AT+CMGF=1	//Set SMS message format as text mode
OK AT+CMGL="ALL"	//List all messages from message storage
+CMGL: 1,"STO UNSENT","","",	
This is a test from Quectel	
+CMGL: 2,"STO UNSENT","","",	
This is a test from Quectel,once again.	

ок

8.7. AT+CMGR Read SMS Message

AT+CMGR Read SMS Message	
Test Command AT+CMGR=?	Response OK
Write Command AT+CMGR= <index>[,<mode>]</mode></index>	Response TA returns SMS message with location value <index></index> from message storage <mem1></mem1> to the TE. If status of the message is 'received unread', status in the storage changes to 'received read'.
	 In text mode (AT+CMGF=1) and when the command is executed successfully: For SMS-DELIVER:

	+CMGR: <stat>,<oa>,[<alpha>],<scts>[,<tooa>,<fo>,<pi d>,<dcs>,<sca>,<tosca>,<length>]<cr><lf><data></data></lf></cr></length></tosca></sca></dcs></pi </fo></tooa></scts></alpha></oa></stat>
	For SMS-SUBMIT:
	+CMGR: <stat>,<da>,[<alpha>][,<toda>,<fo>,<pid>,<dc s>,[<vp>],<sca>,<tosca>,<length>]<cr><lf><data></data></lf></cr></length></tosca></sca></vp></dc </pid></fo></toda></alpha></da></stat>
	for SMS-STATUS-REPORTs:
	+CMGR: <stat>,<fo>,<mr>,[<ra>],[<tora>],<scts>,<dt>,<s t></s </dt></scts></tora></ra></mr></fo></stat>
	For SMS-COMMANDs:
	+CMGR: <stat>,<fo>,<ct>[,<pid>,[<mn>],[<da>],[<toda>], <length><cr><lf><cdata>]</cdata></lf></cr></length></toda></da></mn></pid></ct></fo></stat>
	For CBM storage: +CMGR: <stat>,<sn>,<mid>,<dcs>,<page>,<pages><cr> <lf><data></data></lf></cr></pages></page></dcs></mid></sn></stat>
	2) In PDU mode (AT+CMGF=0) and when command is successful:
	+CMGR: <stat>,[<alpha>],<length><cr><lf><pdu></pdu></lf></cr></length></alpha></stat>
	ОК
	 3) If there is any error related to ME functionality: +CMS ERROR: <err></err>
Maximum Response Time	Depends on the length of message content.
Reference GSM 07.05

8.10. AT+CMSS Send SMS Message from Storage

AT+CMSS Send SMS Message f	rom Storage
Test Command	Response
AT+CMSS=?	ОК
Write Command	Response
AT+CMSS= <index>[,<da>[,<toda>]]</toda></da></index>	TA sends message with location value <index></index> from message storage <mem2></mem2> to the network (SMS-SUBMIT). If new recipient address <da></da> is given, it shall be used instead of the one stored with the message. Reference value <mr></mr> is returned to the TE on successful message delivery. Values can be used to identify message upon unsolicited delivery status report result code. 1) In text mode (AT+CMGF=1) and when the command is sent successfully: +CMSS: <mr>[,<scts>]</scts></mr>

	OK 2) In PDU mode (+CMGF=0) and the command is sent successfully; +CMSS: <mr>[,<ackpdu>] OK 3) If there is any error related to ME functionality:</ackpdu></mr>
	+CMS ERROR: <err></err>
Maximum Response Time	120s, determined by network.
Reference GSM 07.05	

<index></index>	Integer type value in the range of location numbers supported by the associated memory
<da></da>	GSM 03.40 TP-Destination-Address Address-Value field in string format; BCD numbers (or
	GSM default alphabet characters) are converted to characters of the currently selected TE
	character set (specified by AT+CSCS in TS 07.07); type of address given by <toda></toda>
<toda></toda>	GSM 04.11 TP-Destination-Address Type-of-Address octet in integer format [when first
	character of <da> is + (IRA 43) default value is 145, otherwise default value is 129]</da>
<mr></mr>	GSM 03.40 TP-Message-Reference in integer format
<scts></scts>	GSM 03.40 TP-Service-Centre-Time-Stamp in time-string format (refer to <dt>)</dt>
<ackpdu></ackpdu>	In the case of SMS: GSM 04.11 SC address followed by GSM 03.40 TPDU in hexadecimal
	format: ME/TA converts each octet of TP data unit into two IRA character long hexadecimal
	number [e.g. octet with integer value 42 is presented to TE as two characters 2A (IRA 50
	and 65)].
	In the case of CBS: GSM 03.41 TPDU in hexadecimal format

8.11. AT+CMGC Send SMS Command

AT+CMGC Send SMS Command	
Test Command	Response
AT+CMGC=?	ОК
Write Command	Response
1) In text mode (AT+CMGF=1):	TA transmits SMS command message from a TE to the
AT+CMGC= <fo>[,<ct>,<pid>,<mn>,<d< td=""><td>network (SMS-COMMAND). Message reference value <mr></mr></td></d<></mn></pid></ct></fo>	network (SMS-COMMAND). Message reference value <mr></mr>
a>, <toda>]<cr></cr></toda>	is returned to the TE on successful message delivery. Value
text is entered	can be used to identify message upon unsolicited delivery

<ctrl-z esc=""></ctrl-z>	status report result code.
ESC quits without sending	1) In text mode(AT+CMGF=1) and when the command is sent
	successfully:
2) In PDU mode (AT+CMGF= 0):	+CMGC: <mr>[,<scts>]</scts></mr>
AT+CMGC= <length><cr></cr></length>	
PDU is given <ctrl-z esc=""></ctrl-z>	OK
	2) In PDU mode(AT+CMGF=0) and when the command is
	sent successfully:
	+CMGC: <mr>[,<ackpdu>]</ackpdu></mr>
	ОК
	3) If there is any error related to ME functionality:
	+CMS ERROR: <err></err>
Maximum Response Time	300ms
Reference	
GSM 07.05	

<fo></fo>	First octet of GSM 03.40 SMS-COMMAND (default value is 2) in integer format
<ct></ct>	GSM 03.40 TP-Command-Type in integer format (default value is 0)
<pid></pid>	GSM 03.40 TP-Protocol-Identifier in integer format (default value is 0)
<mn></mn>	GSM 03.40 TP-Message-Number in integer format
<da></da>	GSM 03.40 TP-Destination-Address Address-Value field in string format; BCD numbers (or
	GSM default alphabet characters) are converted to characters of the currently selected TE
	character set (specified by AT+CSCS in TS 07.07); type of address given by <toda></toda>
<toda></toda>	GSM 04.11 TP-Destination-Address Type-of-Address octet in integer format [when first
	character of <da></da> is + (IRA 43) default value is 145, otherwise default value is 129]
	129 Unknown type (IDSN format number)
	145 International number type (ISDN format)
<length></length>	Integer type value indicating in PDU mode (AT+CMGF=0), the length of the actual TP data
	unit in octets (i.e. the RP layer SMSC address octets are not counted in the length)
<mr></mr>	GSM 03.40 TP-Message-Reference in integer format
<scts></scts>	GSM 03.40 TP-Service-Centre-Time-Stamp in time-string format (refer to <dt></dt>)
<ackpdu></ackpdu>	In the case of SMS: GSM 04.11 SC address followed by GSM 03.40 TPDU in hexadecimal
	format: ME/TA converts each octet of TP data unit into two IRA character long hexadecimal
	number [e.g. octet with integer value 42 is presented to TE as two characters 2A (IRA 50
	and 65)].
	In the case of CBS: GSM 03.41 TPDU in hexadecimal format

8.12. AT+CNMI New SMS Message Indications

AT+CNMI New SMS Message Indications	
Test Command AT+CNMI=?	Response +CNMI: (list of supported <mode>s),(list of supported <mt>s),(list of supported <bm>s),(list of supported <ds>s),(list of supported <bfr>s) OK</bfr></ds></bm></mt></mode>
Read Command AT+CNMI?	Response +CNMI: <mode>,<mt>,<bm>,<ds>,<bfr> OK</bfr></ds></bm></mt></mode>
Write Command AT+CNMI=[<mode>[,<mt>[,<bm>[,<ds >[,<bfr>]]]]]</bfr></ds </bm></mt></mode>	Response TA selects the procedure on how the received new messages from the network are indicated to the TE when TE is active, e.g. DTR signal is ON. If TE is inactive (e.g. DTR signal is OFF), receiving message should be done as specified in GSM 03.38. OK If there is any error related to ME functionality: ERROR
Maximum Response Time	300ms
Reference GSM 07.05	

<mode></mode>	0	Buffer unsolicited result codes in the TA. If TA result code buffer is full, indications can be buffered in some other place or the oldest indications may be discarded and replaced with the new received indications
	1	Discard indication and reject new received message unsolicited result codes when TA-TE link is reserved (e.g. in on-line data mode). Otherwise forward them directly to the TE
	<u>2</u>	Buffer unsolicited result codes in the TA when TA-TE link is reserved (e.g. in on-line data mode) and flush them to the TE after reservation. Otherwise forward them directly to the TE
	3	Forward unsolicited result codes directly to the TE. Use specified TA-TE link technique to transmit both result codes and data to TE when TA is in on-line data mode

<mt></mt>	(The r	rules for storing received SMS depend on its data coding scheme [refer to GSM 03.38
	[2]), p	referred memory storage (+CPMS) setting and this value]:
	0	No SMS-DELIVER indications are routed to the TE
	<u>1</u>	If SMS-DELIVER is stored into ME/TA, indication of the memory location is routed
		to the TE by using unsolicited result code: +CMTI: <mem>,<index></index></mem>
	2	SMS-DELIVERs (except class 2) are routed directly to the TE using unsolicited
		result code: +CMT: [<alpha>],<length><cr><lf><pdu> (PDU mode enabled)</pdu></lf></cr></length></alpha>
		or +CMT: <oa>, [<alpha>],<scts></scts></alpha></oa>
		[, <tooa>,<fo>,<pid>,<dcs>,<sca>,<tosca>,<length>]<cr><lf><data></data></lf></cr></length></tosca></sca></dcs></pid></fo></tooa>
		(Text mode enabled; about parameters in italics, refer to Command Show Text
		Mode Parameters AT++CSDH). Class 2 messages result in indication as defined
		in <mt></mt> =1
	3	Class 3 SMS-DELIVERs are routed directly to TE by using unsolicited result
		codes defined in <mt>=2. Messages of other classes result in indication as</mt>
		defined in <mt></mt> =1
<bm></bm>	(The r	ules for storing received CBMs depend on its data coding scheme [refer to GSM
	03.38	[2]), the setting of Select CBM Types (AT+CSCB) and this value]:
	<u>0</u>	No CBM indications are routed to the TE
	2	New CBMs are routed directly to the TE by using unsolicited result code: +CBM:
		<pre><length><cr><lf><pdu> (PDU mode enabled) or +CBM:</pdu></lf></cr></length></pre>
		<sn>,<mid>,<dcs>,<page>,<pages><cr><lf><data> (Text mode enabled)</data></lf></cr></pages></page></dcs></mid></sn>
	3	Class 3 CBMs are routed directly to TE by using unsolicited result codes defined
		in < bm >=2. If CBM storage is supported, messages of other classes result in
		indication as defined in < bm >=1
<ds></ds>	<u>0</u>	No SMS-STATUS-REPORTs are routed to the TE
	1	SMS-STATUS-REPORTs are routed to the TE by using unsolicited result code:
		+CDS: <length><cr><lf><pdu> (PDU mode enabled) or +CDS:</pdu></lf></cr></length>
		<fo>,<mr>,[<ra>],[<tora>],<scts>,<dt>,<st> (Text mode enabled)</st></dt></scts></tora></ra></mr></fo>
<bfr></bfr>	<u>0</u>	TA buffer of unsolicited result codes defined in this command is flushed to the TE
		when <mode></mode> 13 is entered (OK response shall be given before flushing the
		codes)
	1	TA buffer of unsolicited result codes defined within this command is cleared when
		<mode>13 is entered</mode>

NOTE

 Unsolicited result code
 Indicates that new message has been received

 +CMTI: <mem>,<index>
 Indicates that new message has been received

 +CMT: [<alpha>],<length><CR><LF><pdu>
 Short message is output directly

 +CBM: <length><CR><LF><pdu>
 Cell broadcast message is output directly

Example

AT+CMGF=1 OK	//Set SMS message format as text mode
AT+CSCS="GSM" OK	//Set character set as GSM which is used by the TE
AT+CNMI=2,1	//SMS-DELIVER is stored into ME/TA, indication of the memory location is routed to the TE
ОК	
+CMTI: "SM",5	//Indicate that new message has been received
AT+CNMI=2,2	//Set SMS-DELIVERs are routed directly to the TE
ОК	
+CMT: "+8615021012496"," ","2010/09/25	17:25:01+32",145,4,0,241,"+8613800210500",145,27
This is a test from Quectel	//Short message is output directly

8.13. AT+CRES Restore SMS Settings

AT+CRES Restore SMS Settings	
Test Command AT+CRES=?	Response +CRES: (list of supported <profile>s) OK</profile>
Write Command AT+CRES[= <profile>]</profile>	Response TA restores SMS settings from non-volatile memory to active memory. A TA can contain several profiles of settings. Settings specified in commands service center address AT+CSCA , set message parameters AT+CSMP and select cell broadcast message types AT+CSCB (if implemented) are restored. Certain settings may not be supported by the storage (e.g. (U)SIM SMS parameters) and therefore cannot be restored. OK If there is any error related to ME functionality: ERROR
Maximum Response Time	300ms
Reference GSM 07.05	

<profile> 0-3 Manufacturer specific profile number where settings are to be stored

8.14. AT+CSAS Save SMS Settings

AT+CSAS Save SMS Settings	
Test Command AT+CSAS=?	Response +CSAS: (list of supported <profile>s) OK</profile>
Write Command AT+CSAS[= <profile>]</profile>	Response TA saves active message service settings to non-volatile memory. A TA can contain several profiles of settings. Settings specified in commands service center address AT+CSCA , Set Message Parameters AT+CSMP and Select cell broadcast message Types AT+CSCB (if implemented) are saved. Certain settings may not be supported by the storage (e.g. (U)SIM SMS parameters) and therefore cannot be saved. OK If there is any error related to ME functionality: ERROR
Maximum Response Time	300ms
Reference GSM 07.05	

Parameter

<profile> <u>0</u>-3 Manufacturer specific profile number where settings are to be stored

8.15. AT+CSCB Select Cell Broadcast SMS Messages

AT+CSCB Select Cell Broadcast SMS Messages	
Test Command	Response
AT+CSCB=?	+CSCB: (list of supported <mode>s)</mode>

	OK
Read Command	Response
AT+CSCB?	+CSCB: <mode>,<mids>,<dcss></dcss></mids></mode>
	ОК
Write Command	Response
AT+CSCB= <mode>[,mids>[,<dcss>]]</dcss></mode>	TA selects which types of CBMs are to be received by the ME.
	OK
	If there is any error related to ME functionality:
	+CMS ERROR: <err></err>
Maximum Response Time	300ms
Reference	
GSM 07.05	
GSM 07.05	

<mode></mode>	0 Message types specified in <mids></mids> and <dcss></dcss> are accepted
	1 Message types specified in <mids></mids> and <dcss></dcss> are not accepted
<mids></mids>	String type; all different possible combinations of CBM message identifiers (refer to <mid>)</mid>
	(default is empty string)
	e.g. "0,1,5,320-478,922"
<dcss></dcss>	String type; all different possible combinations of CBM data coding schemes (refer to
	<dcs>) (default is empty string)</dcs>
	e.g. "0-3,5"

NOTE

The command writes the parameters in non-volatile memory.

8.16. AT+CSDH Show SMS Text Mode Parameters

AT+CSDH Show SMS Text Mode Parameters	
Test Command	Response
AT+CSDH=?	+CSDH: (list of supported <show>s)</show>
	OK

Read Command AT+CSDH?	Response +CSDH: <show></show>
	ОК
Write Command AT+CSDH=[<show>]</show>	Response TA determines whether detailed header information is shown in text mode result codes. OK
Maximum Response Time	300ms
Reference GSM 07.05	

<u>0</u>	Do not show header values defined in commands AT+CSCA and AT+CSMP	
	(<sca>, <tosca>, <fo>, <vp>, <pid> and <dcs>) nor <length>, <toda> or</toda></length></dcs></pid></vp></fo></tosca></sca>	
	<tooa> in +CMT, +CMGL, +CMGR result codes for SMS-DELIVERs and</tooa>	
	SMS-SUBMITs in text mode	
1	Show the values in result codes	
	<u>0</u> 1	

Example

AT+CSDH=0 OK AT+CMGR=3 +CMGR: "REC READ","+8615021012496","","2010/09/25 15:06:37+32" This is a test from Quectel OK AT+CSDH=1 OK AT+CMGR=3 +CMGR: "REC READ","+8615021012496", ,"2010/09/25 15:06:37+32",145,4,0,241,"+861 3800210500",145,27 This is a test from Quectel OK

8.17. AT+CSMP Set SMS Text Mode Parameters

AT+CSMP Set SMS Text Mode Parameters		
Test Command AT+CSMP=?	Response +CSMP: (list of supported <fo>s), (list of supported <vp>s), (list of supported <pid>s), (list of supported <dcs>s) OK</dcs></pid></vp></fo>	
Read Command AT+CSMP?	Response +CSMP: <fo>,<vp>,<pid>,<dcs> OK</dcs></pid></vp></fo>	
Write Command AT+CSMP=[<fo>[,<vp>[,<pid>[,<dcs>]]]]</dcs></pid></vp></fo>	Response TA selects values for additional parameters needed when SM is sent to the network or placed in a storage when text mode is selected (AT+CMGF=1). It is possible to set the validity period starting from when the SM is received by the SMSC (<vp></vp> is in range 0 255) or define the absolute time of the validity period termination (<vp></vp> is a string). OK	
Maximum Response Time	300ms	
Reference GSM 07.05		

Parameter

<fo></fo>	Depending on the command or result code: first octet of GSM 03.40 SMS-DELIVER, SMS-SUBMIT (default value is 17), SMS-STATUS-REPORT, or SMS-COMMAND (default value is 2) in integer format. SMS status report is supported under text mode if <fo></fo> is set to 49
<vp></vp>	Depending on SMS-SUBMIT <fo></fo> setting: GSM 03.40 TP-Validity-Period either in integer format (default 167) or in time-string format (refer to <dt></dt>)
<pid></pid>	GSM 03.40 TP-Protocol-Identifier in integer format (default value is 0)
-	5 (, , , , , , , , , , , , , , , , , ,
<dcs></dcs>	GSM 03.38 SMS Data Coding Scheme in Integer format

NOTE

The command writes the parameters in non-volatile memory.

8.18. AT+QCLASS0 Store Class 0 SMS to (U)SIM when Receiving Class

0 SMS

AT+QCLASS0 Store Class 0 SMS	S to (U)SIM when Receiving Class 0 SMS
Test Command	Response
AT+QCLASS0=?	+QCLASS0: (list of supported <mode>s)</mode>
	ОК
Read Command	Response
AT+QCLASS0?	+QCLASS0: <mode></mode>
	ОК
Write Command	Response
AT+QCLASS0= <mode></mode>	ОК
	If there is any error:
	ERROR
Maximum Response Time	300ms
Reference	
Quectel	

Parameter

<mode></mode>	<u>0</u>	Disable storing Class 0 SMS when receiving Class 0 SMS
	1	Enable storing Class 0 SMS when receiving Class 0 SMS

Example

//When in text mode:	
AT+CPMS?	
+CPMS: "SM",6,50,"SM",6,50,"SM",6,50	
OK	
AT+QCLASS0=0	//Disable storing SMS when receiving Class 0 SMS
ок	
+CMT: "+8615021012496",,"2010/09/26 09):55:37+32"
TEST1 from Quectel	//Short message is output directly
AT+QCLASS0=1	//Enable storing SMS when receiving Class 0 SMS
OK	

+CMTI: "SM",7

//Indicate that new message has been received

AT+CMGR=7 +CMGR: "REC UNREAD","+8615021012496","","2010/09/26 09:56:17+32" TEST2 from Quectel

ΟΚ

8.19. AT+QMGDA Delete All SMS

AT+QMGDA Delete All SMS	
Test Command	Response
AT+QMGDA=?	+QMGDA: (listed of supported <type>s)</type>
	OK
Write Command	Response
AT+QMGDA= <type></type>	ОК
	If there is any error:
	ERROR
	+CME ERROR: <err></err>
Maximum Response Time	Depends on the storage of deleted messages.
Reference	
Quectel	

<type></type>	1) In text mode:	
	"DEL READ"	Delete all read messages
	"DEL UNREAD"	Delete all unread messages
	"DEL SENT"	Delete all sent SMS
	"DEL UNSENT"	Delete all unsent SMS
	"DEL INBOX"	Delete all received SMS
	"DEL ALL"	Delete all SMS
	2) In PDU mode:	
	1	Delete all read messages
	2	Delete all unread messages
	3	Delete all sent SMS
	4	Delete all unsent SMS
	5	Delete all received SMS
	6	Delete all SMS

8.20. AT+QSMSCODE Configure SMS Code Mode

AT+QSMSCODE Configure SMS	Code Mode
Test Command AT+QSMSCODE=?	Response +QSMSCODE: (list of supported <mode>s)</mode>
	ОК
Read Command	Response
AT+QSMSCODE?	+QSMSCODE: <mode></mode>
	ОК
Write Command	Response
AT+QSMSCODE= <mode></mode>	ОК
	If there is any error:
	ERROR
Maximum Response Time	300ms
Reference	
Quectel	

<mode></mode>	0	Code mode according with NOKIA
	4	
	<u>1</u>	Code mode according with SIEMENS
	2	Code mode according with NOKIA, and hexadecimal 0x11 treated as "_"
		hexadecimal 0x02 treated as "\$"

9 Phonebook Commands

9.1. AT+CPBS Select Phonebook Memory Storage

AT+CPBS Select Phonebook Me	PBS Select Phonebook Memory Storage	
Test Command	Response	
AT+CPBS=?	+CPBS: (list of supported <storage>s)</storage>	
	OK	
Read Command	Response	
AT+CPBS?	+CPBS: <storage>[,<used>,<total>]</total></used></storage>	
	ОК	
Write Command	Response	
AT+CPBS= <storage></storage>	TA selects current phone book memory storage, which is	
	used by other phone book commands.	
	ОК	
Maximum Response Time	300ms	
Reference		
GSM 07.07		

<storage></storage>	"MC"	ME missed (unanswered) calls list
	"RC"	ME received calls list
	"DC"	ME dialed calls list (AT+CPBW may not be applicable or this storage) (same as
		LD)
	"LA"	Last Number All list (LND/LNM/LNR)
	"ME"	ME phonebook
	"BN"	(U)SIM barred dialed number
	"SD"	(U)SIM service dial number
	"VM"	(U)SIM voice mailbox
	"FD"	(U)SIM fix dialing-phone book
	"LD"	(U)SIM last-dialing-phone book
	"ON"	(U)SIM (or ME) own numbers (MSISDNs) list

	<u>"SM"</u> (U)SIM phonebook	
<used></used>	Integer type value indicating the total number of used locations in selected memory	
<total></total>	Integer type value indicating the total number of locations in selected memory	

NOTE

(U)SIM phonebook record can store up to 250pcs and ME phonebook record can store up to 100pcs.

9.2. AT+CPBW Write Phonebook Entry

AT+CPBW Write Phonebook Entry	
Test Command AT+CPBW=?	Response TA returns location range supported by the current storage, the maximum length of <number></number> field, supported number formats of the storage, and the maximum length of <text></text> field. +CPBW: (The range of supported <index></index> s), <nlength></nlength> , (list of supported <type></type> s), <tlength></tlength>
Write Command AT+CPBW= <index>[,<number>[,<typ e>[,<text>]]]</text></typ </number></index>	Response TA writes phone book entry in location number <index></index> in the current phone book memory storage selected with +CPBS . Entry fields written are phone number <number></number> (in the format <type></type>) and text <text></text> associated with the number. If those fields are omitted, phone book entry is deleted. If <index></index> is left out, but <number></number> is given, entry is written to the first free location in the phone book. OK
Maximum Response Time	300ms
Reference GSM 07.07	

<nlength></nlength>	Maximum length of phone number
<tlength></tlength>	Maximum length of text for number
<index></index>	Location number
<number></number>	Phone number

<type></type>	Type of number	
	129	Unknown type (IDSN format number)
	145	International number type (ISDN format)
<text></text>	Text for phone number in current TE character set specified by AT+CSCS	

NOTES

- If the current memory storage is "MC", "RC", "DC", "LA" or "LD", <number>, <type> and <text>
 parameters must be default. AT+CPBW command only supports settings <index> delete the number
 of current phone book.
- 2. <number> can't be empty.
- 3. The following characters in **<text>** must be entered via the escape sequence:

GSM char	Seq.Seq.(hex)	Note
\	\5C 5C 35 43	(backslash)
н	\22 5C 32 32	(string delimiter)
BSP	\08 5C 30 38	(backspace)
NULL	\00 5C 30 30	(GSM null)
ʻ0' (GSM null) ma	y cause problems for a	pplication layer software when reading string lengths.

Example

AT+CSCS="GSM"	
ОК	
AT+CPBW=10,"15021012496",129,"QUECTEL"	
ОК	//Make a new phonebook entry at location 10
AT+CPBW=10	//Delete entry at location 10
ОК	

9.3. AT+CPBR Read Current Phonebook Entries

AT+CPBR Read Current Phonebook Entries	
Test Command AT+CPBR=?	Response TA returns location range supported by the current storage as
	a compound value and the maximum lengths of <number></number> and <text></text> fields. +CPBR: (list of supported <index></index> s), <nlength></nlength> , <tlength></tlength>
	ОК
Write Command	Response
AT+CPBR= <index1>[,<index2>]</index2></index1>	TA returns phone book entries in location number range <index1> <index2> from the current phone book memory</index2></index1>

	storage selected with +CPBS. If <index2> is left out, only location <index1> is returned. +CPBR:<index1>,<number>,<type>,<text>[<cr><lf>+C PBR:+CPBR: <index2>, <number>, <type>, <text>]</text></type></number></index2></lf></cr></text></type></number></index1></index1></index2>
	OK
	300ms.
Maximum Response Time	Note: Operation of <index2> depends on the storage of read</index2>
	phonebook entries.
Reference	
GSM 07.07	

<index></index>	Location number
<nlength></nlength>	Maximum length of phone number
<tlength></tlength>	Maximum length of name for number
<index1></index1>	The first phone book record to read
<index2></index2>	The last phonebook record to read
<number></number>	Phone number
<type></type>	Type of number
<text></text>	Text name for phone number in current TE character set specified by AT+CSCS

Example

AT+CSCS="GSM"	
ОК	
AT+CPBR=10	//Query phonebook entries in location 10
+CPBR: 10,"15021012496",129,"QUECTEL	-
ОК	

9.4. AT+CPBF Find Phonebook Entries

AT+CPBF Find Phonebook Entries	
Test Command	Response
AT+CPBF=?	+CPBF: <nlength>,<tlength></tlength></nlength>
	ОК
Write Command	Response
AT+CPBF=[<findtext>]</findtext>	TA returns phonebook entries (from the current phonebook

	memory storage selected with AT+CPBS) which contain alphanumeric string <findtext>. [+CPBF: <index1>, <number>,<type>, <text>[[] <cr><lf>+CBPF: <index2>,<number>,<type>,<text>] OK</text></type></number></index2></lf></cr></text></type></number></index1></findtext>
Maximum Response Time	Depends on the storage of phonebook entries.
Reference GSM 07.07	

<findtext></findtext>	String type field of maximum length <tlength></tlength> in current TE character set specified by AT+CSCS .	
<index1></index1>	Integer type values in the range of location numbers of phone book memory	
<index2></index2>	Integer type values in the range of location numbers of phone book memory	
<number></number>	Phone number in string type of format <type></type>	
<type></type>	Type of address octet in integer format:	
	129 Unknown type (IDSN format number)	
	145 International number type (ISDN format)	
<text></text>	String type field of maximum length <tlength> in current TE character set specified by</tlength>	
	AT+CSCS	
<nlength></nlength>	Integer type value indicating the maximum length of field <number></number>	
<tlength></tlength>	Integer type value indicating the maximum length of field <text></text>	

9.5. AT+CNUM Subscriber Number

AT+CNUM Subscriber Number	
Test Command	Response
AT+CNUM=?	OK
Execution Command	Response
AT+CNUM	+CNUM: [<alpha1>],<number1>,<type1></type1></number1></alpha1>
	[<cr><lf>+CNUM: [<alpha2>],<number2>,<type2></type2></number2></alpha2></lf></cr>
	[]]
	ОК
	If there is any error related to ME functionality:
	+CME ERROR: <err></err>
Maximum Response Time	300ms

Reference	
GSM 07.07	

<alphax></alphax>	Optional alphanumeric string associated with <numberx>; used character set should be</numberx>
	the one selected with command. Select TE character set AT+CSCS
<number<i>x></number<i>	Phone number in string type of format specified by <typex></typex>
<type<i>x></type<i>	Type of address octet in integer format (refer to GSM 04.08 subclause 10.5.4.7)

10 GPRS Commands

10.1. AT+CGATT Attach to/Detach from GPRS Service

AT+CGATT Attach to/Detach from GPRS Service	
Test Command	Response
AT+CGATT=?	+CGATT: (list of supported <state>s)</state>
	ОК
Read Command	Response
AT+CGATT?	+CGATT: <state></state>
	OK
Write Command	Response
AT+CGATT= <state></state>	ОК
	If there is any error related to ME functionality:
	+CME ERROR: <err></err>
Maximum Response Time	75s, determined by network.
Reference	
GSM 07.07	

Parameter

<state></state>	Indicates the state of GPRS attachment	
	0	Detached
	<u>1</u>	Attached
	Other	values are reserved and will result in an ERROR response to the Write Command

Example

AT+CGATT=1	//Attach to GPRS service
ОК	
AT+CGATT=0	//Detach from GPRS service
ОК	

AT+CGATT?

+CGATT: 0

//Query the current GPRS service state

ΟΚ

10.2. AT+CGDCONT Define PDP Context

AT+CGDCONT Define PDP Context	
Test Command AT+CGDCONT=?	Response +CGDCONT: (range of supported <cid>s), <pdp_type>, <apn>, <pdp_addr>, (list of supported <data_comp>s), (list of supported <head_comp>s) OK</head_comp></data_comp></pdp_addr></apn></pdp_type></cid>
Read Command AT+CGDCONT?	Response +CGDCONT: <cid>,<pdp_type>,<apn>,<pdp_addr>,<data_comp>,<h ead_comp> <cr><lf>+CGDCONT: <cid>,<pdp_type>,<apn>,<pdp_addr>,<data_comp>,<h ead_comp> OK</h </data_comp></pdp_addr></apn></pdp_type></cid></lf></cr></h </data_comp></pdp_addr></apn></pdp_type></cid>
Write Command AT+CGDCONT= <cid>[,<pdp_type>[,< APN>[,<pdp_addr>[,<d_comp>[,<h_c omp>]]]]]</h_c </d_comp></pdp_addr></pdp_type></cid>	Response OK If there is any error: ERROR
Maximum Response Time	300ms
Reference GSM 07.07	

- <cid> (PDP Context Identifier) a numeric parameter which specifies a particular PDP context definition. The parameter is local to the TE-MT interface and is used in other PDP context-related commands. The range of permitted values (minimum value=1) is returned by the test form of the command
- <PDP_type> (Packet Data Protocol type) a string parameter which specifies the type of packet data protocol X25 ITU-T/CCITT X.25 layer 3 IP Internet Protocol (IETF STD 5) OSPIH Internet

	Hosted O	ctet Stream Protocol PPP Point to Point Protocol (IETF STD 51)	
<apn></apn>	(Access I	Point Name) a string parameter that is a logical name that is used to select the	
	GGSN o	r the external packet data network. If the value is null or omitted, then the	
	subscripti	ion value will be requested	
<pdp_addr></pdp_addr>	A string p	arameter identifies the MT in the address space applicable to the PDP. If the value	
	is null or	r omitted, then a value may be provided by the TE during the PDP startup	
	procedure or, failing that, a dynamic address will be requested. The allocated address may		
	be read u	ising the AT+CGPADDR command	
<d_comp></d_comp>	A numerio	c parameter that controls PDP data compression	
	0 0	Off (default if value is omitted)	
	Other val	ues are reserved	
<h_comp></h_comp>	A numerio	c parameter that controls PDP header compression	
	0 0	Off (default if value is omitted)	
	Other val	ues are reserved	

Example

AT+CGDCONT=1,"IP","CMNET"	//Define PDP context, <cid>=1,</cid>
	<pdp_type>=IP,<apn>=CMNET</apn></pdp_type>
OK	
OK .	

10.3. AT+CGQREQ Quality of Service Profile (Requested)

AT+CGQREQ Quality of Service	Profile (Requested)
Test Command AT+CGQREQ=?	Response +CGQREQ: <pdp_type>,(list of supported <precedence>s), (list of supported <delay>s),(list of supported <reliability>s), (list of supported <peak>s),(list of supported <mean>s) OK</mean></peak></reliability></delay></precedence></pdp_type>
Read Command AT+CGQREQ?	Response +CGQREQ: <cid>,<precedence>,<delay>,<reliability>,<p eak>,<mean> <cr><lf>+CGQREQ: <cid>,<precedence>,<delay>,<reli ability>,<peak>,<mean> OK</mean></peak></reli </delay></precedence></cid></lf></cr></mean></p </reliability></delay></precedence></cid>
Write Command AT+CGQREQ= <cid>[,<precedence>[, <delay>[,<reliability>[,<peak>[,<mean >]]]]]</mean </peak></reliability></delay></precedence></cid>	Response OK If there is any error related to ME functionality:

	+CME ERROR: <err></err>
Maximum Response Time	300ms
Reference	
GSM 07.07	

<cid></cid>	A numeric parameter which specifies a particular PDP context definition (see	
	AT+CGDCONT command)	
The following parameter are defined in GSM 03.60		
<precedence></precedence>	A numeric parameter which specifies the precedence class	
<delay></delay>	A numeric parameter which specifies the delay class	
<reliability></reliability>	A numeric parameter which specifies the reliability class	
<peak></peak>	A numeric parameter which specifies the peak throughput class	
<mean></mean>	A numeric parameter which specifies the mean throughput class	

10.4. AT+CGQMIN Quality of Service Profile (Minimum Acceptable)

AT+CGQMIN Quality of Service Profile (Minimum Acceptable)	
Test Command AT+CGQMIN=?	Response +CGQMIN: <pdp_type>, (list of supported <precedence>s), (list of supported <delay>s), (list of supported <reliability>s), (list of supported <peak>s), (list of supported <mean>s) OK</mean></peak></reliability></delay></precedence></pdp_type>
Read Command AT+CGQMIN?	Response +CGQMIN: <cid>,<precedence>,<delay>,<reliability>,<pe ak>,<mean> <cr><lf>+CGQMIN: <cid>,<precedence>,<delay>,<relia bility>,<peak>,<mean> OK</mean></peak></relia </delay></precedence></cid></lf></cr></mean></pe </reliability></delay></precedence></cid>
Write Command AT+CGQMIN= <cid>[,<precedence>[,< delay>[,<reliability>[,<peak>[,<mean>]]]]]</mean></peak></reliability></precedence></cid>	Response OK If there is any error related to ME functionality: +CME ERROR: <err></err>
Maximum Response Time	300ms

Reference	
GSM 07.07	

A numeric parameter which specifies a particular PDP context definition (see		
AT+CGDCONT command)		
The following parameters are defined in GSM 03.60.		
A numeric parameter which specifies the precedence class		
A numeric parameter which specifies the delay class		
A numeric parameter which specifies the reliability class		
A numeric parameter which specifies the peak throughput class		
A numeric parameter which specifies the mean throughput class		

10.5. AT+CGACT PDP Context Activate or Deactivate

AT+CGACT PDP Context Activate or Deactivate	
Test Command	Response
AT+CGACT=?	+CGACT: (list of supported <state>s)</state>
	ОК
Read Command	Response
AT+CGACT?	+CGACT: <cid>,<state>[<cr><lf>+CGACT:<cid><stat< td=""></stat<></cid></lf></cr></state></cid>
	e>]
	OK
Write Command	Response
AT+CGACT= <state>[,<cid>]</cid></state>	OK
	If context is deactivated successfully, return:
	NO CARRIER
	If there is any error related to ME functionality:
	+CME ERROR: <err></err>
Maximum Response Time	150s, determined by network.
Reference	
GSM 07.07	

<state></state>	Indicates the state of PDP context activation	
	0 Deactivated	
	1 Activated	
	Other values are reserved and will result in an ERROR response to the write command	
<cid></cid>	A numeric parameter which specifies a particular PDP context definition (see	
	AT+CGDCONT command). The default value is 1.	

Example

AT+CGDCONT=1,"IP","CMNET" OK	//Define PDP context
AT+CGACT=1,1 OK	//Activated PDP
AT+CGACT=0,1 NO CARRIER	//Deactivated PDP

10.6. AT+CGDATA Enter Data State

AT+CGDATA Enter Data State	
Test Command AT+CGDATA=?	Response +CGDATA: (list of supported <l2p>s)</l2p>
AI+CGDAIA=?	+CODATA. (list of supported <lzp>S)</lzp>
	ОК
Write Command	Response
AT+CGDATA= <l2p>[,<cid>[,<cid>[,</cid></cid></l2p>	ОК
111	NO CARRIER
	If there is any error related to ME functionality:
	+CME ERROR: <err></err>
Maximum Response Time	300ms
Reference	
GSM 07.07	

<l2p></l2p>	A string parameter that indicates the layer 2 protocol to be used between the TE and MT:		
	PPP - Point to Point protocol for a PDP such as IP		
	Other values are not supported and will result in an ERROR response to the execution		
	command		
<cid></cid>	A numeric parameter which specifies a particular PDP context definition (see		

AT+CGDCONT command)

10.7. AT+CGPADDR Show PDP Address

AT+CGPADDR Show PDP Address	
Test Command	Response
AT+CGPADDR=?	+CGPADDR: (list of defined <cid>s)</cid>
	ОК
Write Command	Response
AT+CGPADDR= <cid></cid>	+CGPADDR: <cid>[,<pdp_addr>]</pdp_addr></cid>
	ОК
	If there is any error"
	ERROR
Maximum Response Time	300ms
Reference	
GSM 07.07	

Parameter

<cid> A numeric parameter which specifies a particular PDP context definition (see AT+CGDCONT command)

<PDP_addr>A string that identifies the MT in the address space applicable to the PDP. The address may be static or dynamic. For a static address, it will be the one set by the AT+CGDCONT command when the context was defined. For a dynamic address it will be the one assigned during the last PDP context activation that used the context definition referred to <cid>.

NOTE

This command dictates the behaviour of PPP in the ME but not that of any other GPRS-enabled foreground layer, e.g. browser.

Example

AT+CGDCONT=1,"IP","CMNET" OK AT+CGACT=1,1 //Define PDP context

//Activated PDP

OK AT+CGPADDR=1

+CGPADDR: 1,"10.76.51.180"

//Show PDP address

οκ

10.8. AT+CGCLASS GPRS Mobile Station Class

AT+CGCLASS GPRS Mobile Stat	ion Class
Test Command	Response
AT+CGCLASS=?	+CGCLASS: (list of supported <class>s)</class>
	OK
Read Command	Response
AT+CGCLASS?	+CGCLASS: <class></class>
	ОК
Write Command	Response
AT+CGCLASS= <class></class>	OK
	ERROR
	If there is any error related to ME functionality:
	+CME ERROR: <err></err>
Maximum Response Time	30s, determined by network.
Reference	
GSM 07.07	

<class></class>	A string parameter which indicates the GPRS mobile class (Functionality in descending		
	order)		
	<u>"B"</u>	Class B	
	"CG"	Class C in GPRS only mode	
	"CC"	Class C in circuit switched only mode	

10.9. AT+CGEREP Control Unsolicited GPRS Event Reporting

AT+CGEREP Control Unsolicited	I GPRS Event Reporting
Test Command AT+CGEREP=?	Response +CGEREP: (list of supported <mode>s)</mode>
Read Command AT+CGEREP?	Response +CGEREP: <mode></mode>
Maximum Response Time	300ms
Write Command AT+CGEREP= <mode></mode>	Response OK If there is any error: ERROR
Reference GSM 07.07	

Parameter

<mode></mode>	0	Buffer unsolicited result codes in the MT; if MT result code buffer is full, the oldest
		one can be discarded. No codes are forwarded to the TE
	1	Discard unsolicited result codes when MT-TE link is reserved (e.g. in on-line data
		mode); otherwise forward them directly to the TE

NOTE

Unsolicited Result Codes supported:

+CGEV: NW DEACT <PDP_type>, <PDP_addr>[,<cid>]

+CGEV: ME DEACT <PDP_type>, <PDP_addr>[,<cid>]

+CGEV: NW DETACH

+CGEV: ME CLASS <class>

Parameters

<PDP_type> Packet Data Protocol type (see AT+CGDCONT command)

<PDP_addr>Packet Data Protocol address (see AT+CGDCONT command)

<cid> Context ID (see AT+CGDCONT command)

<class> GPRS mobile class (see AT+CGCLASS command)

10.10. AT+CGREG Network Registration Status

AT+CGREG Network Registratio	n Status
Test Command	Response
AT+CGREG=?	+CGREG: (list of supported <n>s)</n>
	OK
Read Command	Response
AT+CGREG?	+CGREG: <n>,<stat>[,<lac>,<ci>]</ci></lac></stat></n>
	OK
Write Command	Response
AT+CGREG=[<n>]</n>	ОК
	If there is any error:
	ERROR
Maximum Response Time	300ms
Reference	
GSM 07.07	

Parameter

<ci></ci>	decima String t	I) ype; two bytes cell ID in hexadecimal format
String type; two byte location area code in hexadecim		ype; two byte location area code in hexadecimal format (e.g. "00C3" equals 195 ir
	5	Registered, roaming
	4	Unknown
	3	Registration denied
	2	Not registered, but ME is currently searching a new operator to register to
	1	Registered, home network
<stat></stat>	0	Not registered, ME is not currently searching a new operator to register to
		+CGREG: <stat>[,<lac>,<ci>]</ci></lac></stat>
	2	Enable network registration and location information unsolicited result code
	1	Enable network registration unsolicited result code +CGREG: <stat></stat>
<n></n>	<u>0</u>	Disable network registration unsolicited result code

NOTE

For parameter state, options 0 and 1 are supported only.

Example

AT+CGATT=0 NO CARRIER

+CGREG: 0,"1878","0873" AT+CGATT=1

ΟΚ

+CGREG: 2,"1878","0873"

+CGREG: 1,"1878","0873"

10.11. AT+CGSMS Select Service for MO SMS Messages

AT+CGSMS Select Service for M	O SMS Messages
Test Command AT+CGSMS=?	Response +CGSMS: (list of currently available <service>s)</service>
	ОК
Read Command	Response
AT+CGSMS?	+CGSMS: <service></service>
	ок
Write Command	Response
AT+CGSMS=[<service>]</service>	ок
	If there is any error related to ME functionality:
	+CME ERROR: <err></err>
Maximum Response Time	300ms
Reference	
GSM 07.07	

<service></service>	A numeric parameter which indicates the service or service preference to be used	
	0	GPRS
	<u>1</u>	Circuit switch
	2	GPRS preferred (use circuit switched if GPRS is not available)
	3	Circuit switch preferred (use GPRS if circuit switched is not available)

NOTE

The circuit switched service route is the default method.

10.12. AT+QGPCLASS Change GPRS Multi-slot Class

AT+QGPCLASS Change GPRS N	Iulti-slot Class
Test Command	Response
AT+QGPCLASS=?	MULTISLOT CLASS: (list of currently available <class>s)</class>
	OK
Read Command	Response
AT+QGPCLASS?	MULTISLOT CLASS: <class></class>
	ОК
Write Command	Response
AT+QGPCLASS= <class></class>	ОК
	If there is any error:
	ERROR
Maximum Response Time	300ms
Reference	
Quectel	

Parameter

<class></class>	GPRS multi-slot class		
	1- <u>12</u> Default value is 12		

NOTE

The command takes effect after the module is restarted.

11 TCP/IP Commands

11.1. AT+QIOPEN Start up TCP or UDP Connection

AT+QIOPEN Start up TCP or UDP	P Connection
Test Command AT+QIOPEN=?	Response +QIOPEN: (list of supported <mode>)s,(IP address range),(port) <cr><lf>+QIOPEN: (list of supported <mode>s),(domain name),(port) OK</mode></lf></cr></mode>
Write Command AT+QIOPEN=[<index>,]<mode>,<ip address>/<domain name="">,<port></port></domain></ip </mode></index>	Response If format is right, respond: OK Otherwise respond: ERROR If the connection has already existed, respond: ALREADY CONNECT And then if connection is successful, respond: [<index>,] CONNECT OK Otherwise respond: [<index>,] CONNECT FAIL</index></index>
Maximum Response Time	75s, determined by network.
Reference Quectel	

Parameter

<index> A numeric indicates which socket opens the connection. MC60 supports at most 6 sockets at the same time. This parameter is necessary only if AT+QIMUX was set as 1

	(refer to A	T+QIMUX). When AT+QIMUX was set as 0, the parameter MUST be	
	omitted		
<mode></mode>	A string par	ameter which indicates the connection type	
	"TCP"	Establish a TCP connection	
	"UDP"	Establish a UDP connection	
<ip address=""></ip>	A string parameter that gives the address of the remote server in dotted decimal style.		
<port></port>	The port of the remote server		
	0-65535		
	A		

<domain name> A string parameter which represents the domain name address of the remote server

NOTES

- This command is allowed to establish a TCP/UDP connection only when the state is IP INITIAL, IP STATUS or IP CLOSE. So it is necessary to process AT+QIDEACT or AT+QICLOSE before establishing a TCP/UDP connection with this command when the state is not IP INITIAL, IP STATUS or IP CLOSE.
- 2. If **AT+QIMUX** was set as 0 and the current state is CONNECT OK, which means the connection channel is used, it will reply **ALREADY CONNECT** after issuing the Write Command.

11.2. AT+QISEND Send Data through TCP or UDP Connection

AT+QISEND Send Data through TCP or UDP Connection		
Test Command	Response	
AT+QISEND=?	+QISEND: <length></length>	
	ОК	
Execution Command	Response	
AT+QISEND	This command is used to send changeable length data.	
response"> ", then type data to send,	If connection is not established or disconnected:	
tap CTRL+Z to send, tap ESC to cancel	ERROR	
the operation		
	If sending succeeds:	
	SEND OK	
	If sending fails:	
	SEND FAIL	
Write Command	Response	
1) When AT+QIMUX=0	This command is used to send fixed-length data or send data	
AT+QISEND= <length></length>	on the given socket (defined by <index></index>).	
2) When AT+QIMUX=1	If connection is not established or disconnected:	
AT+QISEND= <index>[,<length>]</length></index>	ERROR	

	If sending succeeds:
	SEND OK
	If sending fails:
	SEND FAIL
Maximum Response Time	300ms
Reference	
Quectel	

<index></index>	The index of the socket for sending data. This parameter is necessary only if AT+QIMUX
	was set as 1 (refer to AT+QIMUX). When AT+QIMUX was set as 0, the parameter MUST
	be omitted
<length></length>	A numeric parameter which indicates the length of data to be sent, it MUST be less than
	1460

NOTES

1. This command is used to send data on the TCP or UDP connection that has been established already. 'Ctrl+Z' is used as a termination symbol. ESC is used to cancel sending data.

- 2. The maximum length of the data to input at a time is 1460.
- 3. There are at most 1460 bytes that can be sent each time.
- 4. Only send data at the status of connection, otherwise respond with **ERROR**.
- 5. SEND OK means the data have been put into the send window to send rather than it has received the ACK message for the data from the remote node. To check whether the data has been sent to the remote node, it is necessary to execute the command **AT+QISACK** to query it.

11.3. AT+QICLOSE Close TCP or UDP Connection

AT+QICLOSE Close TCP or UDP Connection		
Test Command	Response	
AT+QICLOSE=?	ОК	
Execution Command	Response	
AT+QICLOSE	If close succeeds:	
	CLOSE OK	
	If close fails:	
	ERROR	
Write Command	Response	

AT+QICLOSE= <index></index>	If close succeeds:
	<index>, CLOSE OK</index>
	If close fails:
	ERROR
Maximum Response Time	300ms
Reference	
Quectel	

<index> The index of the socket for sending data. This parameter is necessary only if AT+QIMUX was set as 1 (refer to AT+QIMUX). When AT+QIMUX was set as 0, the parameter MUST be omitted

NOTES

- 1. Execution Command **AT+QICLOSE**:
 - If **QISRVC** is 1 (please refer to **AT+QISRVC**) and **QIMUX** is 0 (please refer to **AT+QIMUX**), this command will close the connection in which the module is used as a client.
 - If **QISRVC** is 1 and **QIMUX** is 1, it will return **ERROR**.
 - If **QISRVC** is 2, **QIMUX** equals 0, the module is used as a server and some clients have been connected to it, this command will close the connection between the module and the remote client.
 - If **QISRVC** is 2, **QIMUX** is 0 and the module is in listening state without any client, this command will cause the module to quit the listening state.
 - If **QISRVC** is 2, **QIMUX** is 1 and the module is used as a server, this command will close all the income connection and cause the module to quit the listening state.
- 2. Write Command AT+QICLOSE=<index>:
 - This command is valid only if **QIMUX** is 1.
 - If **QISRVC** is 1 and **QIMUX** is 1, this command will close the corresponding connection according to **<index>** and the module is used as a client in the connection.
 - If QISRVC is 2 and QIMUX is 1, this command will close the incoming connection according to <index>.
- If QISRVC is 1 and QIMUX is 0, AT+QICLOSE only closes the connection when the status is CONNECTING or CONNECT OK, otherwise respond with ERROR. After closing the connection, the status is IP CLOSE.

11.4. AT+QIDEACT Deactivate GPRS/CSD PDP Context

AT+QIDEACT Deactivate GPRS/CSD PDP Context		
Test Command	Response	
AT+QIDEACT=?	ОК	
Execution Command	Response	
AT+QIDEACT	If close succeeds:	
	DEACT OK	
	If close fails:	
	ERROR	
Maximum Response Time	40s, determined by network.	
Reference		
Quectel		

NOTES

1. Except at the status of IP INITIAL, GPRS/CSD PDP context can be deactivated by **AT+QIDEACT**. After closing the connection, the status becomes IP INITIAL again.

2. CSD context is not supported at present.

11.5. AT+QILPORT Set Local Port

AT+QILPORT Set Local Port	
Test Command AT+QILPORT=?	Response +QILPORT: (list of supported <port>s)</port>
AITQLFUNT=:	OK
Read Command	Response
AT+QILPORT?	<mode>: <port></port></mode>
	<cr><lf><mode>: <port></port></mode></lf></cr>
	ОК
Write Command	Response
AT+QILPORT= <mode>,<port></port></mode>	OK
	If there is any error:
	ERROR
Maximum Response Time	300ms

Reference	
Quectel	

<mode></mode>	A string parameter which indicates the connection type	
	"TCP" TCP local port	
	"UDP" UDP local port	
<port></port>	0-65535 A numeric parameter which indicates the local port	

NOTE

This command is used to set the port for listening.

11.6. AT+QIREGAPP Start TCP/IP Task and Set APN, User Name and

Password

AT+QIREGAPP Start TCP/IP Tasl	and Set APN, User Name and Password
Test Command	Response
AT+QIREGAPP=?	+QIREGAPP: "APN","USER","PWD"
	ОК
Read Command	Response
AT+QIREGAPP?	+QIREGAPP: <apn>,<user name="">,<password></password></user></apn>
	ОК
Write Command	Response
AT+QIREGAPP= <apn>,<user< td=""><td>OK</td></user<></apn>	OK
name>,< password>[, <rate>]</rate>	
	If there is any error:
	ERROR
Execution Command	Response
AT+QIREGAPP	OK
	If there is any error:
	ERROR
Maximum Response Time	300ms
Reference	

Quectel

Parameter

<apre> A string parameter which indicates the GPRS access point name or the call number of CSD
<user name>A string parameter which indicates the GPRS/CSD user name
<password> A string parameter which indicates the GPRS/CSD password
<rate> The speed of data transmit for CSD

- NOTES
- 1. The write command and execution commands are valid only at the status of IP INITIAL. After operating this command, the status will become IP START.
- 2. The value of **QICSGP** (please refer to **AT+QICSGP**) defines what kind of bearer (GPRS or CSD) the parameters are used for.
- 3. CSD function and related configuration are not supported at present.

11.7. AT+QIACT Activate GPRS/CSD Context

AT+QIACT Activate GPRS/CSD Context	
Test Command	Response
AT+QIACT=?	ОК
Execution Command	Response
AT+QIACT	ОК
	If there is any error:
	ERROR
Maximum Response Time	150s, determined by network.
Reference	
Quectel	

NOTES

- AT+QIACT only activates GPRS/CSD context at the status of IP START. After operating this command, the status will become IP CONFIG. If TA accepts the activated operation, the status will become IP IND. After GPRS/CSD context is activated successfully, the status will become IP GPRSACT, and respond with OK; otherwise respond with ERROR.
- 2. CSD context is not supported at present.

11.8. AT+QILOCIP Get Local IP Address

AT+QILOCIP Get Local IP Address		
Test Command	Response	
AT+QILOCIP=?	OK	
Execution Command	Response	
AT+QILOCIP	If execution successful, respond:	
	<ip address=""></ip>	
	Otherwise respond:	
	ERROR	
Maximum Response Time	300ms	
Reference		
Quectel		

Parameter

<ip address=""></ip>	A string parameter which indicates the IP address assigned from GPRS or CSD
	network

NOTES

- 1. Only at the following status: IP GPRSACT, IP STATUS, TCP/UDP CONNECTING, CONNECT OK, IP CLOSE can get local IP address by **AT+QILOCIP**; otherwise respond **ERROR**. And if the status before executing the command is IP GPRSACT, the status will become IP STATUS after the command.
- 2. CSD function is not supported at present.

11.9. AT+QISTAT Query Current Connection Status

AT+QISTAT Query Current Connection Status	
Test Command	Response
AT+QISTAT=? Execution Command	OK Response
AT+QISTAT	When AT+QIMUX=0 , respond:
	ок
	STATE: <state></state>
	When AT+QIMUX=1, respond:

11.11. AT+QISSTAT Query the Current Server Status

AT+QISSTAT Query the Current	Server Status
Test Command AT+QISSTAT=?	Response OK
Execution Command AT+QISSTAT	Response When AT+QIMUX=0, respond: OK S: <serverstate></serverstate>
	When AT+QIMUX=1 , respond: OK

	S: <serverstate></serverstate>
	C: <index>,<mode>,<addr>,<port></port></addr></mode></index>
	Otherwise respond: ERROR
Maximum Response Time	300ms
Reference Quectel	

<serverstate></serverstate>	A string parameter to indicate the status of the connection	
	"INITIAL"	The TCP/IP stack is in idle state
	"OPENNING"	The TCP/IP stack has been registered
	"LISTENING"	Listening to server port
	"CLOSING"	Closing connection now
<index></index>	The index of the connection, the range is (0-4)	
<mode></mode>	The type of the connection	
	"TCP" TCP connection	
	"UDP" UDP connection	
<addr></addr>	The IP address of the remote	
<port></port>	The port of the remote	

11.12. AT+QIDNSCFG Configure Domain Name Server

AT+QIDNSCFG Configure Doma	in Name Server
Test Command	Response
AT+QIDNSCFG=?	ОК
Read Command	Response
AT+QIDNSCFG?	PrimaryDns: <pri_dns></pri_dns>
	SecondaryDns: <sec_dns></sec_dns>
	ОК
Write Command	Response
AT+QIDNSCFG= <pri_dns>[,<sec_dns< td=""><td>ОК</td></sec_dns<></pri_dns>	ОК
>]	
	If there is any error:
	ERROR

Maximum Response Time	300ms
Reference	
Quectel	

<pri_dns> A string parameter which indicates the IP address of the primary domain name server
<sec_dns> A string parameter which indicates the IP address of the secondary domain name server

NOTES

- 1. Because TA will negotiate to get the DNS server from GPRS/CSD network automatically when activating GPRS/CSD context, it is STRONGLY suggested to configure the DNS server at the status of IP GPRSACT, IP STATUS, CONNECT OK and IP CLOSE if it is necessary.
- 2. CSD function and configuration are not supported currently.

11.13. AT+QIDNSGIP Query the IP Address of Given Domain Name

AT+QIDNSGIP Query the IP Addr	ess of Given Domain Name
Test Command	Response

	If configured as server successfully, return: SERVER OK
	If configured as server unsuccessfully, return: CONNECT FAIL
Maximum Response Time	150s, determined by network.
Reference Quectel	

<mode></mode>	0 NOT configured as server	
	1	Configured as server
<num></num>	The number of clients that have been connected in. The range is 0~5	
<type></type>	A numeric indicates the type of the server	
	0	TCP server
	1	UDP server
<max></max>	The maximum number of clients allowed to connect in. The default value is 1. The range	
	is 1-5	

NOTES

1. Execution command configures the module as a TCP server and the maximum allowed client is 1.

2. The parameter **<max>** is excluded when **QIMUX** is 0.

11.19. AT+QICSGP Select CSD or GPRS as the Bearer

AT+QICSGP Select CSD or GPRS as the Bearer	
Test Command AT+QICSGP=?	Response +QICSGP: 0-CSD,DIAL NUMBER,USER NAME,PASSWO RD,RATE(0-3) +QICSGP: 1-GPRS,APN,USER NAME,PASSWORD OK
Read Command AT+QICSGP?	Response +QICSGP: <mode> OK</mode>
Write Command AT+QICSGP= <mode>[,(<apn>,<user name>,<password>)/(<dial number="">, <user name="">,<password>,<rate>)]</rate></password></user></dial></password></user </apn></mode>	Response OK If there is any error: ERROR
Maximum Response Time	300ms
Reference Quectel	

<mode> A numeric parameter which indicates the bearer type</mode>			ric parameter which indicates the bearer type	
		0	Set CSD as the bearer for TCP/IP connection	
		<u>1</u>	Set GPRS as the bearer for TCP/IP connection	
	GPRS parameter	'S:		
	<apn></apn>	A string	parameter which indicates the access point name	
	<user name=""></user>	A string	parameter which indicates the user name	
	<password></password>	A string	parameter which indicates the password	
	CSD parameters:	:		
	<dial number=""></dial>	dial number> A string parameter which indicates the CSD dial numbers		
	<user name=""></user>	A string parameter which indicates the CSD user name		
	<password></password>	A string parameter which indicates the CSD password		
	<rate></rate>	A numeric parameter which indicates the CSD connection rate		
		0	2400	
		1	4800	
		<u>2</u>	9600	
		3	14400	

NOTE

CSD configuration is not supported at present.

11.20. AT+QISRVC Choose Connection

AT+QISRVC Choose Connection	
Test Command	Response
AT+QISRVC=?	+QISRVC: (list of supported <connection>s)</connection>
	ОК
Read Command	Response
AT+QISRVC?	+QISRVC: <connection></connection>
	ОК
Write Command	Response
AT+QISRVC= <connection></connection>	OK
	If there is any error:

	ERROR
Maximum Response Time	300ms
Reference	
Quectel	

<connection></connection>	A numeric parameter which indicates the chosen connection	
	<u>1</u>	Choose the connection in which MS used as a client
	2	Choose the connection in which MS used as a server

NOTE

There could be two connections at one time: one connection is that MS connects with a remote server as a client; the other connection is that MS accepts a remote client as a server. Using this command to specify which connection data will be sent through.

11.21. AT+QISHOWRA Set Whether or Not to Display the Address of

Sender

AT+QISHOWRA Set Whether or I	Not to Display the Address of Sender
Test Command	Response
AT+QISHOWRA=?	+QISHOWRA: (list of supported <mode>s)</mode>
	ОК
Read Command	Response
AT+QISHOWRA?	+QISHOWRA: <mode></mode>
	ОК
Write Command	Response
AT+QISHOWRA= <mode></mode>	ОК
	If there is any error:
	ERROR
Maximum Response Time	300ms
Reference	
Quectel	

<mode></mode>	A numeric parameter which indicates whether or not to show the address (including If address in dotted decimal style of the remote end) when receiving data.	
<u>0</u> Do not show the address.		Do not show the address.
	1	Show the address; the format to show the address is like: RECV FROM:
		<ip address="">:<port></port></ip>

11.22. AT+QISCON Save TCP/IP Application Context

AT+QISCON Save TCP/IP Application Context		
Test Command AT+QISCON=?	Response OK	
Read Command AT+QISCON?	Response TA returns TCP/IP application context, which consists of the following AT command parameters. SHOW APPTCP/IP CONTEXT +QIDNSIP: <mode> +QIPROMPT:<sendprompt> +QIHEAD:<iphead> +QISHOWRA:<srip> +QICSGP:<csgp> Gprs Config APN:<apn> Gprs Config Vserld:<gusr> Gprs Config inactivityTimeout:<timeout> CSD Dial Number:<cnum> CSD Config Vserld:<cusr> CSD Config Password:<cpwd> CSD Config rate:<crate> App Tcpip Mode:<mode> In Transparent Transfer Mode Number of Retry:<nmretry> Wait Time:<waittm> Send Size:<sendsz> esc:<esc> OK</esc></sendsz></waittm></nmretry></mode></crate></cpwd></cusr></cnum></timeout></gusr></apn></csgp></srip></iphead></sendprompt></mode>	
Execution Command AT+QISCON	Response OK	
Maximum Response Time	300ms	

Reference	
Quectel	

<mode></mode>	See AT+QIDNSIP
<sendprompt></sendprompt>	See AT+QIPROMPT
<iphead></iphead>	See AT+QIHEAD
<srip></srip>	See AT+QISHOWRA
<csgp></csgp>	See AT+QICSGP
<apn></apn>	See AT+QICSGP
<gusr></gusr>	See AT+QICSGP
<gpwd></gpwd>	See AT+QICSGP
<timeout></timeout>	See AT+QICSGP
<cnum></cnum>	See AT+QICSGP
<cusr></cusr>	See AT+QICSGP
<cpwd></cpwd>	See AT+QICSGP
<crate></crate>	See AT+QICSGP

The following configurations are only for transparent transfer mode.

<nmretry></nmretry>	See AT+QITCFG
<waittm></waittm>	See AT+QITCFG
<sendsz></sendsz>	See AT+QITCFG
<esc></esc>	See AT+QITCFG

NOTES

1. The execution command makes TA save TCP/IP Application Context which consists of the following AT Command parameters; and when the system is rebooted, these parameters will be loaded automatically:

AT+QIDNSIP, AT+QIPROMPT, AT+QIHEAD, AT+QISHOWRA, AT+QICSGP, AT+QITCFG.

- 2. The execution command only save the corresponding parameters of the foreground context (refer to **AT+QIFGCNT**).
- 3. CSD configuration is not supported at present.

11.23. AT+QIMODE Select TCP/IP Transfer Mode

AT+QIMODE Select TCP/IP Trans	Select TCP/IP Transfer Mode		
Test Command	Response		
AT+QIMODE=?	+QIMODE: (list of supported <mode>s),</mode>		

	ОК
Read Command	Response
AT+QIMODE?	+QIMODE: <mode></mode>
	ОК
Write Command	Response
AT+QIMODE= <mode></mode>	ОК
	If there is any error:
	ERROR
Maximum Response Time	300ms
Reference	
Quectel	

<mode></mode>	<u>0</u>	Normal mode. In this mode, the data should be sent by the command
		AT+QISEND
	1	Transparent mode. In this mode, UART will enter data mode after TCP/UDP
		connection has been established. In data mode, all input data from UART will be
		sent to the remote end. +++ can help to switch data mode to command mode. And
		then ATO can help to switch command mode to data mode.

11.24. AT+QITCFG Configure Transparent Transfer Mode

AT+QITCFG Configure Transpare	ent Transfer Mode
Test Command AT+QITCFG=?	Response +QITCFG: (list of supported <nmretry>s),(list of supported <waittm>s),(list of supported <sendsz>s),(list of supported <esc>s) OK</esc></sendsz></waittm></nmretry>
Read Command AT+QITCFG?	Response +QITCFG: <nmretry>,<waittm>,<sendsz>,<esc> OK</esc></sendsz></waittm></nmretry>
Write Command AT+QITCFG= <nmretry>,<waittm>,< SendSz>,<esc></esc></waittm></nmretry>	Response OK If there is any error:

	ERROR
Maximum Response Time	300ms
Reference	
Quectel	

<nmretry></nmretry>	Number of times to retry to send an IP packet
<waittm></waittm>	Number of 100ms intervals to wait for serial input before sending the packet
<sendsz></sendsz>	Size in bytes of data block to be received from serial port before sending
<esc></esc>	Whether to turn on the escape sequence or not; default is TRUE

NOTES

- 1. **<WaitTm>** and **<SendSz>** are two conditions to send data packet.
- 2. Firstly, if the length of the input data from UART is greater than or equal to **<SendSz>**, the TCP/IP stack will send the data by length **<SendSz>** to the remote.
- Secondly, if the length of the input data from UART is less than <SendSz>, and the idle time keeps beyond the time defined by <WaitTm>, the TCP/IP stack will send all the data in the buffer to the remote.
- 4. This command is invalid when **AT+QIMUX=1**.

11.25. AT+QISHOWPT Control Whether or Not to Show the Protocol

Туре

AT+QISHOWPT Control Whether	or Not to Show the Protocol Type
Test Command	Response
AT+QISHOWPT=?	+QISHOWPT: (list of supported <mode>s)</mode>
	ОК
Read Command	Response
AT+QISHOWPT?	+QISHOWPT: <mode></mode>
	OK
Write Command	Response
AT+QISHOWPT= <mode></mode>	OK
	If there is any error:
	ERROR

Maximum Response Time	300ms
Reference	
Quectel	

<mode></mode>	<u>0</u>	Do not show the transport protocol type at the end of header of the received TCP/UDP data
	1	Show the transport protocol type at the end of header of the received TCP/UDP data as the following format: IPD(data length)(TCP/UDP):

Ν	0	Т	Е
	-		_

This command is invalid if **AT+QIHEAD=0**.

11.26. AT+QIMUX Control Whether or Not to Enable Multiple TCP/IP

Sessions

AT+QIMUX Control Whether or N	lot to Enable Multiple TCP/IP Sessions
Test Command	Response
AT+QIMUX=?	+QIMUX: (list of supported <mode>s)</mode>
	OK
Read Command	Response
AT+QIMUX?	+QIMUX: <mode></mode>
	ОК
Write Command	Response
AT+QIMUX= <mode></mode>	OK
	If there is any error:
	ERROR
Maximum Response Time	300ms
Reference	
Quectel	

<mode></mode>	<u>0</u>	Do not enable multiple TCP/IP sessions at the same time	
	1	Enable multiple TCP/IP sessions at the same time	

11.27. AT+QISHOWLA Control Whether or Not to Display Local IP

Address

AT+QISHOWLA Control Whether	or Not to Display Local IP Address
Test Command	Response
AT+QISHOWLA=?	+QISHOWLA: (list of supported <mode>s)</mode>
	OK
Read Command	Response
AT+QISHOWLA?	+QISHOWLA: <mode></mode>
	ОК
Write Command	Response
AT+QISHOWLA= <mode></mode>	ОК
	If there is any error:
	ERROR
Maximum Response Time	300ms
Reference	
Quectel	

Parameter

<mode></mode>	A num	A numeric parameter indicates whether or not to show the destination address before			
	receiving data.				
	0 Do not show the destination address				
	1 Show the destination address: TO:<ip address=""></ip>				

NOTE

Because MC60 can activate two GPRS contexts at the same time, i.e. MC60 can get two local IP addresses. It is necessary to point out the destination of the received data when two GPRS contexts have been activated at the same time.

11.28. AT+QIFGCNT Select a Context as Foreground Context

AT+QIFGCNT Select a Context a	s Foreground Context
Test Command	Response
AT+QIFGCNT=?	+QIFGCNT: (list of supported <id>s)</id>
	OK
Read Command	Response
AT+QIFGCNT?	+QIFGCNT: <id>,<channel></channel></id>
	ОК
Write Command	Response
AT+QIFGCNT= <id></id>	OK
	If there is any error:
	ERROR
Maximum Response Time	300ms
Reference	
Quectel	

Parameter

<id></id>	A numeric indicates which context will be set as foreground context. The range is 0-1		
<channel></channel>	A num	A numeric indicates which channel is controlling the context <id></id>	
	0	VIRTUAL_UART_1	
	1	VIRTUAL_UART_2	
	2	VIRTUAL_UART_3	
	3	VIRTUAL_UART_4	
	255	The context is not controlled by any channel	

NOTE

When **CMUX** is opened, if the status of the context defined by **<id>** is not IP_INITIAL and the context is controlled by the other channel, it will return **ERROR**.

11.29. AT+QISACK Query the Data Information for Sending

AT+QISACK Query the Data Information for Sending	
Test Command	Response
AT+QISACK=?	ОК
Execution Command	Response
AT+QISACK	+QISACK: <sent>, <acked>, <nacked></nacked></acked></sent>
	ОК
Write Command	Response
AT+QISACK= <n></n>	+QISACK: <sent>, <acked>, <nacked></nacked></acked></sent>
	ОК
Maximum Response Time	300ms
Reference	
Quectel	

Parameter

<n></n>	The index for querying the connection
<sent></sent>	A numeric indicates the total length of the data that has been sent through the session
<acked></acked>	A numeric indicates the total length of the data that has been acknowledged by the remote
<nacked></nacked>	A numeric indicates the total length of the data that has been sent but not acknowledged by
	the remote

NOTES

- 1. Write command is invalid when **AT+QIMUX=0**.
- This command could be affected by the command AT+QISRVC. If AT+QISRVC=1, this command is used to query the information of sending data during the session in which MC60 serves as a client. If AT+QISRVC=2, this command is used to query the data information for sending during the session in which MC60 serves as a server.

11.30. AT+QINDI Set the Method to Handle Received TCP/IP Data

AT+QINDI Set the Method to Handle Received TCP/IP Data		
Test Command	Response	
AT+QINDI=?	+QINDI: (list of supported <m>s)</m>	

	ОК
Read Command	Response
AT+QINDI?	+QINDI: <m></m>
	ОК
Write Command	Response
AT+QINDI= <m></m>	ОК
	If there is any error:
	ERROR
Maximum Response Time	300ms
Reference	
Quectel	

<m></m>	A numeric indicates how the mode handles the received data
	<u>0</u> Output the received data through UART directly. In the case, it probably includes
	header at the beginning of a received data packet. Please refer to the commands
	AT+QIHEAD, AT+QISHOWRA, AT+QISHOWPT and AT+QISHOWLA
	1 Output a notification statement +QIRDI: <id>,<sc>,<sid> through UART. This</sid></sc></id>
	statement will be displayed only one time until all the received data from the
	connection (defined by <id>,<sc>,<sid></sid></sc></id>) have been retrieved by the command
	AT+QIRD.
	2 Output a notification statement +QIRDI: <id>,<sc>,<sid>,<num>,<len>,<tlen></tlen></len></num></sid></sc></id>
	through UART. This statement will establish a buffer for each socket, the data
	received will be saved in the buffer until it has been retrieved by the command
	AT+QIRD , sum lengths of all the buffer is no more than 400K.
<id></id>	A numeric points out which context the connection for the received data is based on.
	Please refer to the parameter <id></id> in the command AT+QIFGCNT . The range is 0-1.
<sc></sc>	A numeric points out the role of MC60 in the connection for the received data.
	 The module serves as the client of the connection The module serves as the server of the connection
<sid></sid>	
<51u>	A numeric indicates the index of the connection for the received data. The range is 0-5
	When QIMUX was set as 0 by the command AT+QIMUX=0 , this parameter will be always 0.
<num></num>	The number of packets received in the buffer.
<len></len>	The length of the current package in the buffer.
<tlen></tlen>	The sum of the length of all packages received in the buffer.

NOTES

- 1. The length of a package cannot exceed 1460 bytes. If it exceeds 1460 bytes, it may be split to two or more packages.
- 2. The sum of lengths of all packages received cannot exceed 400K bytes.

11.31. AT+QIRD Retrieve the Received TCP/IP Data

AT+QIRD Retrieve the Received	TCP/IP Data
Test Command AT+QIRD=?	Response +QIRD: (list of supported <id>s),(list of supported <sc>s),(list of supported <sid>s),(list of supported <len>s) OK</len></sid></sc></id>
Write Command AT+QIRD= <id>,<sc>,<sid>,<len></len></sid></sc></id>	Response [+QIRD: <ipaddr>:<port>,<type>,<length><cr><lf><dat a>] OK If there is any error: ERROR</dat </lf></cr></length></type></port></ipaddr>
Maximum Response Time	300ms
Reference Quectel	

<id></id>	A numeric points out which context the connection for the received data is based on.	
	Please refer to the parameter <id> in the command AT+QIFGCNT. The range is 0-1.</id>	
<sc></sc>	A numeric points out the role of MC60 in the connection for the received data	
	1 The module serves as the client of the connection	
	2 The module serves as the server of the connection	
<sid></sid>	A numeric indicates the index of the connection for the received data. The range is 0-5.	
	When AT+QIMUX=0, this parameter will be always 0.	
<len></len>	The maximum length of data to be retrieved. The range is 1-1500	
<ipaddr></ipaddr>	The address of the remote end. It is a dotted-decimal IP	
<port></port>	The port of the remote end	
<type></type>	An alpha string without quotation marks indicates the transport protocol type	
	TCP the transport protocol is TCP	

	UDP the transport protocol is UDP	
<length></length>	The real length of the retrieved data	
<data></data>	The retrieved data	

NOTES

- 1. <id>, <sc> and <sid> are the same as the parameters in the statement +QIRDI: <id>,<sc>,<sid>.
- 2. If it replies only **OK** for the write command, it means there is no received data in the buffer of the connection.

11.32. AT+QISDE Control Whether or Not to Echo the Data for QISEND

AT+QISDE Control Whether or N	ot to Echo the Data for QISEND
Test Command	Response
AT+QISDE=?	+QISDE: (list of supported <m>s)</m>
	ОК
Read Command	Response
AT+QISDE?	+QISDE: <m></m>
	ОК
Write Command	Response
AT+QISDE= <m></m>	ОК
	If there is any error:
	ERROR
Maximum Response Time	300ms
Reference	
Quectel	

<m></m>	A numeric indicates whether or not to echo the data for AT+QISEND	
	0	Do not echo the data
	<u>1</u>	Echo the data

11.33. AT+QPING Ping a Remote Server

AT+QPING Ping a Remote Server	
Test Command AT+QPING=?	Response +QPING: "HOST",(list of supported <timeout>s),(list of supported <pingnum>s) OK</pingnum></timeout>
Write Command AT+QPING=" <host>"[,[<timeout>][,<p ingnum>]]</p </timeout></host>	Response OK [+QPING: <result>[,<ipaddr>,<bytes>,<time>,<ttl>]<cr> <lf>]<cr><lf> +QPING:<finresult>[,<sent>,<rcvd>,<lost>,<min>,<max>, <avg>] If there is any error: ERROR</avg></max></min></lost></rcvd></sent></finresult></lf></cr></lf></cr></ttl></time></bytes></ipaddr></result>
Maximum Response Time	Depends on <timeout></timeout> .
Reference Quectel	

<host></host>	The host address in string style. It could be a domain name or a dotted decimal IP addre	
<timeout></timeout>		
	second. Range: 1-255. Default: 1	
<pingnum></pingnum>	A numeric indicates the maximum time of ping request. Range: 1-10. Default: 4	
<result></result>	The result of each ping request	
	0 Received the ping response from the server. In the case, it is followed by	
	", <ipaddr>,<bytes>,<time>,<ttl>"</ttl></time></bytes></ipaddr>	
	1 Timeout for the ping request. In the case, no other information follows it	
<ipaddr></ipaddr>	The IP address of the remote server. It is a dotted decimal IP	
<bytes></bytes>	The length of sending each ping request	
<time></time>	The time expended to wait for the response for the ping request. Unit: ms	
<ttl></ttl>	The value of time to live of the response packet for the ping request	
<finresult></finresult>	The final result of the command	
	2 It is finished normally. It is successful to activate GPRS and find the host. In the	
	case, it is followed by " ,<sent>,<rcvd>,<lost>,<min>,<max>,<avg>"</avg></max></min></lost></rcvd></sent>	
	3 The TCP/IP stack is busy now. In the case, no other information follows it	
	4 Do NOT find the host. In the case, no other information follows it	

	5 Failed to activate PDP context. In the case, no other information follows it
<sent></sent>	Total number of sending the ping requests
<rcvd></rcvd>	Total number of the ping requests that received the response
<lost></lost>	Total number of the ping requests that were timeout
<min></min>	The minimum response time. Unit: ms
<max></max>	The maximum response time. Unit: ms
<avg></avg>	The average response time. Unit: ms

11.34. AT+QNTP Synchronize the Local Time via NTP

AT+QNTP Synchronize the Local Time Via NTP		
Test Command AT+QNTP=?	Response +QNTP: "SERVER",(list of supported <port>s) OK</port>	
Read Command AT+QNTP?	Response +QNTP: " <server>",<port> OK</port></server>	
Execution Command AT+QNTP	Response OK +QNTP: <result></result>	
Write Command AT+QNTP=" <server>"[,<port>]</port></server>	Response OK +QNTP: <result> If there is any error: ERROR</result>	
Maximum Response Time	120s, determined by network.	
Reference Quectel		

<server></server>	The address of the Time Server in string style. It could be a domain name or a dotted
	decimal IP address
<port></port>	The port of the Time Server
<result></result>	The result of time synchronization

0)	Successfully synchronize the local time
1		Failed to synchronize the local time because of unknown reason
2		Failed to receive the response from the Time Server
3	5	The TCP/IP stack is busy now
4		Do Not find the Time Server
5	;	Failed to activate PDP context

NOTE

The factory Time Server is the National Time Service Centre of China whose address is "210.72.145.44" and the port is 123.

11.35. AT+QIKALIVE Set TCP/IP Keep Alive Parameter

AT+QIKALIVE Set TCP/IP Keep A	Nive Parameter
Test Command	Response
AT+QIKALIVE=?	+QIKALIVE: (list of supported <switch>s)[,(list of supported</switch>
	<idle_value>s),(list of supported <interval_value>s)]</interval_value></idle_value>
	ОК
Read Command	Response
AT+QIKALIVE?	+QIKALIVE: <switch>,<idle_value>,<interval_value></interval_value></idle_value></switch>
	OK
Write Command	Response

	4	Fax
	7	All telephony except SMS
	8	Short message service
	16	Data circuit sync
	32	Data circuit async
<time></time>	130	When "no reply" (<reads>=no reply) is enabled or queried, this gives the time in</reads>
	seconds to wait before call is forwarded, default value is 20	
<status></status>	0	Not active
	1	Active

Example

AT+CCFC=0,3,"15021012496"	<pre>//Register the destination number for unconditional call forwarding (CFU)</pre>
OK AT+CCFC=0,2 +CCFC: 1,1,"+8615021012496",145	//Query the status of CFU without specifying <class></class>
+CCFC: 1,4,"+8615021012496",145	

+CCFC: 1,32,"+8615021012496",145	
+CCFC: 1,16,"+8615021012496",145	
ок	
AT+CCFC=0,4	//Erase the registered CFU destination number
ОК	
AT+CCFC=0,2	//Query the status, no destination number
+CCFC: 0,7	
ОК	

12.2. AT+CCUG Closed User Group Control

AT+CCUG Closed User Group C	ontrol
Test Command AT+CCUG=?	Response OK
Read Command AT+CCUG?	Response +CCUG: <n>,<info> OK</info></n>
Write Command AT+CCUG=[<n>][,<index>[,<info>]]</info></index></n>	Response TA sets the closed user group supplementary service parameters as a default adjustment for all following calls. OK If there is any error related to ME functionality: +CME ERROR: <err></err>
Maximum Response Time	300ms
Reference GSM 07.07	

<n></n>	<u>0</u>	Disable CUG
	1	Enable CUG
<index></index>	<u>0</u> 9	CUG index
	10	No index (preferred CUG taken from subscriber data)
<info></info>	<u>0</u>	Bo information
	1	Suppress OA (Outgoing Access)

2	Suppress preferential CUG
3	Suppress OA and preferential CUG

12.3. AT+CCWA Call Waiting Control

AT+CCWA Call Waiting Control	
Test Command AT+CCWA=?	Response +CCWA: (list of supported <n>s)</n>
Read Command AT+CCWA?	Response +CCWA: <n></n>
Write Command AT+CCWA=[<n>][,<mode>[,<class>]]</class></mode></n>	Response TA controls the call waiting supplementary service. Activation, deactivation and status query are supported. If <mode></mode> <2 and command successful: OK If <mode></mode> =2 and command successful: +CCWA: < status> , <class1></class1> [<cr></cr> < LF> + CCWA: < status> , < class2> []] OK If there is any error related to ME functionality: +CME ERROR: <err></err>
Maximum Response Time	300ms
Reference GSM 07.07	

<n></n>	<u>0</u>	Disable presentation of an unsolicited result code
	1	Enable presentation of an unsolicited result code
<mode></mode>	When <mode> parameter is not given, network is not interrogated</mode>	
	0	Disable
	1	Enable
	2	Query status

	2 4	Data (bearer service) Fax (facsimile)
	16	Data circuit sync
	32	Data circuit async
<status></status>	0	Disable
	1	Enable

NOTES

- 1. **<status>**=0 should be returned only if service is not active for any **<class>** i.e. **+CCWA: 0, 7** will be returned in this case.
- 2. When **<mode>**=2, all active call waiting classes will be reported. In this mode the command is available by pressing any key.
- 3. Unsolicited result code

When the presentation call waiting at the TA is enabled (and call waiting is enabled) and a terminating call set up during an established call, an unsolicited result code is returned:

+CCWA: <number>,<type>,<class>[,<alpha>]

<number></number>	Phone number in string type of calling address in format specified by <type></type>	
<type></type>	Type of address octet in integer format	
	129 Unknow	n type (IDSN format number)
	145 Internat	ional number type (ISDN format)
<alpha></alpha>	Optional string ty	pe alphanumeric representation of <number></number> corresponding to the
	entry found in ph	one book

Example

AT+CCWA=1,1	//Enable presentation of an unsolicited result code
ОК	
ATD10086;	//Establish a call
OK	
+CCWA: "02154450293",129,1	//Indication of a call that has been waiting

12.4. AT+CHLD Call Hold and Multiparty

AT+CHLD Call Hold and Multiparty	
Test Command	Response
AT+CHLD=?	+CHLD: (list of supported <n>s)</n>

	ОК
Write Command	Response
AT+CHLD=[<n>]</n>	TA controls the supplementary services call hold, multiparty and explicit call transfer. Calls can be put on hold, recovered, released, added to conversation and transferred. OK If there is any error related to ME functionality: +CME ERROR: <err></err>
Maximum Response Time	300ms
Reference GSM 07.07	

<n></n>	0	Terminate all held calls or UDUB (User Determined User Busy) for a waiting call. If
		a call is waiting, terminate the waiting call. Otherwise, terminate all held calls (if any)
	1	Terminate all active calls (if any) and accept the other call (waiting call or held
		call). It cannot terminate active call if there is only one call
	1X	Terminate the specific call number X (X=1-7)(active, waiting or held)
	2	Place all active calls on hold (if any) and accept the other call (waiting call or held
		call) as the active call
	2X	Place all active calls except call X (X=1-7) on hold
	3	Add the held call to the active calls

NOTE

Example

These supplementary services are only available to the teleservice 11 (Speech: Telephony).

Example	
ATD10086;	//Establish a call
ОК	
+CCWA: "02154450293",129,1	//Indication of a call that has been waiting
AT+CHLD=2	//Place the active call on hold and accept the waiting call as
	the active call
ОК	
AT+CLCC	
+CLCC: 1,0,1,0,0,"10086",129,""	//The first call on hold

+CLCC: 2,1,0,0,0,"02154450293",129,""	//The second call becomes active
OK AT+CHLD=21 OK	//Place the active call except call X=1 on hold
AT+CLCC +CLCC: 1,0,0,0,0,"10086",129,""	//The first call becomes active
+CLCC: 2,1,1,0,1,"02154450293",129,""	//The second call on hold
OK AT+CHLD=3	<pre>//Add a held call to the active calls in order to set up a conference (multiparty) call</pre>
OK <mark>AT+CLCC</mark> +CLCC: 1,0,0,0,1,"10086",129,""	comoronoo (maniparty) oan
+CLCC: 2,1,0,0,1,"02154450293",129,""	
ОК	

12.5. AT+CLIP Calling Line Identification Presentation

AT+CLIP Calling Line Identificati	on Presentation
Test Command	Response
AT+CLIP=?	+CLIP: (list of supported <n>s)</n>
	ОК
Read Command	Response
AT+CLIP?	+CLIP: <n>,<m></m></n>
	ОК
Write Command	Response
AT+CLIP=[<n>]</n>	TA enables or disables the presentation of the calling line
	identity (CLI) at the TE. It has no effect on the execution of the
	supplementary service CLIP in the network.
	ОК
	If there is any error related to ME functionality:
	+CME ERROR: <err></err>

Maximum Response Time	15s, determined by network.
Reference GSM 07.07	
0010101.01	

<n></n>	<u>0</u>	Suppress unsolicited result codes
	1	Display unsolicited result codes
<m></m>	0	CLIP not provisioned
	1	CLIP provisioned
	2	Unknown

Unsolicited result code

When the presentation of the CLI at the TE is enabled (and calling subscriber allows), an unsolicited result code is returned after every RING (or **+CRING: <type>**) at a mobile terminating call.

+CLIP: <number< th=""><th>er>, <typ< th=""><th>e>,"",,<alphald>,<cli validity=""></cli></alphald></th></typ<></th></number<>	er>, <typ< th=""><th>e>,"",,<alphald>,<cli validity=""></cli></alphald></th></typ<>	e>,"",, <alphald>,<cli validity=""></cli></alphald>	
Parameters			
<number></number>	Phone number in string type of calling address in format specified by <type></type>		
<type></type>	<type> Type of address octet in integer format;</type>		
	129	Unknown type (IDSN format number)	
	145	International number type (ISDN format)	
<alphald></alphald>	String t	type alphanumeric representation of <number></number> corresponding to the entry found	
	in phor	ne book	
<cli validity=""></cli>	0	CLI valid	
	1	CLI has been withheld by the originator	
	2	CLI is not available due to interworking problems or limitations of originating	
		network	

Example

AT+CPBW=1,"02151082965",129,"QUECTEL" OK AT+CLIP=1 OK RING +CLIP: "02151082965",129,"",,"",0

12.6. AT+QCLIP Control Whether or Not to Show the Name of Incoming

Call Number

AT+QCLIP Control Whether or N	ot to Show the Name of Incoming Call Number
Test Command	Response
AT+QCLIP=?	+QCLIP: (list of supported <n>s)</n>
	ОК
Read Command	Response
AT+QCLIP?	+QCLIP: <n></n>
	ОК
Write Command	Response
AT+QCLIP= <n></n>	ОК
	If there is any error related to ME functionality:
	+CME ERROR: <err></err>
Maximum Response Time	300ms
Reference	
Quectel	

Parameter

<n></n>	Enable or disable the function of show the name of incoming call number		
	<u>0</u>	Enable	
	1	Disable	

NOTE

This AT command should be used in conjunction with **CLIP** command.

Example

```
AT+CPBW=1,"02151082965",129,"QUECTEL"
OK
AT+QCLIP=1
OK
AT+CLIP=1
OK
```

RING

+CLIP: "02151082965",129,"",,"QUECTEL",0

12.7. AT+CLIR Calling Line Identification Restriction

AT+CLIR Calling Line Identificat	ion Restriction
Test Command	Response
AT+CLIR=?	+CLIR: (list of supported <n>s)</n>
	ок
Read Command	Response
AT+CLIR?	+CLIR: <n>,<m></m></n>
	ок
Write Command	Response
AT+CLIR=[<n>]</n>	TA restricts or enables the presentation of the calling line identity (CLI) to the called party when originating a call. The command overrides the CLIR subscription (default is restricted or allowed) when temporary mode is provisioned as a default adjustment for all following outgoing calls. This adjustment can be revoked by using the opposite Command. OK If there is any error related to ME functionality: +CME ERROR: <err></err>
Maximum Response Time	15s, determined by network
Reference GSM 07.07	

<n></n>	(Parameter sets the adjustment for outgoing calls)		
	<u>0</u>	Presentation indicator is used according to the subscription of the CLIR service	
	1	CLIR invocation	
	2	CLIR suppression	
<m></m>	(Param	neter shows the subscriber CLIR service status in the network)	
	0	CLIR not provisioned	
	1	CLIR provisioned in permanent mode	
	2	Unknown (e.g. no network, etc.)	
	3	CLIR temporary mode presentation restricted	

4

CLIR temporary mode presentation allowed

12.8. AT+COLP Connected Line Identification Presentation

AT+COLP Connected Line Identification Presentation	
Test Command	Response
AT+COLP=?	+COLP: (list of supported <n>s)</n>
	ОК
Read Command	Response
AT+COLP?	+COLP: <n>,<m></m></n>
	OK
Write Command	Response
AT+COLP=[<n>]</n>	TA enables or disables the presentation of the COL
	(Connected Line) at the TE for a mobile originating a call. It
	has no effect on the execution of the supplementary service
	COLR in the network.
	Intermediate result code is returned from TA to TE before any
	+CR or V.25ter responses.
	ОК
Maximum Response Time	15s, determined by network.
Reference	
GSM 07.07	

<n></n>	(Parameter sets/shows the result code presentation status in the TA)		
	0 Disable		
	1 Enable		
<m></m>	(Parameter shows the subscriber COLP service status in the network)		
	0 COLP not provisioned		
	1 COLP provisioned		
	2 Unknown (e.g. no network, etc.)		

NOTE

Intermediate result code

When enabled (and called subscriber allows), an intermediate result code is returned before any +CR or V.25ter responses:

+COLP: <number>,<type>[,<subaddr>,<satype> [,<alpha>]]</alpha></satype></subaddr></type></number>		
Parameters		
<number></number>	Phone number in string type, format specified by <type></type>	
<type></type>	Type of address octet in integer format	
	129 Unknown type (IDSN format number)	
	145 International number type (ISDN format)	
<subaddr></subaddr>	String type sub-address of format specified by <satype></satype>	
<satype></satype>	Type of sub-address octet in integer format (refer to GSM 04.08 sub clause 10.5.4.8)	
<alpha></alpha>	Optional string type alphanumeric representation of <number> corresponding to the entry</number>	
	found in phone book	

Example

```
AT+CPBW=1,"02151082965",129,"QUECTEL"
OK
AT+COLP=1
OK
ATD02151082965;
+COLP: "02151082965",129,"",0,""
```

13 Audio Commands

13.1. ATL Set Monitor Speaker Loudness

ATL Set Monitor Speaker Loudness	
Execution Command ATL <value></value>	Response OK
Maximum Response Time	300ms
Reference V.25ter	

Parameter

<value></value>	0	Low speaker volume	
	1	Low speaker volume	
	2	Medium speaker volume	
	3	High speaker volume	

NOTE

The two commands **ATL** and **ATM** are implemented only for V.25 compatibility reasons and have no effect.

13.2. ATM Set Monitor Speaker Mode

ATM Set Monitor Speaker Mode		
Execution Command	Response	
ATM <value></value>	OK	
Maximum Response Time	300ms	
Reference		
V.25ter		

<value></value>	0	Speaker is always off
	1	Speaker is on until TA informs TE that the carrier has been detected
	2	Speaker is always on when TA is off-hook

NOTE

The two commands **ATL** and **ATM** are implemented only for V.25 compatibility reasons and have no effect.

13.3. AT+VTD Tone Duration

AT+VTD Tone Duration	
Test Command AT+VTD=?	Response +VTD: (list of supported <internalduration>s)[,(list of supported <duration>s)] OK</duration></internalduration>
Read Command AT+VTD?	Response +VTD: <internalduration>,<duration> OK</duration></internalduration>
Write Command AT+VTD= <internalduration>[,<duratio n>]</duratio </internalduration>	Response This command refers to an integer <internalduration></internalduration> that defines the length of tones emitted as a result of the +VTS command. This does not affect the D command. OK
Maximum Response Time	300ms
Reference GSM 07.07	

<internalduration></internalduration>	<u>1</u> -255	Duration between two tones, unit is 100ms
<duration></duration>	<u>0</u>	Do not set duration of every single tone.
	1-100000	Duration of every single tone, unit is 1ms

13.4. AT+VTS DTMF and Tone Generation

AT+VTS DTMF and Tone Generation		
Test Command AT+VTS=?	Response +VTS: (list of supported <dtmf>s), ,(list of supported <duration>s) OK</duration></dtmf>	
Write Command AT+VTS= <dtmf-string></dtmf-string>	Response This command allows the transmission of DTMF tones and arbitrary tones in voice mode. These tones may be used (for example) when announcing the start of a recording period. OK If there is any error related to ME functionality: +CME ERROR: <err></err>	
Maximum Response Time	Depends on the length of <dtmf-string></dtmf-string> .	
Reference GSM 07.07		

Parameter

<dtmf-string></dtmf-string>	It has a max length of 20 characters, must be entered between double quotes (" ") and consists of combinations of the following separated by commas. But a single character does not require quotes	
	1) <dtmf></dtmf>	A single ASCII characters in the set 0-9 , # , *, A-D . This is interpreted as a sequence of DTMF tones whose duration is set by the AT+VTD command
	2) { <dtmf>, <duration>}</duration></dtmf>	This is interpreted as a DTMF tone whose duration is determined by <duration></duration>
<duration></duration>	Duration of the tone, unit:	100ms, range: 1-255

Example

ATD10086;	//Establish a call
ОК	
AT+VTS=1	//Send a single DTMF tone according to the prompts of voice
ОК

14.1. AT+CCLK Clock

AT+CCLK Clock	
Test Command	Response
AT+CCLK=?	ОК
Read Command	Response
AT+CCLK?	+CCLK: <time></time>
	ОК
Write Command	Response
AT+CCLK= <time></time>	OK
	If there is any error related to ME functionality:
	+CME ERROR: <err></err>
Maximum Response Time	300ms
Reference	
GSM 07.07	

Parameter

<time> String type value; format is "yy/MM/dd,hh:mm:ss±zz", where characters indicate year (two last digits),month, day, hour, minutes, seconds and time zone (indicates the difference, expressed in quarters of an hour, between the local time and GMT; range -47...+48). E.g. May 6th, 1994, 22:10:00 GMT+2 hours equals to "94/05/06,22:10:00+08"

Example

AT+CCLK?

//Query the local time

+CCLK: "08/01/04, 00:19:43+00"

ок

14.2. AT+QALARM Set Alarm

AT+QALARM Set Alarm	
Test Command	Response
AT+QALARM=?	+QALARM: (list of supported <state>s),<time>,(list of supported <repeat>s),(list of supported <power>s)</power></repeat></time></state>
	ОК
Write Command	Response
AT+QALARM= <state>,<time>,<repeat< td=""><td>ОК</td></repeat<></time></state>	ОК
>, <power></power>	
	If there is any error:
	ERROR
	+CME ERROR: <err></err>
Maximum Response Time	300ms
Reference	
Quectel	

Parameter

<state></state>	An integer parameter which indicates whether or not to enable alarm			
	0 Clear alarm			
	1 Set alarm			
<time></time>	A string parameter which indicates the time when an alarm arises. The format is			
	"yy/MM/dd,hh:mm:ss±zz" where characters indicate the last two digits of year, month, day			
	hour, minute, second and time zone. The time zone is expressed in quarters of an hour			
	between the local time and GMT, ranging from -47 to +48			
<repeat></repeat>	An integer parameter which indicates the repeat mode			
	0 None			
	1 Daily			
	2 Weekly			
	3 Monthly			
<power></power>	An integer parameter which indicates the method of controlling power when alarm arises			
	0 None. Only send "ALARM RING" to serial port			
	1 Alarm power off. Send "ALARM RING" to serial port and power off in 5 seconds			
	2 Alarm power on. Send "ALARM MODE" to serial port and enter into alarm mode			

NOTE

In alarm mode, protocol stack and (U)SIM protocol are closed, only a few AT commands can be executed, and system will be powered down after 90 seconds, if neither power key is pressed nor functionality is changed to full functionality. If power key is pressed, system will be powered down immediately.

14.3. AT+CBC Battery Charge

AT+CBC Battery Charge	
Test Command AT+CBC=?	Response +CBC: (list of supported <bcs>s),(list of supported <bcl>s),(voltage) OK</bcl></bcs>
Execution Command AT+CBC	Response +CBC: <bcs>, <bcl>,<voltage> OK If there is any error related to ME functionality: +CME ERROR: <err></err></voltage></bcl></bcs>
Maximum Response Time Reference GSM 07.07	300ms

Parameter

<bcs></bcs>	Battery charge status	
	0	ME is not charging
	1	ME is charging
	2	Charging has finished
<bcl></bcl>	Battery charge level	
	0100	Battery has 0-100 percent of capacity remaining vent
<voltage></voltage>	Battery voltage (mV)	

NOTE

As MC60 doesn't support battery charge, **<bcs>** and **<bcl>** are invalid while the **<voltage>** still represents the correct voltage of VBATT.

14.4. AT+QADC Read ADC

AT+QADC Read ADC	
Test Command	Response
AT+QADC=?	+QADC: (list of supported <status>s),(list of supported</status>
	<value>s)</value>

	ОК
Execution Command	Response
AT+QADC?	+QADC: <status>,<value></value></status>

<status></status>	Status	
	0	Fail
	2	Success
<value></value>	0-2800	Voltage

14.5. AT+QSCLK Configure Slow Clock

AT+QSCLK Configure Slow Cloc	k
Test Command	Response
AT+QSCLK=?	+QSCLK: (list of supported <n>s)</n>
	ОК
Read Command	Response
AT+QSCLK?	+QSCLK: <n></n>
	ОК
Write Command	Response
AT+QSCLK= <n></n>	OK
Maximum Response Time	300ms
Reference	
Quectel	

Parameter

<n></n>	<u>0</u>	Disable slow clock
	1	Enable slow clock, and it is controlled by DTR
	2	When there is no data on serial port in 5 seconds, module will enter into sleep

mode. Otherwise, it will exit from sleep mode.

NOTE

In mode 2, the first UART data that the module received in sleep mode will be discarded as it is used to wake up the module. It's suggested to send an extra AT command to wake up the module first, and then continue to send other commands.

14.6. AT+QLEDMODE Configure the Network Indication LED Patterns

AT+QLEDMODE Configure the N	etwork Indication LED Patterns
Test Command	Response
AT+QLEDMODE=?	+QLEDMODE: (list of supported <ledmode>s)</ledmode>
	OK
Read Command	Response
AT+QLEDMODE?	+QLEDMODE: <ledmode></ledmode>
	ОК
Write Command	Response
AT+QLEDMODE= <ledmode></ledmode>	ОК
	If there is any error related to ME functionality:
	+CME ERROR: <err></err>
Maximum Response Time	300ms
Reference	
Quectel	

Parameter

<ledmode></ledmode>	0	Network Indication LED flashes rapidly when a call is ringing
	<u>1</u>	No effect on the Network Indication LED when a call is ringing
	2	No effect on the Network Indication LED when a call is ringing, and RI will not
		change when URC reported until the ringing ends

NOTE

Please restart the module after the command is set.

14.7. AT+QVBATT Configure the Threshold of Voltage

AT+QVBATT Configure the Three	shold of Voltage
Test Command AT+QVBATT=?	Response +QVBATT: 0,(3451-3600),(0,1) +QVBATT: 1,(3100-3450),(0,1) +QVBATT: 2,(4300-4550),(0,1) +QVBATT: 3,(4551-4730),(0,1) OK
Read Command AT+QVBATT?	Response +QVBATT: 0, <threshold>,<state> +QVBATT: 1,<threshold>,<state> +QVBATT: 2,<threshold>,<state> +QVBATT: 3,<threshold>,<state></state></threshold></state></threshold></state></threshold></state></threshold>
Write Command AT+QVBATT= <threshold_type>[,<thr eshold>[,<state>]]</state></thr </threshold_type>	Response If format is right, response OK Else if <threshold> is omitted and <threshold_type> is legal, this command is used to query the value of the corresponding parameter, and response +QVBATT: <threshold_type>,<threshold>,<state> OK If there is any error related to ME functionality: +CME ERROR: <err></err></state></threshold></threshold_type></threshold_type></threshold>
Maximum Response Time	300ms
Reference Quectel	

Parameter

<threshold_type></threshold_type>	Туре	Type of configuring voltage threshold.		
	0	The threshold of low voltage warning		
	1	The threshold of low voltage power down		
	2	The threshold of high voltage warning		
	3	The threshold of high voltage power down		
<threshold></threshold>	Volta	ge threshold. Unit: mV		

<state></state>	The co	rresponding function of <threshold_type></threshold_type> parameter is enabled/disabled.
	The default low voltage warning and low voltage power down function is enabled.	
	The defa	ault high voltage warning and high voltage power down function is disabled
	0	The function is disabled
	1	The function is enabled

NOTES

- When the battery voltage reaches the setting threshold, reported the URC as follows: UNDER_VOLTAGE WARNING UNDER_VOLTAGE POWER DOWN OVER_VOLTAGE WARNING OVER_VOLTAGE POWER DOWN
- 2. This command can be saved by **AT&W**.

Example

AT+QVBATT=? +QVBATT: 0,(3451-3600),(0,1) +QVBATT: 1,(3100-3450),(0,1) +QVBATT: 2,(4300-4550),(0,1) +QVBATT: 3,(4551-4730),(0,1)	//Test command, query threshold setting range
OK	
AT+QVBATT? +QVBATT: 0,3500,1	//Read command
+QVBATT: 1,3100,1	
+QVBATT: 2,4500,0	
+QVBATT: 3,4600,0	
ок	
AT+QVBATT=0,3490 OK	//Set the low voltagel warning voltage as 3490mV
AT+QVBATT=0	//Query the low voltage warning threshold and state
+QVBATT: 0,3490,1	//0 is the function type of the low voltage warning; 3490 is the threshold of the low voltage warning; 1 means that the function of the low voltage power warning is enabled.
OK	
AT+QVBATT=1,3300,0 OK	//The functon of the low voltagel power off is disabled.
AT+QVBATT=1	//Query the threshold of the low voltage power off and the state
+QVBATT: 1,3300,0	//1 means the function type of the low voltage power off;

3300 is the threshold of the low voltage power off; 0 means that the function of low voltage power off is disabled.

14.8. AT+QTEMP Query the Current Voltage and Temperature

AT+QTEMP Query the Current Voltage and Temperature	
Test Command AT+QTEMP=?	Response +QTEMP: (list of supported <mode>s),(list of supported < tick>s),(list of supported <count>s) OK</count></mode>
Read Command AT+QTEMP?	Response +QTEMP: <mode>,<voltage>,<temperature> OK</temperature></voltage></mode>
Write Command AT+QTEMP= <mode>[,<tick>,<count>]</count></tick></mode>	Response If <mode>=1 and command successful: OK If <mode>=2 and command successful: OK +QTEMP: <mode>,<voltage>,<temperature> If there is any error related to ME functionality: +CME ERROR: <err></err></temperature></voltage></mode></mode></mode>
Maximum Response Time	300ms
Reference	

Parameter

<mode></mode>	0	Disable
	1	Enable
	2	Sample and report circularly
<tick></tick>	1- <u>40</u> -65535	Sampling period, only takes effect when <mode>=2</mode>
<count></count>	<u>1</u> -254	Sampling times, only takes effect when <mode>=2</mode>
<voltage></voltage>	The current vol	tage of the temperature sensitive resistor (mV)

<temperature> The current temperature of the temperature sensitive resistor

NOTES

- 1. When **<tick>** and **<count>** are omitted, their default values will be used if they haven't been set yet; otherwise their previous values will be used.
- 2. URC interval time is approximately equal to <count>*(<tick>*4.615 + 6) milliseconds when **<mode>**=2.

14.9. AT+QMSDC Mount/Unmount an External SD Card

AT+QMSDC Mount/Unmount an I	External SD Card
Test Command	Response
AT+QMSDC=?	+QMSDC: <mode></mode>
	ОК
Write Command	Response
AT+QMSDC= <mode></mode>	ОК
	If there is any error related to ME functionality: +CME ERROR: <err></err>
Maximum Response Time	300ms
Reference	

Parameter

<mode></mode>	Number format. Indicate the status of an external SD card.		
	0	Unmount	
	1	Mount	

NOTE

The configuration of this command will take effect immediately and will not be saved after power off.

ОК	

15.2. ATE Set Command Echo Mode

ATE Set Command Echo Mode	
Execution Command ATE[<value>]</value>	Response This setting determines whether or not the TA echoes characters received from TE during command state. OK
Maximum Response Time	300ms
V.25ter	

<value></value>	0	Echo mode off
	<u>1</u>	Echo mode on

15.3. ATS3 Set Command Line Termination Character

ATS3 Set Command Line Termination Character		
Read Command	Response	
ATS3?	<n></n>	
	ОК	
Write Command	Response	
ATS3= <n></n>	This parameter setting determines the character recognized	
	by TA to terminate an incoming command line. The TA also	
	returns this character in output.	
	ОК	
Maximum Response Time	300ms	
Reference		
V.25ter		

Parameter

<n> 0-<u>13</u>-127 Command line termination character (Default 13=<CR>)

15.4. ATS4 Set Response Formatting Character

ATS4 Set Response Formatting Character		
Read Command ATS4?	Response	
	ОК	
Write Command ATS4= <n></n>	Response This parameter setting determines the character generated by the TA for result code and information text. OK	
Maximum Response Time	300ms	

Reference	
V.25ter	

<n>

0-<u>10</u>-127

Response formatting character (Default 10=<LF>)

15.5. ATS5 Set Command Line Editing Character

ATS5 Set Command Line Editing Character		
Read Command	Response	
ATS5?	<n></n>	
	ОК	
Write Command	Response	
ATS5= <n></n>	This parameter setting determines the character recognized	
	by TA as a request to delete the immediately preceding	
	character from the command line.	
	ОК	
Maximum Response Time	300ms	
Reference		
V.25ter		

Parameter

<n> 0-<u>8</u>-127 Response editing character (Default 8=<Backspace>)

15.6. AT+QRIMODE Set RI Time

AT+QRIMODE Set RI Time	
Test Command	Response
AT+QRIMODE=?	+QRIMODE: (list of supported <timemode>s)</timemode>
	ок
Read Command	Response
AT+QRIMODE?	+QRIMODE: <timemode></timemode>

	ок
Write Command	Response
AT+QRIMODE= <timemode></timemode>	ОК
	If there is any error related to ME functionality: +CME ERROR: <err></err>
Maximum Response Time	300ms
Reference	
Quectel	

<timemode></timemode>	Time mode
	<u>0</u> 120ms low pulse for RI when receiving SMS or other URCs
	1 120ms low pulse for RI when receiving SMS; 50ms low pulse when
	receiving other URCs
	2 When a new SMS is received, RI changes to LOW and holds low level for
	120ms; when other URCs are received, it takes no effect on RI

15.7. AT+QCFG="RFTXburst" Burst Transition Signal Indication

AT+QCFG="RFTXburst" Burst Transition Signal Indication		
Read Command AT+QCFG="RFTXburst"	Response +QCFG: "RFTXburst", <indmode> OK</indmode>	
Write Command	Response	
AT+QCFG="RFTXburst", <indmode></indmode>	OK If there is any error related to ME functionality: +CME ERROR: <err></err>	
Maximum Response Time	300ms	
Reference Quectel		

Parameter

<indmode></indmode>	Burst transition signal indication through GPIO line.	
	<u>0</u> Disable TX burst indication. The pin output LOW level as GPIO function.	

- 1 Enable TX burst indication. The output wave as notes
- 2 Enable TX burst indication. The pin will be HIGH during a call and the pin will become LOW after the call is released.

NOTES

- 1. This AT command will be saved by **AT&W**.
- 2. Below is the output wave of **<indmode>=1**:

15	+CGREG:0, <lac><ci></ci></lac>	Network unregistered, with location code	AT+CGREG=2
16	+QCGTIND	A CS voice call, CS data, fax call or GPRS session termination indicator	AT+QCGTIND=1
17	+CSQN: <rssi>,<ber></ber></rssi>	Signal quality change	AT+QEXTUNSOL ="SQ",1
18	+FPLMN: <status></status>	Forbidden network is available only	AT+QEXTUNSOL ="FN",1
19	+CMWT: <store>,<index>,<voic e>,<fax>,<email>,<other></other></email></fax></voic </index></store>	Message waiting	AT+QEXTUNSOL ="MW",1
20	+QGURC: <event></event>	Unsolicited result code follows particular call state transition	AT+QEXTUNSOL ="UR",1
21	+CBCN <bcs>,<bcl></bcl></bcs>	Display battery connection status and battery charge level	AT+QEXTUNSOL ="BC",1
22	+QBAND: <band></band>	Band mode display	AT+QEXTUNSOL ="BM",1
23	+TSMSINFO: <cms error="" info=""></cms>	Additional SMS information	AT+QEXTUNSOL ="SM",1

24	+CCINFO: <call is<br="">Disconnected>,<remain calls=""></remain></call>	Displays the disconnected call ID and the remain call numbers after one of the call is disconnected	AT+QEXTUNSOL ="CC",1
25	RING	Indicates incoming call	N/A
26	Call Ready	Device is ready to make/receive calls	N/A
27	UNDER_VOLTAGE POWER DOWN	Under voltage shutdown indication	N/A
28	UNDER_VOLTAGE WARNING	Under voltage warning	N/A
29	OVER_VOLTAGE POWER DOWN	Over voltage shutdown indication	N/A
30	OVER_VOLTAGE WARNING	Over voltage warning	N/A
31	NORMAL POWER DOWN	Normal power down	N/A
32	+COLP: <number>,<type>[,<su baddr>,<satype>[CLI validity]],</satype></su </type></number>	The presentation of the COL(connected line) at the TE for a mobile originated call	AT+COLP=1
33	+CLIP: <number>,<type>"",,<al phaID>,<cli validity=""></cli></al </type></number>	Mobile terminating call indication	AT+CLIP=1
34	+CRING: <type></type>	An incoming call is indicated to the TE with unsolicited result code instead of the normal RING	AT+CRC=1
35	+CREG: <stat></stat>	Indicate registration status of the ME	AT+CREG=1
36	+CREG: <stat>[,<lac>,<ci>]</ci></lac></stat>	After cell neighborhood changing shows whether the network has currently indicated the registration of the ME, with location area code	AT+CREG=2
37	+CCWA: <number>,<type>,<cla ss>[,<alpha>]</alpha></cla </type></number>	Call waiting indication	AT+CCWA=1,1
38	RDY	ME initialization is successful	N/A
39	+CFUN:1	All function of the ME is available	N/A
40	+CPIN: <state></state>	SIM card pin state	N/A
41	MO RING	MO call ringing	AT+QMOSTAT=1
42	MO CONNECTED	MO call connected	AT+QMOSTAT=1
43	ALARM RING	Alarm event is triggered	AT+QALARM=1, <t ime>,<repeat>,0/1</repeat></t

44 ALARM MODE

ME is switched on by alarm

AT+QALARM=1,<t ime>,<repeat>,2

16.7. Summary of CME ERROR Codes

Final result code **+CME ERROR: <err>** indicates an error related to mobile equipment or network. The operation is similar to **ERROR** result code. None of the following commands in the same command line is executed. Neither **ERROR** nor **OK** result code shall be returned.

<err> values are mostly used by common message commands. The following table lists most of general and GRPS related **ERROR** Codes. For some GSM protocol failure cause described in GSM specifications, the corresponding **ERROR** codes are not included.

Code of <err></err>	Meaning
0	Phone failure
1	No connection to phone
2	Phone-adaptor link reserved
3	Operation not allowed
4	Operation not supported
5	PH-SIM PIN required
6	PH-FSIM PIN required
7	PH-FSIM PUK required
8	PH_SIM_PUK_REQUIRED
10	(U)SIM not inserted
11	(U)SIM PIN required
12	(U)SIM PUK required
13	(U)SIM failure
14	(U)SIM busy

Table 10: Different Coding Schemes of +CME ERROR: <err>

15	(U)SIM wrong
16	Incorrect password
17	(U)SIM PIN2 required
18	(U)SIM PUK2 required
20	Memory full
21	Invalid index
22	Not found
23	Memory failure
24	Text string too long
25	Invalid characters in text string
26	Dial string too long
27	Invalid characters in dial string
30	No network service
31	Network timeout
32	Network not allowed - emergency calls only
40	Network personalization PIN required
41	Network personalization PUK required
42	Network subset personalization PIN required
43	Network subset personalization PUK required
44	Service provider personalization PIN required
45	Service provider personalization PUK required
46	Corporate personalization PIN required
47	Corporate personalization PUK required
48	Long dial-number storage is full
100	Unknow

103	Illegal MS
106	Illegal ME
107	GPRS services not allowed
111	PLMN not allowed
112	Location area not allowed
113	Roaming not allowed in this location area
132	Service option not supported
133	Requested service option not subscribed
134	Service option temporarily out of order
148	Unspecified GPRS error
149	PDP authentication failure
150	Invalid mobile class
151	Link NS SP person PIN required
152	Link NS SP person PUK required
153	Link SIM C person PIN required
154	Link SIM C person PUK required
302	Command conflict
600	No Error
601	Unrecognized command
602	Return error
603	Syntax error
604	Unspecified
605	Data transfer already
606	Action already
607	Not AT command

608	Multi command too long
609	Abort COPS
610	No call disconnect
3513	Unread records on SIM
3515	PS busy
3516	Couldn't read SMS parameters from SIM
3517	SM not ready
3518	Invalid parameter
3519	Incomplete concatenate SMS
3738	CSCS mode not found
3742	CPOL operation format wrong
3765	Invalid input value
3769	Unable to get control
3771	Call setup in progress
3772	(U)SIM powered down
3773	Invalid CFUN state
3774	Invalid ARFCN
3775	The pin is not in GPIO mode
3777	Invalid sms character
3778	The length of SMS is zero
3779	No enough length for sc
3780	Incorrect data length
3790	Empty destination address
3791	Call is in progress

16.8. Summary of CMS ERROR Codes

Final result code **+CMS ERROR: <err>** indicates an error related to mobile equipment or network. The operation is similar to ERROR result code. None of the following commands in the same command line is executed. Neither **ERROR** nor **OK** result code shall be returned.

<err> values are mostly used by common message commands:

Table 11: Different Coding Schemes of +CMS ERROR: <err>

Code of <err></err>	Meaning
300	ME failure
301	SMS ME reserved
302	Operation not allowed
303	Operation not supported
304	Invalid PDU mode
305	Invalid text mode
310	(U)SIM not inserted
311	(U)SIM pin necessary
312	PH (U)SIM pin necessary
313	(U)SIM failure
314	(U)SIM busy
315	(U)SIM wrong
316	(U)SIM PUK required
317	(U)SIM PIN2 required
318	(U)SIM PUK2 required
320	Memory failure
321	Invalid memory index

322	Memory full
330	SMSC address unknown
331	No network
332	Network timeout
500	Unknown
512	(U)SIM not ready
513	Message length exceeds
514	Invalid request parameters
515	ME storage failure
517	Invalid service mode
528	More message to send state error
529	MO SMS is not allow
530	GPRS is suspended
531	ME storage full
3513	Unread records on SIM
3515	PS busy
3516	Couldn't read SMS parameters from SIM
3517	SM not ready
3518	Invalid parameter
3742	Incorrect <oper> format</oper>
3765	Invalid input value
3769	Unable to get control of required module
3771	Call setup in progress
3772	(U)SIM powered down
3773	Unable to operate in this CFUN state

3774	Invalid ARFCN in this band
3775	The pin is not in GPIO mode

16.9. Summary of Cause for Extended Error Report

16.9.1. Location ID for the Extended Error Report

ID	Description
0	No error (default)
1	Cause for protocol stack (PS) layer
2	Internal cause for Mobility Management (MM) layer
3	Cause for PPP/IP-Stack

16.9.2. Cause for Protocol Stack (PS) Layer

Table 13: Cause for Protocol Stack (PS) Layer

Cause	Description
CM Cause	
0	Radio link fail
1	Unassigned number
3	No route to destination
6	Channel unacceptable
8	Operator determined barring
10	Call barred
11	Reserved

16	Normal call clearing
17	User busy
18	No user responding
19	User alerting, no answer
21	Call rejected
22	Number changed
25	Pre-emption
26	Non-selected user clearing
27	Destination out of order
28	Invalid number format (incomplete number)
29	Facility rejected
30	Response to STATUS ENQUIRY
31	Normal, unspecified
34	No circuit/channel available
38	Network out of order
41	Temporary failure
42	Switching equipment congestion
43	Access information discarded
44	Requested circuit/channel not available
47	Resource unavailable, unspecified
49	Quality of service unavailable
50	Requested facility not subscribed
55	Incoming calls barred within the CUG

16.9.3. Internal Cause for MM Layer

Table 14: Internal Cause for MM Layer

Cause	Description
112	Forbidden PLMN
113	Access class barred
114	No coverage

115	GPRS service not allowed
116	Timer expiry
117	(U)SIM inserted
118	(U)SIM removed
119	(U)SIM absent
120	(U)SIM invalid for PS
121	(U)SIM invalid for CS
122	(U)SIM invalid for PS and CS
123	Low layer fail
124	Connection in progress
125	Not updated
126	Connection establish failure
127	Connection abort
128	Connection failure
129	Emergency not allowed
130	No GPRS coverage
131	Abnormal LU
132	Abnormal LU less than 4 times
133	Same LAI IMSI attaching

16.9.4. Cause for PPP/IP-Stack

Table 15: Cause for PPP/IP-Stack

Cause	Description
0	No error
1	LCP fail

2	Authentication fail
3	IPCP fail
4	ESC detect
5	Plug out detect
6	PPP GPRS dialup already activated
7	PPP not activated by external modem yet
8	PPP already activated by external modem
9	PPP not activated by WAP over CSD yet
10	PPP already activated by WAP over CSD
11	PPP wrong CSD mode ID
12	PPP detect AT command during dialup
13	PPP detect escape during dialup
